3492. Sony XR-CA620X shortwave car stereo...cd changer compatibility? Antenna? Cell phone conversations?

Newsgroup: rec.radio.shortwave
Date: 2005-03-20 15:20:45 UTC
From: STONECREED <vze1nksx@verizon.net>

Source record: 13025

Hi,

I just won a new in box Sony XR-CA620X Xplod shortwave car stereo unit on ebay. I want to buy a CD changer but I'm not sure what units are compatible. Will it work with any Sony cd changer?

Next, I was planning to use my regular whip car antenna. Does anyone recommend replacing the antenna with a better one for SW reception?

Finally, Some nutcase told me you can pickup cell phone conversations with the XR-CA620X. Is that true? I can't be or is it?

Thanks any responses to this posting in answering these questions.
Peace.

John in Boston

Yeah, but Sirius is a subscription service. This means that, in order to take advantage of their services, you have to give them *money* on a regular basis.

Here's another side to the environmentally sound wind power option.
California has several wind power 'farms' that contribute to our power
grid; recently these were attacked by animal lovers as they 'pose a
hazard to birds'! That's right, a group of avian rights crusaders
(can't remember which fringe element this was - we seem to have so
many fringe elements in California it would be a full time job to
maintain the list) decided to not only stand in the way of new
wind-farms but to challenge those that exist as endangered birds could
fly into the blades and meet an untimely death. This might be funny -
if it weren't true.

Yeah, at least in the near term. But further out, when everyone has wristwatch size, secure encrypted digital satellite two-way receivers (hey, I can dream, can't I? :-o), I don't imagine there will be too many utilities and Mossad numbers stations on "Shortwave" as we know it now!

Jim

I've often wondered about this, actually, especially in connection with the military. The great thing about HF is its simplicity. With very little in the way of equipment, you can send a message to someone halfway around the world. You don't need the ability to put satellites into orbit, the ability to run cables underneath the ocean, or any other highly complex systems or enormous pieces of 'infrastructrure'. I suppose we could "bet" that our access to or ability to utilize all of this infrastructure will never be compromised; but I, for one, would not want to make this bet.

That's just what I was thinking about, concerning the transformers. I understand the concept of the input stage determining the system NF.....for a MW loopstick, this doesn't seem to be an issue, especially with a tuned circuit that has a loopstick with a measured Q of 400.....I am using ferrite material that has a permeability of 900. Anyway, a source follower had a voltage gain of approximately 0.95, so there shouldn't really be any noise of any magnitude inserted into the system. There is, however quite a bit of current gain; this is good when driving a lower impedance load such as a MMIC. This link should provide some insight: http://www.qrp.pops.net/probe1.htm
This person has some example schematics.
This is also a good link (PDF file): www.analogzone.com/hft_0930.pdf
Since I am using a very low value source resistor, about 62 ohms, this should be the main contributing factor as far as noise voltage is concerned. The MMBF5486 has a 3dB to begin with, so once again, I don't believe noise to be an issue here.
I can make some NF measurements to verify this, but as you say, the differential mode seems to be the way to go, especially with a good JFET pair. I do have some Siliconix E431 and U430 dual JFETs on hand, but since I have less than 30 of each it wouldn't make any sense to build anything unless it was a one-of custom project. Ulrich Rohde has a good design example in his communications receiver design book.

The only noise that there should be here is antenna noise.

Thus you should start with
> a gain stage. Now this is where I don't know what Wellbrook does. For
> low noise, you want a single ended input stage (one less elemen to

> contribute to the noise). For the loop to work, it has to float about
> ground as you don't want the antenna to be the loop relative to ground,
> i.e. you want the loop to be the antenna. Thus Wellbrook puts in a
> differential to single ended converter, aka the transformer.

This is how they achieve their very high IP2 and IP3 specifications. A good way to go, but after a certain input level, the ferrite material will become saturated. Now, if they are using the type of material that is used in the broadband transformers in transmitter output stages, that is a different story.

Now what I
> don't know is the turns ratio of the transformer. Are they picking the
> turns ratio fo impedance matching? Is the goal voltage gain?

I am not sure about this myself. Dale, W4OP would understand this one.
>
> I don't think the Wellbrook is complicated in terms of the number of
> components, but it requires good planning to make a low noise amp that
> works with the loop.

I have seen a couple of designs that use an op-amp at the front end. I have thought about using an AD797 as the input stage. With a 30 volt bipolar supply, dynamic range could be very good since you would have approximately 28 volts of swing at the output stage.

The manual is wrong. This has been known for years. You can change or delete any of the presets. There are two frequency lists preset in the radio. One is for radios sold in NA and the other for Europe. I don't remember the sequence of events that cause the switch but it happens. There are two ways of getting the factory default settings (NA) back. Either manually reprogram it or send it back to the factory.

This may be of help. It's not that complicated and could be put together in a short time. If you build two, the time taken for each will be greatly reduced. A small preprinted project board could replace the printed circuit board.

http://www.min.at/OE1RIB/CAT/Default.htm

The printed circuit board resembles the solderless one pictured here, at least for shape and size.

http://members.axion.net/~rduff/rcxprototype.jpg

You would stick the components through the holes and solder. this plastic board allows you to transfer the components directly from the prototyping board shown above. It has the same connections/routes as the spring loaded solderless version shown above.

3516. Zim jams private radio station

Newsgroup: rec.radio.shortwave
Date: 2005-03-20 18:19:54 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <d1kesa$j0r$1@hercules.btinternet.com>
Source record: 13047

20 March 2005

Cape Town - Zimbabwean President Robert Mugabe's government is jamming broadcasts to Zimbabwe from a London-based pro-democracy radio station, an independent media monitoring agency said on Sunday.

The Zimbabwe Media Monitoring Project (MMPZ) said the government was using sophisticated Chinese equipment to block out broadcasts from Short Wave Radio Africa, run by a group of exiled Zimbabwean press freedom activists.

The watchdog quoted a report by the Washington-based federal International Broadcasting Bureau (IBB), which said the jamming appeared to emanate from Thornhill, a military airbase and state communications centre in the central city of Gweru.

Three jammers were being used to scramble the SWRA's three shortwave frequencies, according to the IBB.

The British Broadcasting Corporations Monitoring Services also confirmed the jamming operation. "The interfering signals were present only for the period of the SWRA programming," said a spokesperson.

The station has resumed broadcasting on different frequencies.

SWRA began operating in 2001, after the supreme court abolished a state monopoly on radio services. However, it was shut down after only a few days and subsequently shifted to London. The government later passed laws to ban private radio and television stations.

For three hours daily, the station broadcasts news and editorials mostly on the country's political situation in a bid to provide an alternative to the government-controlled public press and broadcasting networks.

The three public radio stations and one television station publish blatant ruling party propaganda and racist hate speech, according to media freedom activists.

The government's jamming operations against SWRA were "a deliberate assault on the freedom of expression" and denying the public the right to information especially in the run-up to scheduled parliamentary elections on March 31, according to the MMPZ.

In total 92% of the state election coverage is positive reporting on the ruling party's campaign, while the opposition Movement for Democratic Change received only 6% of all coverage, th MMPZ said in a report last week.

The latest disruption followed earlier moves against independent media. The campaign has seen a Dutch-based radio station in Harare destroyed by a bomb

and four independent newspapers banned, including the independent Daily News which also suffered bomb attacks.

Scores of journalists, editors and media proprietors have also been arrested under press-gag laws introduced in 2002, which prescribe a sentence of up to two years for "working illegally as a journalist."

Visiting foreign correspondents have been almost totally banned, and nearly all of the country's locally-based journalists reporting for foreign media have been deported or driven out of the country.

The Zimbabwean government is among the world's 10 worst offenders against press freedom, according to the New York-based International Committee to Protect Journalists.

Shortwave radio is not going to die out completely, it's use on
Broadcast stns will be greatly reduced.

Back in the old days shortwave was probably one of the best methods to
find info on foreign countries, today you just bring up your web
browser and type in (whatver country) food+culture and out it pops
right there with photos, videos, all things that SW can't typically
bring.

It was alright, unless you know many people and/or into listening to pirate radio it is generally "empty"

I only found 2-3 fourms to be interesting, one was a fourm on rare recordings run by Myke Weiskoph, good show but far less content than from last year. Most of the other fourms seemed to be nothing more than crying about how SW is dying.

Thats why most number stations today are run by countries that lack the sophisticated defense communication sats. USA shut down its number station in 2003.

Cuba for example has been running a number station that has changed little from when it was first heard in the 1950's.

I don't know about the CD player, but the stock antenna on my
Pathfinder worked fine for SW. One time I ran some extra wire from
the antenna to the back of the vehicle with no noticeable improvement
in reception. More wire may have helped. Since selling the
Pathfinder, the stereo is now "installed" in my home shack using a
12-volt battery, bookshelf speakers, and outdoor longwire antenna.
And no, it won't receive cell phone frequencies.

I would love to know why shortwave receivers for automobiles are not
sold in the USA. Deal with the state department? Any ideas?
Thanks
CReed

I'm glad you are not a whack job but a I did read what you said and I quoted what you said in my post. We agree that the PETA position is wrong and according to the previous post we disagree on whether the PETA position is an "absolutist moral stance." They are your words I'm quoting so don't be insulting about my not reading your posts with any care.

It's on satellite, it's on the Internet. I don't think he will ever get
the fact that he's posting on a short wave radio news group.

There are people out there that others will have nothing to do with due
to their defective personalities. People that they have met avoid them
at any opportunity. I figure that people like Jim or David post here
just for some human contact. If they were in your vicinity you would
have nothing to do with them but here people do respond to them even
though all they do is annoy.

They've been sold in the past, however it would seem as though there is not much of a market for them.

I rather doubt that there is a 'deal with the State Department', but feel free to let your mind run wild with speculation.

I don't know why either.I know Shortwave Radios for cars used to be sold in U.S.A.not long ago.I was in New Orleans about ten years ago and I bought a cheapo radio for my van and I saw a sign there about Shortwave Radios (Blaupunkt Shortwave Radios) for cars and the store also installed them too.I installed my own cheapo Krayco radio in my van.

Differential pairs have more noise than a single ended design, which is why the transformer is the way to go. An ideal transformer has no noise. I real life transformer has the noise of the resistance in the windings. This is why the transformer choice isn't trivial.

If you buffer (source follow) then use an amplifier, the noise of the source follower gets amplified. This is why you wouldn't normally do any buffering before amplification if low noise was the issue. However, in the case of a tuned loop, you need the high impedance to keep the Q high. Wellbrook gets around that problem by using a loop that is not tuned. The assumption is the purchaser has a real radio and doesn't need front end filtering. So cource having a high dynamic range like the 7030 is a plus.

Loops using ferrite will not work as well as a Wellbrook IF the Wellbrook uses a large enough loop. What you are gaining with the Wellbrook is aperture. It soaks up lots of RF due to it's size.

Hi,

Interesting question and interesting answer.

Well, it's certainly changed since I got back into it in 1999 during an extremely serious back operation. I was going to be stuck in the hospital for over 2 weeks and RS had a DX-375 on sale for $70 (Canadian $$) so I bought it and listened to it in the hospital. Prior to that, it was 1972 when I last listened to shortwave. Needless to say I got hooked and had a DX-394B within a couple of months.

If I were to have that same surgery today and were not a SW listener, I don't know if I'd get into it with as much enthusiasm as I did in 1999. I doubt if I'd have a Sat-800, DX-398 and a Grundig 400PE as I do at the moment.

In a Sat-800 newsgroup, someone mentioned CB. It had never occurred to me that I could listen to CB with my Sat-800 so I decided to listen. I thought CB was totally dead, but much to my shock and surprise, it is still pretty active around here (Windsor, Ontario, Canada).

So if CB is not dead, perhaps SWL will also survive.....at least for a while -:)

No sales in the states is likely due to practically no demand rather
than any international trade laws or the state department. I bought
mine new from Jacky's a few years ago and there was no problem getting
it. DHL delivered it to my office in three or four days.

By the way, I'm sure you'll enjoy it. It's a real pleasure having a
convenient option to listen to shortwave during the commute or on a
long road trip.

For the record, David wrote the post you quoted, not me.

Anyway, it looks like I'm stuck with a) the Singapore relay or b) an FM station in San Francisco. I have dialup internet so the internet feed is not really an option, at least not until the house is finished and I get cable internet. I couldn't find program schedules on the BBC website-does anybody know when The World Today is on the Singapore relay? If that relay goes away then I'll have to break out the Tivoli Model One.

Jeez, $680 final bid... and they only went for around $250 new.

For that price you could have bought a new Icom R75 when they were still
available, and have some cash left over for optional accessories.

Naw, the other pirates are probably listening, and when one signs off, the other signs on. Of course, that's not to say that several different pirate programs are relayed by the same station.

Source record: 13201

It could be the bypass caps at the encoder inputs of the MCU, but more probable is either noisy series diodes at the Channel A and B encoder outputs or a noisy tuning encoder. Looking at mine, it appears to be a mechanical encoder vs an optical unit. Another thing to check are the bulk decoupling capacitors on the front panel display board. If the MCU isn't properly bypassed because of degraded 'lytic caps you could be experience ground bounce. It shouldn't be too bad to find, but I have had repairs in the past that have started out as "a ten minute job".

That would be my guess, but you never know...

However, if that's the case, then why the big loop on the coax? And you can see control wires for the rotator leading down from it... personally if it were me I'd have taken the rotator off. I wouldn't be surprised, though if the rotator were a TV antenna rotator and he just used the mast & rotator to mount a different antenna on. But if you were going to do that, you wouldn't need to leave such a big loop of coax.

Aperture is exactly the point I was going to get at.....this is the
reason that the receivers I have built that use the Mini-Circuits mixers as
the first stage have worked very well with an 8 foot diameter untuned loop.
No IM products anywhere in the LW/MW bands.
<miso@sushi.com> wrote in message
news:1111350392.685100.280210@f14g2000cwb.googlegroups.com...

I understand this, but take a look at the AD797, and other op-amps that are
used at very low input signal levels. This device is designed for ultrasound
transducer applications, strain gauge amplifier service, etc. There are
quite a few very low noise op-amps that are suitable for RF service.

As far as transformers, I don't think there is such a thing as an ideal
transformer. In my experience, the input Xl must be at least ten times the
impedance of the expected driving source's impedance at the lowest frequency
of interest.There is going to be a certain amount of DC resistance in the
primary winding if we are going to be able to achieve the required
inductance to provide the proper load. If we are talking about a single
turn loop that has a relatively low reactance in this application, that
would be ok.
>

> any buffering before amplification if low noise was the issue. However,
> in the case of a tuned loop, you need the high impedance to keep the Q
> high.

Exactly my point.....in the LW/MW ranges, this is not an
issue. When you are using a high Q loopstick, the output voltage out of the
secondary winding is relatively high. This is observed from my own
experience. In direct comparison with the Palomar active loopstick, my own
units have better performance in the areas of output voltage, and small
signal pickup is slightly better because of the higher selectivity of my
implementation.
For higher frequencies where the ambient noise is lower, a different
technique would be required.

Wellbrook gets around that problem by using a loop that is not
> tuned. The assumption is the purchaser has a real radio and doesn't
> need front end filtering. So cource having a high dynamic range like
> the 7030 is a plus.

That isn't such a good deal.....anybody can build that type
of antenna for relatively cheap.....the clincher is the amplifier
stage that Wellbrook uses. I would like to take a look at a schematic of
their circuit and see how they do it.

3574. The New York Times Shortwave Article

Newsgroup: rec.radio.shortwave
Date: 2005-03-20 23:21:03 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns961FBAAE22C09TheDoctorisin@216.168.3.44>
Source record: 13206

This article may be online, but I can't find it. We have the Sunday New York Times paper delivered to our home in Pittsburgh, and the following article was found in the New York Times Style Magazine, in the Sunday, March 20, 2005 edition on the final page. The article, entitled Shortwave Radio Days by Paul Theroux, extols his experience with shortwave radios, and the invaluable information that they have provided him over the years.

Once, having had his baggage stolen, he describes his effort to replace the missing items, and his priority in first replacing the shortwave. The model he owned was the Sony ICF-SW07. He says that he wouldn't take a serious trip without it.

He concludes with the following: "When I travel, it's my only electronic indulgence. A computer is a millstone, a pager is a joke and a cellphone to me is a secular form of purgatory - merely a subtle, more nagging version of the electronic ankle bracelets that perverts and felons have to wear. But a shortwave radio is instant access to the wider world. It's enlightenment, security and amusement."

Thanks to the New York Times for exposing the public to an issue that we all find so interesting.

Dr. Artaud

3582. Spectrum display for R-5000

Newsgroup: rec.radio.shortwave
Date: 2005-03-20 23:53:13 UTC
From: Brian Hill <jonnysocko@jps.net>
Message-ID: <1111362793.625742.180330@f14g2000cwb.googlegroups.com>
Source record: 13218

I'm reposting this because my server is messed up and some of you may not have seen the post.

I don't no if any of you have ever used spectrum displays as a tool for DX work but heres a freq converter I made to hook up my CEI/ WJ spectrum monitor to my R-5000. Pete KE9OA was helpful along with a few others. Thanks Pete. It's a fairly simple design useing the NE602 mixer chip. The hard part is getting the the Osc. to oscillate because its a very faint signal and a spectrum monitor would be ideal but most of us don't have one so a radio tuned to the right freq will work with a little patience. I had to swap a few differant values of caps in the Osc. circuit for it to work on the freq. I needed. The only math involved is this: If the spectrum display wants to see a 21.4mhz signal at its input and your radio has a 10.7mhz IF output you add 21.4 plus 10.7 = 32.1mhz. Get the coil and cap on pin 6 to oscillate at 32.1mhz and thats all that it needs to work. The ne602 takes the 10.7 and mixes it with the 32.1 and outputs 21.4mhz to the display. If your radio has a 45.0mhz IF, 21.4 plus 45.0 = 66.4mhz. Get the coil and cap at pin 6 to oscillate at 66.4 and you are all set. etc...

I also
have a dual 1261-S Microdyne Corp unit Im working on that will be used with
my other receivers.

Yep, he's for real. I believe he's based in Kansas. He and his sheep-uh,
followers-regularly show up in San Francisco to protest homosexuals.
"Fags hate God, God hates fags". They were at the funeral of AIDS
activist Randy Shilts with signs saying "Shilts in hell".

So, this still means you think everyone should go out
and buy an old tube radio, even if it's not a R-390?
>
> FYI, a well maintained aligned R390A in a stable environment can be
> tuned within 300 Hz of a target frequency and will drift less than
> half that figure over 24 hours.

Sorry. Not good enough...I used to get anal cuz my 830's
internal VFO drifted 40 cycles with A/C cycling off and on..
Even thats enough to require retuning of a SSB signal.
Thats why I went to the VFO-230 on the 830, which drifts nada..
My 706 will tune within 1 hz of a target frequency as far
as readout...If you count slewing error thoughout the HF
spectrum, the max error might be hummmm, 1-20 cycles depending
on the freq being used...Being I calibrate the radio at 10mhz,
and say I'm on 40 meters, the error will be under 5 cycles.
And I don't even have the hi-stab xtal...It could be
even better, if I wanted to spend a lil more $$$.
Within 300 hz of a target freq? Man, that's pitiful
for the year 2005...
Drift? If the room temp is stable, the icom has no real
drift. Not enough to ever require retuning SSB anyway.
You'll be a long ways off from me, if you drift 150 hz
in a day. Same applies to the kenwood using the external
VFO.

You may have dynamic range, but your readout and
stability are fairly lame to my standards..

>
> There ain't a $10 transistor made with the dynamic range of a tube
> designed for small signal RF amplification.

Doesn't really matter if dynamic range is not a really much
of an issue to begin with...MK

The BBC has stated for years that it intends to end shortwave broadcasts to "low priority areas". I don't know how they determine a low priority area. But they appear to be winding down all broadcasts to the Americas, so I guess we're a low priority area. As a consolation prize to the Caribbean listeners they're abandoning, they note that they have FM outlets in Jamaica and Antigua. FM only goes for about 100 miles before dying out, although it might go further over water. I suppose that's good enough to cover Jamaica, which is small, but not the ENTIRE Caribbean. Also, media freedom in Central and South America is often tightly controlled, meaning that FM has limited reach, if any. In addition to that, the nearest FM station to me that plays BBC News is in San Francisco, on the other side of a mountain range (albeit a low elevation one). Mountains tend to block FM. FM also does better in summer than winter. FM has lots of limitations that SW doesn't.

I wonder if the Chinese are providing the jamming tapes too. If so, it must be strange for the Zimbabweans to hear loud Chinese folk music on shortwave. "What's that weird noise?..."

Seriously, Mugabe and his government are in big trouble from what I've heard, and they've been pulling out all the stops in order to hang on. They've driven the remaining whites out of the country and shut down farm production resulting in food shortages. They've relentlessly persecuted anybody who might criticize Mugabe.

Unfortunately, you're right. Back in the 60s, anybody could buy a TO and listen to the Cold War raging LIVE over the radio. Today the thrill is gone. Most of the countries central to the new wars either don't have SW services, don't broadcast in English and/or can't be heard in North America on a regular basis with the English they DO broadcast. The action is all on the internet. Try entering something like "jihad" into Google and see what you come up with.

I figure that it will take something big for the situation to change,
like Bush suspending the Constitution after another big terrorist attack
and clamping down on the net and other services like satellite and FM
relays. Hey, the Nepalese never imagined that the king would cancel
democracy and put the country under his direct rule. There have been
rumors swirling for three years that after the next 9-11 martial law
will be declared and the Constitution suspended indefinitely (they'll
never say abolished, but in effect that's what will happen). All
people's digital goodies will broadcast only rap music and government
propaganda, sort of like Radio Sawa but in English. Can you imagine the
news becoming just the latest "victories in the war to defend freedom",
sort of like Voice of Korea, American style? In that case, the few who
still have shortwave radios will become necessary links to reality.
>
> Here's my RA reception report SINPO: 5,5,5,5,5! It will be the same
> an hour from now, next week and next year.

Not counting buffering due to network overload which can cut off the
signal abruptly and completely for a few seconds at a time, and signal
degradation which can make the signal sound like ball bearings rattling
around in a soup can. Yes, SW has fades and interference, but right now
the internet isn't much better, especially if you only have dialup. I
wish people would stop being so dazzled by technology and realize that
no one method of listening is superior or perfect.

I'm more familiar with the LT1028, but I took at look at the 797, which
fortunately is an easier op-amp design to follow. It does have a
differential input, but that is because it is an op-amp, which requires
such an input. However, it is worse for input noise. It should be 41%
more noise than a single ended design.[Uncorrelate noise sources add in
a RMS fashion IIRC).

The ideal transformer was just thrown out there for discussion, since
the noise source in a model of the transformer would be the resistance
of the windings.

Ah, but that is the idea! You sell the amp and people come up with
their own loops. That is also the beauty of the tuned loop in that you
don't have to know exactly what the end user is going to use.

I assume this is one of those 60s Transoceanic knockoffs. The plug could
either be an RCA type plug (which has a thick outer circle around the
plug) or a plain old earphone type plug. Describe what the plug looks
like and maybe we can tell you what to buy at Radio Shack. After you get
the right jack, all you need to do is connect some speaker wire to it
and hang the wire out a window.

I have a like new, with all the original materials and box, R-75 for sale.
it has an improved roofing filter (cuts chatter from adjacent channels) and
a murata 3kHz filter in the option 2 slot (extra selectivity option !).
a steal at only $425 plus shipping

email me at mmaghakian@yahoo.com
only a money order will be accepted for payment.

Are you using an external antenna with a decent RF ground? Not unusual to
hear encoder noise when using the atached whip and internal preamp.
Grounding the RX will eliminate this.

It was a joke, nimrod. Your posting style is damned near identical to his.
In other words, where'd you go to school? Back in the "holler" somewhere?
And just like cuhulin, you're so slow you didn't even catch the insult.

> Im not a name shifting loser troll like you

I have never posted to Usenet under any other name, and I've been around
Usenet for something like six years now. So as for the name shifting, you're
wrong. Whether or not I'm a loser is a matter of personal opinion, and
you're of course welcome to yours. As far as being a troll goes, again,
you're wrong. It would appear that you don't know what the term means. Might
I suggest you educate yourself before you start throwing ad hominems around?
I must say, though, based on the content, style, grammar and punctuation of
your posts that education is something you clearly have no interest in.

> guys are. now take this elsewhere. it hasnothing to do with these
> groups you post too.

Well, you're right there. But if I refuse? Your bullying, antagonistic
approach has done nothing but make me want to piss you off all the more.
Might I suggest you killfile me?

Hey Brian,
It looks good. It looks like you are running the chip on 5
volts. An NE602 likes to have at least 6 volts. 8 volts is ok
too.....I use a 7808 to run the chip. You might find that the chip
operates better at this higher power supply voltage.
Nice job on the design!

Pete

I didn't realize that this could happen under these conditions. I use a
Radio Shack loop antenna and it works ok on the MW band, but maybe the
antenna noise overrides this phenonemom.

Yep, it sure is. No mention of shortwave. I do hope they eventually decide to make a new receiver.

I also noticed that their product support page (http://www.rldrake.com/tech/producthelp.html) contains a reference to an R8E receiver. Any idea what that refers to? If you scroll down the list, you'll see it immediately following the R8, R8A, etc.

It was made for the European market and is an R8 sans some particular frequency range. It was made for the German market, and the regulation which forced the reduction has since been changed.

YES! I've been listening for a couple of weeks now, and both freqs.
9875 and 7325 are both coming in strong! I was just about to send an
email to my dad since RV has had features about Estonia in the past few
nights. My father's family emigrated from Estonia right after WW2, and
we had the chance to visit relatives and tour about the country last
summer. Since Radio Tallinn is an internet/FM outlet only, I hope Radio
Vilnius evolves into a voice for the All of the Baltic countries!

Bunch of JERKS so-called weather folks.They can't even predict the weather an hour or two ahead of time even with those billions of dollars worth of equipment that our taxes pay for and the tv stations get for FREE.There is a so-called weather guy (woody assaf) here in the Jackson area and he retired a few years ago.He used to always have that big metal clipboard with the hinged cover thingy on it.I reckon that JERK thought that stupid clipboard made him look like he was important or something.Back in the late 1950's or in the 1960's,he used to pull names out of one of those thingys on tv (after he had done his so-called "weather report" on tv for Sunflower foodstores.Most of them names were folks who lived in the Yazoo City area (I think the whole thing was rigged) and he would pooch up his yap and pronounce Yazoo City as Yazroo City.The Yazoo are a very proud Indian Tribe.I never! believe a word any of those so-called "weather folks" ever say! Bunch of JERKS!

CB isn't dead because some big reasons:

1) Truckers keep using it religiously

2) You don't have to pay per month to use it

3) You don't need a license (although some folks
used to have them, a long time ago)

4) The equipment can be easily found (used
or new)

5) Nothing has really replaced it's niche; sure, you
can use a cell phone or satellite radio or the Net, but
for an old fashioned "party line" type of experience,
nothing has replaced it yet.

Why would anyone "re-enter" a dying market. Receivers have dropped out of
the market as fast as the broadcasters.

Face facts: HF usage by broadcasters, commerical users, govt, military is
just about over. Someone get a gun and put this horse out of its misery.

Enjoy the bands (HF and MW) while you can, there won't be much left to
listen to in the next decade or so.

And there will be Cingular and Verizon wanting a buck
a pop for each message sent and for each moment of
usage. Once the kids today grow up and discover
that a cell phone doesn't mean freedom but the ability
for someone at work to call you 24x7, they might not
like those blackberrys and cells so much.

It would be easier just to get a model number off the radio. If it has the 88-108 Mhz FM band it dates from after 1945, because that's when that band was implemented. If it has the 42-50 Mhz FM band then it is quite rare, since that band was only used for a few years prior to World War 2. However, I doubt this is the case, since there probably weren't ever any 42 Mhz band FM stations in Mississippi. Anyway, get a model number and you can find out the year from that, just ask around in rec.antiques.radio+phono.

To find out much about it you will need the model number.

I have my eye on a 1930's floor model radio sitting in the rafters of a relative's garage. I put the model number and makers name into a google search and came up with a ton of info. The mahogany is still beautiful, it has a tuning eye and internal rotatable antenna. All I gotta find is the room.

What are you smokin? Theres more radios out there than any other time in history of mankind and with Ebay and the internet the market is saturated. Drake and others have sold a bazillion of em to everybody, well the market has slowed. Bi deal! Every major radio co. has quit building radios at one time or another. And mankind will continue to use the HF spectrum until long after were dead. Do us a favor and put yourself out of your own misery.

The radio is sitting right there on one of the bench shelves in his garage/shop/shed.I could have easily looked up the model number and whatever else information that is on the radio.But,that doesn't matter to me.I will let him know today it might be a rare radio,if in fact it is.I have known him since 1954 and we went to the same school.He was in the Navy and I was in the Army.Rare radio or not,that matter does not mean anything at all to him or me.He collects old antique Railroad things and he knows the value of things like that,to be sure! If he sells me the radio,he will name his price and I will pay him the money and the radio will sit in my living room till the day I croak.

No I use a whip antenna and no ground connection.
Is it neccesary to connect RX to ground? I have no good ground connection in
my flat.
So it is normal with noise from the tuning knob if I don't have connetion to
ground?

You could try and see if you can get 550 kHz, KOAC out of Corvallis
Oregon. OPB relays the the BBC starting fairly early at night. 10 or
11 PM weekdays.

>I couldn't find program schedules on the BBC
>website-does anybody know when The World Today is on the Singapore
>relay?

You go to the World Service home page. About two thirds of the way
down where there's a box for the schedules with a form/popup for city.
Tell them that your location is someplace over there, like Manila.
Then hit the button to go to the schedule pages. I find the whole
week printable versions the easiest to use.

It'll all get screwed up in the next week or so. Last change, they shifted
some programs two hours UTC.

Several amateur reports following initial discovery Friday UTC by a ham in Los Angeles. I haven't heard it yet, but there are .wavs. It seems to come and go on a possible diurnal schedule. Same DSB databurst every 40 seconds, new (clipped and unintelligible) voice. Propagation and other amateur reports, including from the NM people, suggest the same origin (the MATIC contract facility in NM, where military radios are tested over varying terrain on the Laguna Pueblo Reservation). Thanks, guys, for all this info.

Some of my old radios make a raspy.skritticy noise when I tune the dial knob and or the on/off/volume control knob.Sometimes I squirt a little dab of tuner cleaner stuff (or even WD-40) from a spray can and the noise stops for a while.I don't know that much,but I do not believe it is normal for any radios to make any noises that are abnormal when tuning the dial knobs or the on/off/volume control knobs.I could be mistaken though.I do definetly know WD-40 works great for my old arthritis fingers.

Saw your references to, but not the article itself. I can relate to the guy having said he takes his radio with him. If I'm going on any serious sojourn, it's one of the first things I think of having with me. Darren http://www.geocities.com/apocalyptic121/index.html

Interesting. It must be a copycat Sam.

Steve

3681. Radio Origins topic from March 13, Thanks to those who responded!

Newsgroup: rec.radio.shortwave
Date: 2005-03-22 00:01:06 UTC
From: benjimallicoat@hotmail.com
Message-ID: <1111449666.687024.35980@o13g2000cwo.googlegroups.com>
Source record: 13118

I would like to thank those who responded to my question regarding radio origins in the US. To the people calling me lazy for not doing my own research, you may be interested to know this paper was written in two parts. One was discussing the topic of the question. The other was analyzing the validity of human resources in groups like this one (Google) and other resources such as Allexperts.com on the internet. I don't blame the people calling me an imbecile and lazy, when all I needed to do was a Google search. Please understand part of my research was evaluating your responses. Thank you very much for your help, and I apologize for misleading you in any way. The information from those who answered was certainly used and greatly appreciated. Thanks again.

Sincerely, Benji Mallicoat

Well,if it's fed govt stuff,y'all know how that goes.If it's Yosemite Sam,they probally told him,Good Boy! now go do it again.It's cloudy outside here,(my little doggy had me out there a few minutes ago,she took a pee) light clouds,I could see the big old Moon up there in the Eastern sky at what I reckon is at about a fifty something percent angle. (I am not good at guessing angles) It is not raining here in Jackson,Mississippi,, yet and there is no breeze at ground level here,,, yet.So where is the big weather event that lieing ass so-called "weather reporter" JERKOFF PHONEY was saying is going to happen in the ArkLaTex region today? cuhulin

cuhulin, he's talking about quoting from the post that you're responding to, just as in this post I've included what you had to say. It makes the conversations much, much easier to follow. That way, whenever you make a comment or a statement people know just who it's directed towards. It's a simple common courtesy.

Well I could have saved you a lot of analysis.

Here you will find opinions. Only a few take the time to quote a recognized authority.
Or even know who the recognized authorities are.

An opinion is a belief stronger than impression and less strong than positive knowledge.

Translated - people quote some fuzzy recollections, what a friend thinks, what grandpa said, and frequently make things up.

Even books are frequently wrong or presumptive.

Your real answer should have been from recognized authorities and their aren't any here.

Bottom line -- Caveat Lector

Compared to say Europe, where they are?
Shortwave carries over the borders. Most 'national' i.e.
local radio in Europe is now FM with limited range.

Often you want to hear radio from the next country or
your own country/language before passing the border station
or inside the other country.

The U.S. is a large square block with no neighbouring countries
that people drive to. Local radio in local language is
preferred, and there is not the polyglot of Europe.

You might want to hear overseas, but probably only in English,
while Europeans want to hear non-English.
See for example, Radio Danube and other such tourist season
stations in their own sets of languages for tourists.

I'm not aware of radio-from-home stations for drivers in the U.S.

I wonder if it's some sort of test transmission. Apparently MATIC does work on military radio systems. The Yosemite Sam clip could be an inside joke (after all, it's the military's JOB to "blow ya to smithereens" as they did to Fallujah). The databurst could be meant to test the effectiveness of the radios at receiving data transmissions. It's apparently a government sanctioned operation, but I doubt it has anything to do with spying, as MATIC apparently is not in the business of doing regular transmissions for stuff like spy work.

HF Utility logs
6 Mar - 22 Mar 2005
All times UTC, all frequencies in KHZ

3292 - Cuban YL/SS w/ 5F msg at 0200, xmitter having problems, sounded like it was being sent in DSB rather than AM.

3782 - CTP, Oeiras Naval, Portugal, in RTTY 75/850 at 0203 w/ NAWS tape.

4007 - NNN0QU in USB at 0131 conducting MARS net.

4018.5 - AAA7IA in Sitor-B at 0208 conducting MARS net.

4037 - AAR7AL in PSK31 at 0207 conducting MARS training net.

4038.5 - NNN0ANX in USB at 0221 w/ informal MARS net.

4116 - Speech-inversion scrambling in USB at 0222.

4232 - RFLIE in RTTY 75/850 w/ RY test tape at 0136.

4271 - CFH in RTTY 75/850 at 0138 w/ coded meteo.

4271 - CFH in FAX at 0214 w/ WX charts.

4318 - NMG at 0146 w/ WEFAX charts for Gulf of Mexico & Carribean.

4450 - AFF5C in USB at 0204 conducting MARS net.

6930 - YL/EE Mossad stn in USB at 2227 rpting SYN2.

6959//10426 - Lincolnshire Poacher YL/EE numbers stn in USB at 2230 w/ 5F msg.

10162 - 037RMRCAP, unid CAP stn sounding in ALE at 2204. 033NHQCAP sounding at 2222.

10535 - CFH, Halifax CG radio at 1527 w/ FAX WX charts for North Atlantic.

10714 - Cuban CW cut # stn w/ 5F msg at 0202.

10945 - CFH, Halifax CG radio in RTTY 75/850 w/ NAWS tape at 1843.

11205 - 'Halifax Military' in USB at 2113 passing WX to _____ 320.

11226 - 'Reach 264' in USB at 1904 calling Mainsail w/ no answer.

11330 - 'New York' ATC in USB at 2213 wking 'Delta 524 w/ posn rpt & selcall check.

12119 - Cuban 5F CW cut # msg at 0115.

12215 - Cuban YL/SS 5F msg in AM at 0200.

12585 - WLO in Sitor-B at 1605 w/ info bulletin & traffic list.

12825 - CTP, Oieras Naval, Portugal, passing NAWS tape in RTTY 75/850 at 0058.

12840.5 - PBC, Goeree Is Naval, Denmark, in RTTY 75/850 at 2303 w/ CARB tape.

12857 - 6WW, Dakar Naval, Senegal, in RTTY 75/850 at 0100 w/ RY & "VOYEZ LE BRICK" test tape.

13031.2 - RFLIE in RTTY 75/850 at 1904 w/ RY test tape.

13110 - WLO in USB at 1900 w/ automated YL voice passing info bulletin & traffic list.

13170 - 'Olympia Radio' in USB at 2310 w/ Voice marker announcement in EE & Greek.

13330 - 'New York' LDOC in USB at 1943 wking unid a/c, asked if they wanted NY to relay info to
Houston.

13436 - Empty carrier at 0100, then at 0114 Cuban YL/SS came on in middle of msg.

13510 - CFH, Halifax CG radio in RTTY 75/850 at 1427 w/ coded meteo & plaintext WX. Also WEFAX
charts for North Atlantic at 1540.

Receivers: Icom R75, AKD Target HF3M, Kenwood TS-140S

Al, Christians have used this section of Peter to "prove" that the last days are upon us and that the "scoffers" need to repent RIGHT NOW or else burn with "fervent heat" for centuries. And generation after generation, century after century, for over a thousand years, the scoffers have been proven right, and there has been no fiery end to the earth, no second coming of Jesus. Where is the end that Christians have been so certain is coming RIGHT NOW, have been certain of it for centuries, have pointed to signs that they say fulfill the promises of the Bible as a portent that the end is HERE, and each time they have crashed into the concrete wall of reality, yet like a cartoon character they pop back into shape and ram themselves yet again into the wall, saying the end is here, and for 2000 years they have been disappointed. Give up already! Jesus said that the end was coming in the lifetimes of the people who listened to him speak, yet they all died without seeing it, and the verse was reinterpreted to mean the current generation, and the generations have passed and passed and a thousand generations have passed, all of them certain that they would see the end, and all of them have been disappointed, and all of them have taken their last breath and said as their last words "the end is here" yet the end has never showed up. And you too Al will say the end is here as you take your last breath, and you too will be disappointed, and so will the generations that come after you. Talk about a vicious killer meme! It's time to put this meme to rest, and realize that the end is NOT coming. Guys like you wanted to start a nuclear war so that the end would come, and thankfully you didn't.

At this very moment here in Jackson,Mississippi,the Sky over Jackson is crystal clear with bright Stars overhead,the bright Moon is almost straight up in the Sky and there is no wind and Rain.I am about 200 miles Southeast of Texarkana,Texas/Texarkana/Arkansas (I know a married woman who lives in Texarkana,Texas (Subrina is her name) and she works at a nursing home in Texarkana,Texas (ArkLaTex region) and I Know what the Weather in Texarkana,Texas is like right now,ArkLaTex region.That Phoney so-called "weather" person is going to once again
Prove,today,March 21,2005 that they do NOT! know a damn thing about the Weather or predicting the Weather either.Sure,I know it is raining in some parts of the ArkLaTex region right now,but it is no major weather event,so far tonight yet,anyway.

It absolutely amazes me that people like Rod Stewart, Bob Dylan, Leonard Cohen, Tiny Tim and Bryan Adams are considered singers. I sound like sh-- in the shower myself though I'm told.

I'm also amazed at people with speech impediments who are broadcasters.

I'm wrong about your racism, and yet in the very sentence that you make that claim, you prove me correct. You're literally too much, cuhulin. Time to quit...as I told you before, you've overplayed your hand.

> not really have slanted eyes,it's the way the tops of their eyes

Don't try to teach me anything. The only thing that I could learn from you, I don't want to know. Dogballer.

> look.Notice,I didn't mention anything about "something else" them slant
> eyed chink slopes wimmins have.

You're probably stupid enough to believe that Asian vaginas run horizontally, which I assume is what you're alluding to. I don't for a minute believe you've actually ever seen one, since I doubt that even the cheapest Saigon whore would have ever let you lay so much as a finger on her. Only guys that never get any and/or don't know what they're talking about talk about it as much as you do. Either that, or you really are gay, and are trying to convince us (or yourself, perhaps?) that you aren't with your incessant talk about "wimmins" and their nether regions. On the other hand, if you want to comment on the genitalia of Australian cattledogs, www.cattledog.com you're the expert and so I'll bow to your superior knowledge. But I'll only make a -short- bow, facing you...you'd try to screw my butt if I bent over any other way.

Oh, and one more thing. Today's phrase is "epicanthic fold". Look it up.

I have done that myself. Sometimes I think of something to add after I
hit the send button. I'll reply to my own post with the additional
information. I don't see anything wrong with it. As a matter of fact you
will find a few threads where I am the only poster and have replied to
myself numerous times. An example is a thread I kept updating with what
I was listening to over a weekends time.

Because Lucky is a persistent foul mouthed moron he is in the kill file.

Problem is, the elites are all the suits at the BBC care about. They've even said that they don't want to be heard by the average person. So they're going to satellite radio and FM relays in cities where the rich and powerful congregate (there's one in San Francisco but not in Sacramento; I doubt very much that Omaha will ever have any BBC programming). Apparently the BBC is just interested in narrowcasting-the selected targeting of the rich and powerful to the exclusion of everybody else. It's a sad end to what was once the great news reporting service in the world, the one that tried to tell the news honestly to as many people as it could reach.

dxAss doesn't give out sensitive information to tards, don't you know.
He's tried this before, posting maddeningly incomplete/vague info on
Sam, and when he was asked for corroboration said that he didn't give
details to tards.

Yeah, he's always replying to himself, and not legit followups, just
more of his "LMAO at the tard" stuff. dxAss can't take the ups and downs
of life, and since he gets mostly downs and no ups, he hates to see
other people get ups. He's a loser who's only link to reality is
listening to Diego Garcia Tower. If that signal ever goes away, he'll
crack like an egg.

3728. BBCWS alternative frequencies

Newsgroup: rec.radio.shortwave
Date: 2005-03-22 05:23:06 UTC
From: running dogg <run@ning.dog>
Message-ID: <423fac71$1_2@127.0.0.1>
Source record: 13265

I've been writing down BBC frequencies from Asia with an eye towards still being able to receive The World Today, which is on at 2200 and 0200 for A05.

The main frequencies for Asia after 0000 are 15360, which switches between Singapore and Thailand transmitters and is on until 0900, and 15280 which is solely from Thailand and is on until 0530. Unfortunately I couldn't receive either of these at 0500 March 22. 15280 had no hint of any signal, while 15360 had an audible carrier but no voice, and my attempts to get voice were fruitless. I'll have to try again tomorrow at 0200 to see if reception is still as bad.

The BBC is also on 7105 from 2100-0000 and on 9740 from 2200-0000. I haven't tried these yet.

I -had- noticed that, and it's the main thing that irritates me about him. Nothing's worse than someone who keeps changing their name (or what-have-you) to get around kill filters, etc. It appears that quite a few people on Usenet have complained about him. Great minds thinking alike, and all that. <g> But it doesn't appear to have done any good...indeed, in the long run, how could it? These people just come back with a new name, under a new account. Remember, they're on a mission from God; common courtesy has no place here.

Source record: 13487

US lack of SW receivers in cars: potentially a 1930s-1940s decision to stop 'creeping socialism'...

I believe the decision on SW dates back that far, and there were certainly adequate arguments for this based on the economies of scale at the time and the overall quality of SW receivers.

The USSR broadcasting directly to the US in the early 1950s killed the possibility of such a technical development.
(Vladivostok & Magadan Relay Stations ~ 1956, the Moscow region had 20 SW relay stations by 1950 that could reach North America easily.)

Australia and NZ did not get SW in cars, not even tropical bands -- for similar reasons.
The ABC (abc.net.au) did not have that much power over automakers in post WWII Australia -- that is power to include tropical band reception for cars sold in NT & Northern WA+QLD.

SC,
.
In the USA the Car Radio is a piece of Audio Equipment.
This is why Tapes, CDs and Mega-Watt Sound Systems
are so big. International Shortwave Broadcast coming
across the Ocean, vice from the next-state in a Mobile
Environment make Shortwave less than the best sounding
Radio Audio Wise. Shortwave is simply not a "Hot Button"
Consumer Accessory for 99.73% of New Car Buyers. Now
the Auto Makers are pushing XM and Sirius Satellite Radio
as a High Quality Audio and Content Systems; plus they
are an additional revenue stream post-sale of new cars.
.

My mistake... could have sworn the freq. was in there. It was 3890.

Apparently at times according to reports there is a voice with the data burst,
but it is a voice different than that of Yosemite Sam.

'Cut numbers' substitute alpha characters for numbers. It's an easier quicker
way to send number traffic.

Here is what M8 uses:

0 T
1 A
2 N
3 D
4 U
5 W
6 R
7 I
8 G
9 M

Still costs too much, because the "as little as $150"
is not what they will pay; in the third world, it
tends to cost higher. Many people there already
own shortwaves and they don't have our need to
have the latest gadget.

If it's the 21st Century, how come we're still listening
to AM radio and watching analog televisions??

GA,

Yes - Relative Low Cost and Availability can make RG-6
Quad Shield it a good buy for most Shortwave Listener's.
.
I like the single R6 Quad Shield Coax Cable with the
attached Ground Wire.
http://www.sadoun.com/Sat/Order/Cables.htm
http://www.impactacoustics.com/product.asp?cat_id=206&sku=43069
RadioShack => http://tinyurl.com/4f3hw
.
TIP - If your doing any In-the-Attic Shortwave Listener
(SWL) Antennas the Attached Ground Wire (Messager)
can simplify the Planning and Installation.
.
IIRC - The "RG" that is used in the designation of most
Coax Cable stands for 'Radio Guide'.
.

Three facts that Hillary Clinton doesn't want known
about herself:

1. She was the president of the Young Republicans
when she was a student at Wellesley college.

2. She was once the lobbyist for Walmart.

3. She has recently visited India to promise capitalists
there she will do everything she can to send US jobs to India.

Don't believe her hype. She isn't a liberal. She's
isn't even really a Democrat in spirit. But she
certainly is anti-American. Just another whore
for the corporations here and abroad.

That's a messenger cable for mechanical strength, not a ground. If
you use 2 grounds (messenger + coax shield) you get a ground loop.

Who says they're all hobbyists? Just because one owns a shortwave receiver does not automatically make them a hobbyist.

Yes, they have. Don't have a link at hand, but they have indeed indicated in the past that they are more interested perhaps in reaching the elites who have a hand in shaping policy, etc.

You'd have to go back and research the shortwave literature.

Nah, I don't think you're a fool for buying them. Sometimes just the fact that you have an unusual item that's hard to find and shows us a bit of technical history is enough to make it yours.

Like an very old coin. Hold it in your hands, and you can try to imagine all the places the coin has been and all the people who owned it.

Not to mention she's a closet lesbian and has slept with more women then
Bill. I know this will come out by election time.
She will never get elected. I think most men won't vote for her. I believe
terrorists won't repect her and will launch more attacks just to show their
attitude towards her and women.

There's a reference in the 2003 Passport, page 81. The
current head of the BBC sniffs at the idea of wanting
to be heard by Detroit automobile workers.

Tell that one to the people who own the stations. Locally,
the AM stations do quite well against the FM stations,
and there's a big reason why some industry types
are getting worried about the cutover to digital
television; not enough people are buying digital
tv's.

And ya ain't gonna like price fixing should it ever come to that. (again)
It did during WWII and man the black market flourished and BL prices were
outta sight.

I'm just shocked how this radio has shot in price over the last 3 weeks. I
don't care how they spend their money, but I can't understand why all of a
sudden they are so hot???

Yeah, in that case they probably are being relayed by the same transmitter.

That is a Cuban cut number station. They use the following format:

A=1
N=2
D=3
U=4
W=5
R=6
G=7
M=8
N=9
T=0

I had the YS buzz on 3891 DSB last night at 0141. It transmitted about every 1:20, though it didn't seem to be precise and ranged anywhere from 1:17 to 1:22. It was the standard buzz that used to precede "varmint," but was followed by a different buzz.

Boy, it breaks my heart that a few of the folks in this group called
you lazy. You were essentially using the people in this group as guinea
pigs while conveniently failing to inform them of this fact--until of
course your rinky-dink "experiment" was over.

This kind of deceptive behavior really stinks, and it doesn't stink
less if you say "Thanks" or "I'm sorry" after the fact.

Yeah, that's what I heard here this morning also. Didn't hear the voice that the individual in Arizona had apparently heard yesterday or the day before.

Yes, that's the way I generally look at it. It's not as though I'm just talking to myself; rather, I am posting an addendum to what I had already posted.

However, for the clueless. that is apparently a problem. I do wish them well however, but for the moment they apparently wish to remain clueless.

SOF,
.
The original post was titled "Voyager probes in funding crisis"
.
It then morphied into something different and had become 'Off-Topic'.
.
I then continued the thread by simply Changing the title to something
that reflected the topic and tone of the evolved theme and place an
(OT) in front of the continued thread - aka : Truth-in-Posting [.]
.
At least at with a "Factual Title" and an "(OT)"
at the Start of the Subject Line :
YOU - Have a Choice 'To-Read' the (OT) Thread
-or-
YOU - Have a Choice 'Not-To-Read' the (OT) Thread [.]
.
"Some OleFart" - now there is the truth ~ RHF

They did, they did. I think it was for some Dylan song's anniversary
(or perhaps just the PR bumph for his book), they had some Dylan specials
on the Beeb, and one remark was that he was the most covered songwriter
during a good chunk of the Sixties. The Byrds wouldn't have gone anywhere
without him.

They still are, too. On an episode of _Alternative Radio_ I heard
last week (on the bottom of the FM band, KEXP- Seattle), they (David
Barsamyan(sp) and Howard Zinn) discussed how somebody finked to Homeland
Security on a band that was singing Dylan's _Masters of War_. The snitch
was claiming that the band was threatening the life of the President, so
everybody got interviewed by the Secret Service.

3814. Eton E-One-X-M (USA)

Newsgroup: rec.radio.shortwave
Date: 2005-03-22 19:31:30 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <d1prqi$152$1@titan.btinternet.com>
Source record: 13458

The first-ever radio to combine A-M, F-M, shortwave, longwave and X-M Satellite Radio.

The Eton E-One-X-M sells for 500 dollars. But enthusiasts who want to listen in on news of the world and enjoy high-quality F-M and satellite music indicate it's worth it.

Measuring 12-by-seven inches and weighing about four pounds, this radio is not exactly a Walkman, but it can be moved around the house, as long as the satellite antenna can see the sky.

Its biggest shortcoming is that the E-One-X-M needs headphones or a second external speaker to play F-M and X-M in stereo.

The radio will be in stores in May.

Hope you enjoy toting it.

And at the same time perhaps it will stop you from posting nonsense to various shortwave groups, and preclude you from lifting others material and posting it to said groups without attribution.

Source record: 13486

awww heck,look around on ebay and buy a webtv box and hook it up to your tv set and give it a try for a month or so.Some Best Buy and Circuit City stores might still have some RCA webtv boxes for sale.What have y'all got to lose? I like webtv tv so much that I have half a dozen spare webtv boxes here in case the one I am useing now bites the dust.I reccomend the Philips brand name webtv boxes because Philips company is still doing repair service on them and carrys a warranty.Philips,RCA,Sony and Samsung made webtv boxes and there are still a lot of webtv boxes of whichever brand name that are still being used everyday ever since webtv came into existance in 1996 or 1997.Not too bad at all,in my opinion.There is a new msntv2 box on the market since October 2004 but they (msntv) are still doing upgrades on those msntv2 boxes so they are still sort of buggy now untill they get those msntv2 boxes ironed out properly.The webtv boxes were like that too for a while.

Thank you everybody for all tips. I think its ok now.I found a screw behind
the tuning knob on the front. When I removed the screw, there was no noise
anymore.
Another question, how can I get loose the potentiometer knob? I think it is
glued.

3826. FS new wellbrook ALA330S new never installed

Newsgroup: rec.radio.shortwave
Date: 2005-03-22 21:18:44 UTC
From: big boy now <shogun1965@lycos.co.uk>
Message-ID: <UY%%d.112241$Bk7.352@fe1.news.blueyonder.co.uk>
Source record: 13456

this offer is for un buyers only
a few weeks ago i brought a new Wellbrook ALA330S active loop antenna. i paid £169.99 + £10 P+P i have also purchased 50+ feet of low loss mini red coax as recommended for this loop antenna. this is also unused there is also two BNC plugs with gold plated centre pins in total this lot cost me £200.
at the time i brought this lot my farther in-law was being treated for cancer he had a 14 hour operation and sadly he died six days after his operation.
the reason i am selling this new Wellbrook is i have just been given the chance to buy a two week old DX-1 Pro....
i would prefer the buyer to collect this as i don't have time to send it.
this is how it arrived and i have only tested it and it has been wrapped in the original packaging since.....i am looking for serious offers around £150.00 as this is all new and never been installed out doors i still have all paper work and original bill of sale....
email me your offers.....

Thanks: john.

An un buyer is not a buyer. They may be just browsing, or perhaps are just a shoplifting Ace.

Perhaps you meant 'us buyers', but that doen't work either, as you are the SELLER in this case and can't properly include yourself in the collective pronoun.

3845. Cell Phone Jammer for sale - MONIX MGB-1S

Newsgroup: rec.radio.shortwave
Date: 2005-03-23 01:10:52 UTC
From: donestuardo@yahoo.com
Message-ID: <1111540252.643372.135870@o13g2000cwo.googlegroups.com>
Source record: 13461

I have a nearly new cell phone jammer for sale - range is
approximately 30 metres in radius. Model MONIX MGB-1S cellular Jammer.

Used only one week (and then the tenant was gone! - hint great for
getting rid of loser tenants who depend on their cell phones for
calls).

Includes unit, plus 2 attennas, and a power cable and transformer for
North American Standard power.

Asking price $395 plus shipping.

Please email me at donestuardo (AT Sign) yahoo.com or call me on my
cell at (416) 458-0012 and I will be happy to go over details with you.

Thanks,

Stew

This would be why 6 of the top 10 billing stations in the USA are AM? 17 of
the top 40 stations? Including the second and 4th highest billers in the US?

Just an aside: Which are the six top-billing AM stations in the U.S. and
how are they spread throughout the top 10? I'd guess that WGN is one of the
six, but not having any data at hand, I can't make a really good guess on
the other five.

3851. Why is the Kenwood R-2000 selling for so much

Newsgroup: rec.radio.shortwave
Date: 2005-03-23 02:26:32 UTC
From: Nathan <yzerman47@yahoo.com>

Why is the Kenwood R-2000 receiver selling for the same amount as a Kenwood R-5000. Ok, it is eBay and people misplace their brains once in a while but this seems to be the case almost all the time. What am I missing about this radio?

3852. HAM Radio Deluxe, the solution.

Newsgroup: rec.radio.shortwave
Date: 2005-03-23 02:31:05 UTC

"&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com> wrote in
news:Xns961F68025FE9TheDoctorisin@216.168.3.44:

Having forestalled my purchase of RX Plus (I used the Demo period, very nice program), due to my concerns about not being able to use the program on a future computer, I happened to download HAM Radio Deluxe.

Superb. Has anyone here tried it? I use the Icom R-75, (among others, but for the sake of discussion), with the serial port connection to my laptop. Well, to be more specific, the R-75 Serial connection to the USB on my laptop.

Anyway, it was my understanding that I needed a CAT connection to use HAM Radio Deluxe, but apparently not. I had a friend (his DSL vs. my Dial UP) download the CD Image (image being a compilation of files, not a picture), initially a zip file 69 MB in size, that is unzipped onto the CD, producing a CD suitable for distribution (at HAM clubs, to friends, etc, but it must be distributed free). Loaded it onto my computer, and ran the program, figuring that I could learn something about it before purchasing the CAT adapter. I was astonished to see that the display in HAM Radio Deluxe had the same frequency as my radio, which was on at the time. Moved the volume control in the program, and the radio grew silent. Moved it the other way, louder. It was actually working.

http://hrd.ham-radio.ch/index.html

This program is great. I downloaded the version 3.0, but I think that in order to have the bandscope, the Beta version 3.1 Build 579 or later is needed.
http://www.ham-radio.ch/kits/CD%20Images/Betas/3.1/HRDCDv031b579.zip

The official released version, 3.0 Build 531
http://www.ham-radio.ch/kits/CD%20Images/Release/3.0/HRDCDv030b531.zip

Though I had a CD made of the Official Release version, downloading and installing the Beta Kits, available here, brought the software up to the level I needed for the bandscope.
http://hrd.ham-radio.ch/downloads.html#Beta_Kits
They are 7 MB in size, and simply install over the existing software.

Anyway, all the controls seem to be available and functioning. This through the USB port, to a USB to Serial converter that I bought through RT systems (they sell Amateur Radio Software).

It has to be seen to be believed. There is literally too much to write about. Bandscope (in versions 3.1 Build 579 and up) volume, squelch, Dual Passband Tuning Controls, RF Gain, NR Level, and much more. And it's

free. Kudos to the writers of this great program.

Dr. Artaud

It's not on the map in any Canadian media. At all. Won't be. And it shouldn't be. Any bleeding heart who wants to pursue this issue should first travel to Labrador and visit a few Innu communities which were devastated by the 1970's boycott, and a few outports on the island of Nfld. It'd be just a sensible to boycott products of countries which produce veal and use horses to make premarin.

I think it's got something to do with newsreader incompatibility. My newsreader doesn't have a font setting that I can see (but I'll look) so what looks normal to me may look bad to you. The type looks fine on this end. I will admit that when I try to print an article the font is very small but I thought that was just an issue with my printer. What newsreader are you using? I'm using some obscure reader that was the only one on Tucows that had online reading at the time I got this computer (2002).

From what I've heard, KALW, the SF school district station, broadcasts
Newshour at 2pm. I've never actually heard it here, but I read that in
the Chronicle in an article making fun of the BBC's style.

Responding to yourself again? Talk about ego.

And to answer your question...I've done plenty of DXing, but I never
bothered to send for QSLs. I was pretty poor as a kid and my parents
balked at paying postage to Moscow. So I just wrote down what I heard. I
don't know how many countries I've actually heard, since many of my logs
are long gone.

CB is up around 26 Mhz, which is in the upper end of the HF spectrum.
Usually the propagation isn't that great up there, but I'd imagine that
every so often it can really get out.

I found the "Font" drop down menu and changed the font to 15. That
should be better on your eyes, although it makes the spacing of my
replies look funny.

That reminds me of an old radio station promo where these two guys are
out in the middle of nowhere and they're tuning around on the radio in
their car and they hear the promo for this particular radio station, and
one of the guys says "But there's not a radio station for miles" and the
other guy says "They must be broadcasting from beyond the grave" and
then the radio station announces a new single by Jimi Hendrix and Elvis
Presley, and the guys go "Whoa...".

That's it, dead hams broadcasting from beyond the grave, or
retransmissions of old signals by aliens on Alpha Centauri.

LUCKY,
.
I have bought Radios on eBay from this Buyer "remdjem"
Panasonic RF-2200, RF-2900 and RF-2600.
.
He likes to listen to Classical Music FM Stations both
in the SF Bay Area and around Northern California.
.
He evidently thinks (knows) the RadioShack Realistic
DX-400 will give him the Tunes and Sound that He Enjoys.

3869. Re: Problem with tuning knob on Lowe HF 150.

Newsgroup: rec.radio.shortwave
Date: 2005-03-23 03:56:19 UTC
From: Dave Holford <holford@sympatico.ca>
Message-ID: <4240E8E3.DBE88630@sympatico.ca>
Source record: 13509

This was discussed a few months back and I seem to recall that the cap of the knob was removable; which allowed access to a screw which would loosen the knob. I have encountered other knobs that work this way so that might be the answer.

Although I can get a knife edge under the end cap of mine, it does not seem to want to pop off, and I am not inclined to experiment with much force.

A search of the archives might confirm the answer.

Dave

Assassinating a presidential candidate (and a serving US Senator) is a
federal crime. You will be tried at a federal courthouse in Washington
DC and of course be found Guilty (nobody is ever found not guilty in a
federal court) and then you will be executed. OTOH, you will be famous,
a part of American history. Oswald proved that all that a loser with a
gun has to do is kill the president and he will get fame far beyond what
he deserves. Go ahead, collect your ammo, test it out, because you only
get one shot.

Can this sort of thing be predicted, so that I'm not in LA when it
happens? I mean, the implosion of an ego that size could wipe out dozens
of square miles. It could create a massive tsunami, create new earth
formations. Now imagine what would happen if EVERY inflated ego in LA

imploded. Not a pretty picture.

I'll second that :) I use it on a PCR-1000 here. Since the demise of TalkPCR, at least for further development, I had been looking for something beyond the Bonito crap and the Icom software that came with it. For aprogram that is free it sure is a winner. Hams with just about any of the modern transceivers that include a computer control port, will probably find it listed in the supported devices. Along with its integration on PSK31, it makes a very neat package for someone wanting to try PSK and computer control.

Well thought out and implemented and you certainly cannot beat the price :)

This is correct.....this is a collet type of knob. If you have very sharp fingernails or use an X-Acto knife, you can remove the cap. There is a Phillips head screw underneath the cap. If you try to pull the knob off without loosening the screw, you will end up pulling the shaft out of the pot.

Pete

If you are talking about that flat head Phillips head screw, that is what affixes the display board to the front panel. You need that screw in order to eliminate mechanical stresses which could damage the board.

Yeah I guess so. I never heard one so I can't say myself. FM listeners don't really care about SW and SSB. Actually, I was looking to buy one of these radios myself if I saw one in very good condition.

I wanted one in my collection since it was supposedly the only triple conversion port out there. They were going for $40-$60 but many didn't look to good. I didn't want to pay more then say $50 for one. I did some research on the radio and the keyboard entry goes bad after a while. There is no manual knob for tuning so you're stuck with the keyboard.

Even if you know how to fix radios, the keyboard is "welded" down with plastic tabs to the radio's body. So, it can only be removed and installed a few times.
The closer you live to the ocean, the faster the keyboard goes bad over time.
The radio is pretty old so you want one in well kept in good condition.

I think the triple conversion factor is the reason it's sought after so much. Wonder how much difference it really makes and can you hear it with a portable???

But for $162, and if he likes FM, I think he could have done better but to each his own I say!

Lucky

Here is the telling line that describes why you chose to rant about this to begin with: "I wanted one in my collection...".

So essentially you were just pissed because the price went high?

If you are indeed so well off, as you alluded to in an earlier post, then money should be no object to you... correct?

Why is that any different than someone paying $500.00 for an Icom R71a, $900.00 for a Sony 6800W Orange dial, or $3,000 and a Panasonic RF9000. Ebay is about as close as we will come to a perfect market, or one that reflects the true market value for an item. Someone wanted the radio more than you did and was willing to use his wallet rather than his mouth.

The price of a radio is directly to how many people are interested in it. Apparently there are more potential buyers for the R2000 than the R5000, and the price gets bid up. I would also guess that the R2000 buyers are not using the number of features and knobs as indicators of value. Simplicity of use and a front firing speaker might be the attraction.

I do own a Panasonic Model No.RF-2600 radio which I bought brand new at a Service Merchandise store that used to be on I-55 Frontage Road about twenty something years ago.I am not saying it is a great radio but it still works ok.I am not too sure if I want to sell it,but I might,it all depends on how much money someone makes an off to me for the radio.I don't remember exactly how much money I paid for the radio,I think it was somewhere between $160.00 to $180.00.

If you're selling off the Wellbrook, I hope you at least had a chance
to test the DX-1 Pro. I have no doubt that it's a fine antenna, but I
seem to recall your being concerned about noise at your location. I
wonder if the DX-1 Pro will cope with noise as well as the Wellbrook.

We should emend this slightly:

The Eton E-One-X-M sells for 500 dollars, promises to yield portable performance at a tabletop price, and will probably suffer from a wide variety of technical failures. But enthusiasts who want to listen in on news of the world and enjoy high-quality F-M and satellite music indicate it's worth it.

From the BBC web site:

"Short Wave Radio Frequencies

From March 27 2005 there will be adjustments to the BBC World Service shortwave provisions to reflect global changes in audiencesï¿½ use of short wave.

The number of hours broadcast on short wave in English, Arabic, Spanish and Portuguese will be reduced.

For any changes to short wave listening where you live, as well as detailed schedule and programme information, please select your region from the links below:"

At 1458 utc tuned in WLO (Mobile Alabama?)
un 12581.5 USB broadcasting CW callsing repeated
until 1500 when signal changed to sitor A.

Weather from 1500-1510 in the same
format as USCG but
at end of message it
was identified as being made
by Wilkens Weather Technologies
in Houston, Texas.
Signal was S9+20 here in Maryland.

Any idea if xmitter was anywhere else but
in Mobile or Houston. as signal sounded like
a local?

The difference is that Dylan can craft good songs. Ability to sing is over-rated, anyway. Pro Tools can make any shower-warbler sound good these days. It took guts and skill and practise to develop a voice with lesser abilities in the old days.

Many famous vocalists learned to sing within their abilities to come up with a personal sound they later became famous and appreciated for. Remember that early arm-chair critics *hated* Lena Horne and Billie Holiday. Holiday is famous for being constantly behind the beat and slightly flat, with an uncontrolled quaver. This is now her signature sound that other vocalists attempt to copy. I suppose the same can be said for many other early blues, R&B and country swing musicians, as well.

Even old crooners like Frank Sinatra were belittled throughout their career for being too weak, or having too short a range. There is a recording of Bing Crosby chiding Frank for not being able to reach a note during a duet, "is this what you were looking for, son?"

3934. Rush sounds defensive

Newsgroup: rec.radio.shortwave
Date: 2005-03-23 17:20:53 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <4241A574.F9C@mindspring.com>
Source record: 13316

His listeners don't agree with him, so he told them to listen to
somebody else.

But he's never been any good on moralizing, as to theory or as to
entertainment value.

Either he gets over it or his show ends.

It's about marriage, not about killing, Rush.

A spouse is better than a living will because the spouse can
take into account the circumstances. You don't have to write
in advance something that takes everything possible into account
because the spouse uses their judgment from your indications.

Unless courts don't listen to spouses but rather to anybody
who claims they know better, which is what did not happen here, yet.

It's a possibility that your spouse is a rotten cad and won't
take your wishes into account right, but the commitment is made
precisely in spite of that possibility, and that is its value.

Which is affirmed, as things stand, and as Rush, twice divorced,
deplores.

So he'll have an unlistenable show for a while.

3937. An ode to the late Dr. euGene Scott

Newsgroup: rec.radio.shortwave
Date: 2005-03-23 17:34:37 UTC
From: dogpile III <doggiesg@amishonline.com>
Message-ID: <26668$4241a8a9$d1cc50f8$9976@snip.allthenewsgroups.com>
Source record: 13320

(actually someone else's ode I found someplace else and
thought worthy of posting here as this, now thankfully dead,
pilferer of money via religion is now taking a dirt nap - enjoy!)

---

from: http://www.amiright.com/parody/70s/theclash8.shtml

"I Fought The Law" Based on the performance by The Clash
"I Mocked The Lord" Parody by mAximo

Dr Gene Scott was a radio & TV "teacher" and as stated
during station IDs:"Dr Scott teaches every Sunday in the
Los Angeles University Cathedral." Officially the bishop
of the church that he had formed in his own image, Dr euGene
Scott had "taught" to his L.A. "audience" for almost 30
years, which towards the end of his life numbered circa 15,000.
He later transformed his ministry into a faith-healing cult, after he
was confronted with prostate cancer in 2000, stating that
God was to heal him due to his faith. Further unusual practices
toward the end of his career included: 1. weekly "Festivals" which
were conducted like mini-Nuremberg rallies, whereby "elite members"
of the "church" would leap to their feet on cue & shout "Yes, Sir!"
or lead the audience to give standing ovations; Those elite members
were expected to "perform" without pay & without question for
such an honor; 2. telling his audience that they are to pay him
"worth-ship" to show how much they felt his teaching was
"worth" to them, or they'd be stealing from God, if they felt
that he had taught them anything; Formerly he had revived
now-obsolete Old Testament tithing, such tha the all but told
his congregation that if they did not pay such tithes, then they
would go to hell..Although he claimed a salary as pastor of
only $1 a year, he enjoyed the exclusive use of a multimillion-dollar
horse ranch, a 11,488 sq.ft residence, and a 20,089 sq.ft museum/gallery
next door, all paid for out of church funds, and to the exclusion
of church members. He later married one of his "Pony Girls" as
his 3rd wife, who had worked in the porn industry, and is now his
successor as pastor. .After years of allowing his cancer to reach
an advanced stage unchecked, Dr Scott "went home" a month
ago on 21 February 2005. His "homecoming song" as sung by
himself (in parody) appears below.....

Wakin' up hot and well-done:
I mocked the Lord, and the Lord won;
I mocked the Lord, and the Lord won.
.

Stole God's dollars--don't want just one:
I mocked the Lord, and the Lord won;
I mocked the Lord, and the Lord won.
.
I left my Baby there to carry on, as now my life is done;
She's a bad-ass and you'll all be had:
I mocked the Lord, and the Lord won;
I mocked the Lord, and the Lord won.
.
(Instrumental break: Git-onna phones!)
.
Robbin' people with a guilt-trip:
I mocked the Lord, and the Lord won;
I mocked the Lord, and the Lord won.
.
Made them suckers pay me worth-ship:
I mocked the Lord, and the Lord won;
I mocked the Lord, and the Lord won.
.
I left my Baby there to carry on, as now my life is done;
She's a bad-ass, and you'll all be had:
I mocked the Lord, and the Lord won;
I mocked the Lord, and the Lord won.
(Instrumental break: Git-onna phones!)
I mocked the Lord, and the Lord won;
I mocked the Lord, and the Lord won.
(Repeat to Endtime)

I finished writing the lyrics to 'Doc's Homecoming Song' on Monday morning, & submitted it before the posting deadline for that day, 1 month after his going home. It was finished in record time for me: thanks to everyone who posted in this newsgroup to make it a veritable mine(field) of information. Special mention goes to Timmah for stating in the thread PMS SHOULD WIN AN ACADEMY AWARD last week Tuesday, a thematic idea that leapt off the page. From then on it was smooth sailing to simply compile material. By said morning there was only 1 problem: which verses to leave out from the ones I had compiled. The link to the lyrics should appear above. Honorary mention goes to Jocko for corrections to its accompanying introduction. I'd also like to thank my parents, their ancestors, & God for allowing me to partake in this wonderful experience.

You think Ebay is the perfect market? HA
You must be kidding? These knuckle heads have more money then brains.
People have been flocking to sell on Ebay since dummies overpay for used
items that could be bought new cheaper.

I see it all the time.

The perfect market...that's a laugh.

Lucky

A perfect or close to perfect market is one where all sellers can offer their item(s) and bidders can offer to purchase while having access to information about prior and current sales activity. On ebay there is a wealth of information about what is being offered, what prices items are selling at and what prices do not attract buyers. Are there scams - sure, but they are a small small part of the action.

A perfect or close to perfect market is not one where you get your idea of the lowest price. The only guaranty for the buyer is that if you want a certain item you have to be willing to top the last bidders price. The only guaranty for the seller is that your good will sell if it is priced to attract buyers and buyers are looking. A perfect market doesn't guarantee that some participants will make dumb decisions. Think of the market as an opportunity that can be taken or forgone - it's your choice.

I don't care about the XM feature, but I am curious to see how the thing actually performs on shortwave. I think at this point the radio can't possibly live up to all the hype and anticipation, but I'm looking forward to seeing what kind of reviews it gets.

> designed for small signal RF amplification.
>
Huh?

Dynamic range has little to do with the actual device used, but
has everything to do with overall design of the receiver.

Of course you can get cheap transistors that will be able to
handle large signals. But you've got to run them at high current,
so they can handle those large signals.

And once you get out of that RF stage, it won't mean a thing if the
mixer that follows it overloads easily. Indeed, many a tube radio
overloaded because there was too much amplification ahead of the mixer.
The gain was needed there because front end filtering was needed there,
or else there'd be too much image response.

What really happened is that along with solid state devices, or maybe
it happened in parallel, receiver design took big steps forward.

Almost parallel with the introduction of solid state receivers, IF
filters in the HF range came along. This meant that good image rejection
could be had without lots of front end filtering, or without double
conversion. This allowed for what William Sabin talked about in his
1970 QST article about receivers, ie there should be as little gain
as possible ahead of the main selectivity of the receiver. You'd
start to see designs where the antenna fed the mixer through some
filtering, and that mixer may not have even been a gain stage. Right
out of the mixer, is the filter that provided absolute selectivity,
instead of spreading it through an IF strip, or after a conversion or
two more.

I'd say a lot more work was done on strong signal handling as
transistors were introduced than before that. Partly this is due
to the new devices not being very good signal-handling wise when
they were first introduced, because they weren't properly understood.
Partly this was because the radio spectrum got increasingly more

crowded, providing a lot more strong signals nearby.

But it was also just a desire to look to better things. You'd see people pick apart the designs of old receivers, and they often were not well designed, placing to much gain too early, allowing for that overload.

A lot of tube receivers were less prone to overload because of all the front end filtering, or at least that explains the good ones. Most tube mixers were really no different from an expensive receiver to a cheap receiver, just an unbalanced mixer that worked fine because of the filtering ahead of it. It was only in the early sixties that we started seeing much work on better mixers, with things like the 7360. And it was only 1972 that I saw the suggestion of using a transmitting tube as the RF stage in a tube receiver (ahead of a 7360 mixer which could better handle strong signals), but transistor designs were already heading that way, with talk of using transistors designed for CATV use as first stages, with that all necessary higher current through them in order to handle strong signals. Those CATV transistors were as new tubes at the time, as I recall.

Bad design is bad design, it has nothing to do with tubes or transistors. Cost will have a more significant effect on the final outcome. Talk of the R390 is pretty unfair here, since it was top of the line when it came out, and virtually no individual could afford to buy one for their own hobby use. Few today would be buying top of the line (ie intended for professional use, not the hobbyist) solid state receivers, either.

Of course you can get junk receivers today. But you could get junk receivers in the days of tubes. And one of the intriguing things is that there may be a bigger spread of shortwave receivers nowadays, made possible because of solid state and advances in design.

Maybe, but you will notice when people bid on radios like the R-75, Drake R8 a and b, Harris rigs, you find they go for close to real market prices. That's because those buyers are smarter and more informed customers. That's a real market demonstration.

But you'll notice the "less serious" or more frivolous the item is, the dumber and less informed the buyers are. These are the idiots that make Ebay a great place to unload.

So, just because some bumpkin is willing to pay 4 times what it's really worth, that does not make it worth that much. I bet ya after he uses the radio for 2 weeks, he'll wonder why the hell he paid $162 for it.

Back in 1930, formal broadcasting was only a decade old. I'm not sure
when car radios started appearing (as opposed to someone putting their
own radio in a car), but it was either a recent thing at that point, or
not yet happening. In 1921, shortwave wasn't even seen as a viable thing.
Hams had been relegated to 200 meters and down, ie above the current
AM broadcast band. IN December of 1921, they proved that the shortwave
frequencies that had been dismissed as useless could be useful, spanning
the Atlantic in tests, twenty years after Marconi had shown radio]
waves could span the Atlantic.

Given the times, I suspect one really good reason for no shortwave,
beyond the lack of shortwave stations, was that cars were way too noisy.
A lot of work has been done on reducing the noise generated by cars in
more recent decades. Back then, it would have been up to the installer,
and that would be costly.

Shortwave has always been a relatively small thing in North America.
IN the early days of radio, there was no such thing as broadcasting,
but then it was all in the lower frequencies. By the time radio had
grown up, separated into specific services, the average radio listener
was only interested in local broadcasts. Those with shortwave receivers
were either licensed radio amateurs, or hobbyists. SUre, shortwave
bands appeared from time to time on home radios, but they were in a minority
compared to those that were AM broadcast band only.

Add all this up, and there was little reason to have shortwave in
car radios. If people weren't listening at home, there's even less
reason to have it in the car.

Shortwave in car radios exists because in some areas of the world,
shortwave is a more significant factor. IN Europe, at the very least
they have countries close together so there may be more interest
in hearing their neighbors, and of course those signals will be
stronger. I gather in Africa, shortwave has traditionally taken
the place of medium wave broadcasting. For that matter, given
the colonization of Africa, there may have been many who wanted to

have "news from home", ie a higher level of interest in shortwave
in the first place, so there was demand for shortwave car radios.

But in North AMerica, the interest is relatively small.

No, there's no reason to believe censorship was an issue.

It is an interesting chart, but not exactly perfect in it's approach.
It makes the blanket statement that single conversion radios will be
excluded because "Double Conversion is necessary to reduce images."
The mere presence of double conversion circuitry does not guaranty a
reduction in images in my experience. This can be seen in the DE1103
which has serious problems with images from strong signals at twice the
IF (900 khz) down. And the DE1103 was included as one of the final
five at least in part because of it's purported resistance to images.
I assume the DE1102 has similar image problems, but don't know for sure.

And of course, single conversion doesn't mean much in itself, since
it doesn't describe the design of a receiver. A single conversion
to 455KHz likely means bad image rejection at the higher frequencies,
but such a general statement overlooks receivers with good front
end selectivity that compensates for the low IF. And of course,
one can do a single conversion to a frequency in the HF range, and
image rejection will be pretty good.

3965. Re: Question about AM radio reception, equipment, and expectations

Newsgroup: rec.radio.shortwave
Date: 2005-03-23 19:49:44 UTC
From: Kim_Jong_Il@volcanomail.com
Message-ID: <1111607384.869523.23460@f14g2000cwb.googlegroups.com>
Source record: 13348

"... Car radios can often be quite good as far as reception...."

This again. I'm not disputing you. In fact, I have yet to encounter the home hi-fi stereo receiver that approaches a car radio in terms of AM-MW performance. I can attest to the remarkable ability of a run of the mill Delco car radio to haul in AM stations from miles away.

There was a page at the C. Crane site commenting on this.
<brief delay while I search my files. SFX: the song played near the end of Jeopardy while the contestants think of the answer to the final question.>

Ah, here we go:

>>
Subject: Re: AM Car Radios For DX?
Newsgroups: rec.radio.shortwave
Date: 2003-02-03 14:46:59 PST

Here's that website at C. Crane:
http://www.ccrane.com/news/archives/whatsinthenews10.28.02.htm
<<

Never throw anything away. Yeah, but, attempting to open that site, I find that the URL no longer works. One is referred to

http://www.ccrane.com/news/news-archives.aspx
and from there to

http://www.ccrane.com/news/car-radio-reception.10.28.02.aspx
and
http://www.ccrane.com/news/car-radio-reception.11.11.02.aspx

These pages deal largely with poor reception and noise suppression.

Yup. That's why I'm not in favor of reviews that base their evaluation
on feature counts. A written review describing how the competing
receivers perform is far more useful when making a decision to purchase.

Cell phone jamming is illegal in the US. I think you may be in violation of some law connected to the Patriot Act, as well, by interfering with potential emergency communications.

That being aside, if I ever caught anyone jamming my phone, the law would be the least of their problems.

Yes, there are rude people who talk on their cell phones in movie theaters, but those are the same people that sit and jabber with their friends while the movie's rolling anyway. As for restaurants, people talk in restaurants.. I see no difference whether they're talking on their cell phones or talking to the person at the table with them.

I do thing that people should use the 'manner mode' (no ring, only a vibration) when they're in a restaurant or whatever, as most people have their rings set far too loud... this is handy if you're in a crowd on the street, but irritating indoors.

And perhaps you can tell me why someone who doesn't want to be tied to a wire for communications is a 'loser'????

Yeah... and green aliens from Waa-Zoot came down and used
their mind-beams to convinced some ham to sneek onto a government
reservation, break into the Q-cleared contractor's facility
and not use it's sophisiticated equipment- oh, no; he brought his own
gear, doubtless told by the aliens just how to jury-rig it
to do all this. *And* he's doing it again, after being
caught red-handed the first time.

You "it's a crazy ham" guys are the ones sounding like the
fruit-loops, now that you have egg all over your faces.
We told you it was an Uncle Sam operation- probably
a test or exercise- and that's exactly what it is.
D.S.

Not if you live where I do in Seattle. 690 has null in their pattern pointing this way, and KIRO-710 is five miles away and 50 kw, and during the day runs IBOC. (If DRM is QRM, what the &*(^% is IBOC). You can get CBC-1 on 6160 kHz, but only until sundown.

Hey, what was it like when KGEI was running? I had a friend up here with an old stereo who's speaker leads formed a half wave dipole for 6 or 9 MHz, and he freaked out when he could hear russian on his speakers. They were 30 or 40 dB over S9 when I tuned them in on my receiver.

I had posted this elsewhere, and it has created some interesting feedback.
Based on Wes W7ZOI's Preogressive RX from the late 1980's. A wonderfully
balanced design to which I added some bells and whistles I like in a
receiver.
These are some shots of my almost finished 1980's theme HF receiver.
All stainless hardware, teflon wiring. Rock stable VFO, homebrew xtal
filters (5/2/5/0.5), selectable and defeatable AGC, notch filter, tone
control, QSK input,built in front end BP filters for each band, preselector,
AM/USB/LSB/CW.
Enjoy:

> Seattle.

I've done a little more monitoring of the 15 Mhz frequencies, and they
do indeed fade out almost completely by 0300. I suspect this is due to
local sunrise in Singapore and Thailand. I believe 12095 is the
frequency that's broadcast from UK transmitters to SAm. I'm in
California, so I'm not sure how well the African freqs would come in
here, but if you can hear them in Seattle I'll give them a shot.

dxAce has posted that 5975 is being moved to Guiana from Antigua (which
is being taken offline as we all know) and will broadcast to SAm, making
it harder to hear up north.

Indeed, they are illegal in the USA. That hasn't stopped people from
using them, though.

Perhaps they know more than you do.

Such as from URL: http://antiqueradio.org/zenithr7000-2.htm

The R-7000 remains a favorite of collectors, however. Produced in small
numbers for only three years, it is one of the scarcest TransOceanics. Only
75,000 in total were produced, as compared to several hundred thousand of
the tube models. Moreover, as the last of its line, the R-7000 has an appeal
similar to the first TransOceanic, the 7G605 Clipper, for anyone wishing to
fill out a TransOceanic collection. Most importantly, it's an excellent
portable multi-band receiver, with features and performance that reflect
Zenith's three decades of TransOceanic development

Original price: $379.95 from 1979-1981

Besides what do you care how folks spend their money ?

The last 2 posts I saw from you referred to "kill" and "hate".
Now you're griping because some guys want to spend their own money
on something *they* want.
I can't help but wonder if you find other things to condemn... not just
items in this group. I bet you complain about nearly everything around you.
Too bad the world isn't like *you* deem it should be. Too bad a couple
of guys are having a blast trying to buy that latest "toy". When was the last
time you told someone you loved them? Smiled just because you felt happy?
Slowed down to let someone merge into traffic?
How come I think you're the guy who speeds up so they *can't* get in.

The highest bid is now well over $800 with a couple of hours to go. While I'd love to have a 7030, I personally wouldn't spend close to a grand on one that's already been in use for several years--and of course, Ebay is a risky forum. I'd rather just take the plunge for a new one.

Still, I hope it's a good unit and that the winning bidder sees many years of good service from it.

>Another question, how can I get loose the potentiometer knob? I think it is
>glued.
>//Lars
>
Not near my hf150 now, but I changed out the pot (noisy) a year ago &
don't seem to remember any screw on the volume knob. I seem to
remember just pulling it off? I may be wrong, but I don't remember
EVER having forgotten anything ;)

I do remember the cursed design virtually requires disassembly &
unsoldering of every part on the board before the volume control could
be removed. Not quite but extremely poor placment of the volume pot.

Amazing reception USB at 01:05. Base station is VERY loud and clear female voice, ID-ing herself as "Chesapeake". Some of the traffic she's talking to is readable here, some is not. I've never heard a stronger signal on this type of communication, though - like AM radio right now. Even Gander is never this strong.

Tony

Has anyone seen a review of the CT800 from sharper image. I bought one off ebay and the dynamic range on SW seems to be quite poor. the SW part of the radio seems to be nothing more more than the Toshiba TA8132AN AM/FM IC. there are some other IC's like for the FM MPX and one other unidentified and two other boards I haven't examined yet.
I wanted to see what the experience of others has been. It looks real cool and isn't too bad at all on MW and FM.

Hi Brian,
I did not keep track- but would guess over 200. Laying out the front panel
and milling it had to be 6 hrs at least. Even cutting the recatngular slot
in the Eddystone backplate for the S meter was hours, as I could not simply
clamp it to my mill table what with the pulleys etc being riveted on.
Layout of the SCAF/ AM demod board would have been a lot easier in surface
mount, but would have deviated from the 1980's theme- that is one packed
board

Not a cost effective way to get a receiver- but then again, I got EXACTLY what I wanted.

Dale W4OP

4027. BBC on science/evolution teaching in the USA

Newsgroup: rec.radio.shortwave
Date: 2005-03-24 02:07:53 UTC
From: uncle arnie <unclearnie@nowhere.at.all>
Message-ID: <114487tcpinvn09@corp.supernews.com>
Source record: 13660

Surprised by this story from 23Mar on BBC ~0400 UTC on 5975. Discussed a school board in Pennsylvania which wanted to teach "creationism" in the guise of "intelligent design", which sounds like spin on creationism. They suggested that fundamentalists are trying to do this all over America. Is this so? Is scientific understanding really this poor? The accepted understanding is: evolution is a "scientific theory", which does not mean 'theory' in the everyday sense. That evolution occurred is a fact, only the details are being worked out, which is the testable scientific theory part. And there is no contradiction between evolution and religious faith.

> portable multi-band receiver, with features and performance that reflect
> Zenith's three decades of TransOceanic development

I believe it was made in Chicago, the last portable radio to be made in
the US. After that, Zenith just made TVs in the American plant, but
those were shut down too (about a decade later, I believe) and
production shifted to Asia. Today, Zenith is just a name to be rented
out, like the rest of them.
>
> Original price: $379.95 from 1979-1981

Ouch! No wonder so few were made. Remember that inflation was 13% at the
time, and unemployment was 10% (high for America). I doubt few people
had the means to purchase one. And if they did, they probably went for a
color TV instead (about the same price).
>
> Besides what do you care how folks spend their money ?

Remember that collectors have very different motives for wanting a
certain item than users. This radio wouldn't be much good to a daily
user, a Degen 1102 would be better than this. But there are people who
collect just TOs, and to them it would be worth a lot. I think that ebay
has really helped the collector markets, but to the detriment of people
looking for a good deal. You can't find a "steal" anymore, anywhere, and
it's because of ebay. Now everybody can see how much a certain item will
bring and price it accordingly.

As I thought - it's not a 24-hour-a-day sort of thing. (KQED simulcasts BBCWS Mon-Fri at 9-10 PM and 1-2 AM (except that Friday night/Saturday morning is only 1:30-2 AM), and weekends 3-4 PM. (The online stream also carries BBCWS when the over-the-air station covers something that they're not allowed to have on the stream for whatever reason. I remember listening to KALW broadcast old "The Goon Show" episodes when I was in college 20 years ago.)

Actually, a number of cable systems in the San Francisco area have BBC World Service 24 hours a day if you hook the cable up to a radio with an external FM antenna connection (the service is provided by C-SPAN). I don't remember any show ever being removed from the broadcast (including the 1990 World Cup Final - I for one listened to it on BBC while watching the SIN/Univision broadcast with the TV sound turned down, rather than the ABC broadcast (which had commercials at the time)). (I have a feeling I wasn't alone; the BBC would not broadcast the 1994 final except on a special frequency to a small part of the world.)

Yep, the fundies have taken control of America, of all three branches of government and many of the school boards and so on, and they're more intent on saving souls than reality, and when reality clashes with the Bible it's reality that gets thrown out the window. Go to Amazon and order the book "With God On Their Side" by Esther Kaplan; it shows how the fundies have gotten government to fund religion in direct contradiction of the First Amendment, how they've warped science to fit predetermined Biblical conclusions, and how they have the support of the majority of Americans to do all this. In this world, Islam is evil, Jews are "uncompleted Christians", and 9-11 was God's punishment for America's wickedness. The solution: convert Muslims and Jews and legislate morality at home to force people to be righteous. If you're not scared yet, you haven't been paying attention.

Try telling that to the rabid, foaming-at-the-mouth fundies... with them, it's gotta be either/or. Either you believe in creationism as set forth in the Bible, or you're a hellbound evolutionist heathen that's in league with the Antichrist. I'm not specifically picking on Christians here, but their fundie subgroups are the ones who seem to be making the most noise about this. Yet I know lots of Christians who believe in evolution. They don't seem to see any real reason why they can't believe in both God and evolution.

This whole "intelligent design" thing is just a ploy by the fundies to make creationism (their version, of course) somehow more palatable to school boards. To which I say, if you don't like the fact that public schools can't espouse any particular religious teaching, then send your kids to a parochial school or home-school them.

I don't profess to know if the universe was 'created' in the Biblical sense. Being an amateur astronomer, I admit that I have looked up on many more than a few occasions at the grandeur of the night sky and wondered how it all got there. But the cosmologists don't have all the answers either. No one does.

Saudi Arabia coming in well at 0315 on 15170 with prayers. Signal level jumps around a bit, but is about S7 or so with no fading. I don't have a list of Mideast countries broadcasting at this time at hand, so I can't check to see if they're coming in too, but they should.

Cuba is coming in very strongly too, stronger than usual, S9+40, so propagation may be getting better. It's about time.

Indeed. Collectors have different motives than users when buying an
item. Collectors want items for reasons that a user can't fathom.

What kind of preselection design do you use ahead of the first mixer
stage?

Would like to hear your catches, mods, tips, etc.

I have purchased the maintenance manual for this rig. I think I've figured out how to disable the attenuator that kicks in on MW reception but have not tried it. Anyone else ever try doing this?
B

I couldn't pick up anything on 8983 this evening... oh well, I tried.
Occasionally I can hear iron oar freighters on the Great Lakes during the
summer months, but as I don't have the best of all possible antennas at my
current location, I don't listen to the utility part of the SW bands much
right now.

Still, I hope that one day the propagation gods will smile upon me, and that
I'll be able to hear fishing boats off the east coast, with their requisite
assemblage of colorful characters engaged in a good argument or three. :)

Increasing numbers of fundie parents are doing just that. However, I wonder what kids homeschooled in Biblical literalism and then educated in fundie universities in "Biblical Science" will do with themselves once they find out that they have zero skills and are unemployable not only because they haven't been correctly educated but they tend to "witness" (preach) their fundie-ism all the time at everybody they meet. What will happen when their prospective employer questions their fundie education and their response is "REPENT, ye minion of Satan! How DARE you question the Words of God?" Uh, don't call us, we'll call you. Saudi Arabia shows what happens when religion based education runs amok-most Saudi university graduates are schooled in Islamic literalism and are utterly unemployable by the big oil firms. The government's attempt to "Saudi-ize" the foreigner-run oil firms has met with abject failure, because thousands of Saudis are graduating school able to recite the Quran and spout the "correct" interpretations but do little else. This results in masses of unemployable young men with nothing to do, always a bad omen for any society. And the government has given too much power to the imams who are more interested in saving souls than in actual education. The US isn't there-yet-but it's headed in that direction.

I do not understand the view point of price and performance. If you are going to rate radios then rate them on how they perform. Price is a separate issue.

I disagree that selective fading is less common then adjacent channel interference. The adjacent channel interference would be less common if the reviewer spent more time with radios that have better dynamic range and shaped filters. The selective fading is a result of propagation.

I'm not sold on the cheap Chinese portables.

The sad part is that he's not brain damaged at all. He considers himself to be ABOVE average intelligence and has so stated publicly. It's people like him who start unprovoked wars and kill women and children for profit.

Thank God most Americans are decent human beings and do NOT reflect cuhulin's or dxAce's world views. Please forgive them both, as the ravages of alcoholism are obviously in evidence in both their cases.

The sad part is that he's not brain damaged at all. He considers himself to
be
ABOVE average intelligence and has so stated publicly. It's people like him
who
start unprovoked wars and kill women and children for profit.

Thank God most Americans are decent human beings and do NOT reflect
cuhulin's or
dxAce's world views. Please forgive them both, as the ravages of alcoholism
are
obviously in evidence in both their cases.

Yes, it has the up converter. A toggle switch in the rear selects hf or vhf/uhf. I have to tune 105000 to get 5000 MHz. It has the NTSC video unit also installed. I've read that this was perhaps not the most dependable set that Yaesu has ever made, but I've had good luck so far and the FRG 7 needed the company.

Another poster recently asked about the CAT cable for these sets. That was what got me to dust off this radio. I will be getting the stuff needed to make a cable sometine in the next few days/weeks.

It's a fairly good performing set, but makes a poor (read slow) scanner.

Just as I suspected Steve. You're a good person :)

BTW, what gets me about the 7030 is it doesn't have sync unless you upgrade to it if I'm not mistaken. And yeah, if you're going to drop over 8 bills already, spring for a new one.

> seller ?
>

Captain,

Don't know if they still run this special since the radio is discontinued, but, if you order on a certain saturday, you get an automatic $50 off. The price was $525, but since I got the Sat special, it cost $475. Then there was a rebate for $50 which brought it down to $425 with free shipping. This was from www.hamradio.com

They still have free shipping I see. Write them and ask about that sat deal. But you know, the radio is still worth the $525 brand new.

Some of the inexpensive chinese radios represent good value for the money but that is about it. They are not the stellar performers some reviews make them out to be. As an example the DE1103 hears a lot of signals, and the filters actually do work, if not perfectly. It comes with a couple of significant shortcomings such as image signals, poorly designed memories and mediocre ergonomics. Still, it represents good value at $65.00.

He is currently WW2PT, and apparently started with Gilfer, then went to Japan
Radio, then returned to Gilfer as President before it folded.

Why do people (including myself) buy self-winding watches with jeweled movements? How about old Leica cameras?
It's the appreciation of a certain quality of machining. It is very easy to design a synthesized receiver that has digital readout.....I have done several of them. Now, to have a receiver that has mechanical tuning AND good accuracy. That is quite a different story. Why would Dale do such a thing? Because he wants to.

>to it if I'm not mistaken. And yeah, if you're going to drop over 8
bills
>already, spring for a new one

Hello "Lucky'"

The AOR AR7030 Plus does indeed have a synchronous circuit fitted as standard. It is the notch filter/noise blanker that is optional. The four standard filters offered are excellent and well-chosen.

Really the radio (Plus version) needs only one option: that NB7030 notch filter/noise blanker. The TW7030 whip antenna (just to get you started; it actually works quite well) is nice to have also and is very inexpensive. By the way, this whip antenna, which is sold by Universal, also works with any receiver with a SO-239 input.

If you are in the least interested in the radio you can "research" it here:

http://www.aoruk.com/ar7030.htm

The site has everything you would need to know (including the instruction manual).

Personally I think this radio is the finest short wave radio being manufactured today. It is certainly the best one I have ever experienced or owned. Larry Magne, in PASSPORT, says its owners consider it to be the "ne plus ultra" of radios.

I positively agree with that statement.

Best,

Joe

So you murder carrots and potatoes, grains, etc? To suggest that plants are somehow "less" than animals is species-ist (racism applied to other forms of life). Ever swatted a mosquito, taken an antibiotic or washed your hands? I wonder how many life forms die everyday from these activities?

To say the seal hunt is unnecessary is to apply beliefs from foreign cultures on others, a form of neo-colonialism. It is very easy to sit in a warm building or house with all the trappings of civilisation and judge those who live in primitive conditions, where they are trying to eke out a life. Before you judge the seal hunt as unnecessary and unjust, visit Nfld and Labrador and see how the people live, and how they make their living. Many communities have no power, no centralized water source, no plumbing, no services. People live in these areas like they have for 1000's of years in the case of the Innu and 400 years in the case of the immigrants. In the cold, on the rock and in the bush. Most people have only a faint grasp from images in the media or movies such as the Shipping News. The destruction of a people can begin with the denigration of their lifestyle, traditions and history. It'd do many "civilized" people good to go on a hunt with a traditional people and maybe get preached to back. As the low flying NATO jets cause the moose to loose their pregnancies, and the environment gets destroyed due to the trappings of "modern" civilization. You assume that the images you have seen of sealing are accompanied by thoughts and feelings that you or people you know would have if they undertook the hunt. This is not it at all and very self centred.

I've used one, but couldn't really give you any
specifics, being it's been quite a while...
Do you really need the attenuator cut out?
If you always have a readable noise floor
when not tuned to a station, and is never
dead quiet, there should really be no need to
cut out the attenuator. You don't need much
sensitivity on MW for general use..MK

<<

Once again, accosted by an apologist for the murder industries who uses false logic and ridiculous analogies to uphold both the murderers and his own chosen lifestyle. It is this simple, Arnie:

I do not need meat to thrive. The killing of anything I do not need to survive is unjustified. Therefore, the killing of animals and eating them is unjustified, unless it is in self-defense or a life-or-death emergency.

Where the eating of foods is necessary to survive (and to survive I do need to eat something), then it is justified. This why it is OK for seals to eat fish.

Maybe the people who choose to live on rocks and bushes made a damn poor choice. In any case, it is not OK to kill a huge proportion of the seal population to sell off furs and increase the fisheries, which off the east coast have been grossly depleted by rampant fishing. If they need to kill some seals to get through a particularly harsh winter, fine - but you won't convince me that wholesale slaughter is justified at all.

Beyond this, it is impossible to have a logical discussion about almost anything controversial on this medium with a person who argues using illogism, so I won't even try. Suffice it to say that I choose to take the least harmful and least cruel way. You may choose to take a more cruel way; that is still perfectly legal, if morally bankrupt. If you post supporting cruelty, I will point out where I think you're a barbarian. I don't especially care if you like it or not, agree with it or not.

The last word is yours.

> federal court) and then you will be executed. OTOH, you will be famous,
> a part of American history. Oswald proved that all that a loser with a
> gun has to do is kill the president and he will get fame far beyond what
> he deserves. Go ahead, collect your ammo, test it out, because you only
> get one shot.

No one said anything about guns and assassination as in killing you half wit idiot. The word ammunition does not exclusivily apply to bullets, it can also apply to information that can be used as ammunition, as in information, to be used against someone, such as evidence in a murder case that can be used as ammunition to convict. Nor does the word assassination apply exclusively to killing someone. Ever heard of political or character assassination?

From the dictionary, notice the last entry #4.
1. Projectiles, such as bullets and shot, together with their fuses and primers, that can be fired from guns or otherwise propelled.
2. Nuclear, biological, chemical, or explosive material, such as rockets or grenades, that are used as weapons.

3. An object used as a missile in offense or defense: Rocks were my only ammunition against the bear.
4. A means of attacking or defending an argument, thesis, or point of view.

So before you blow off your mouth again, learn the definition of something before you start making stupid accusations.

It's not a matter of poor understanding, it's a deliberate program of
mis-education.

One of the major techniques for the right wing political machine in
America is jamming. Like jamming in the radio spectrum, jamming in the
ideological spectrum consists of dropping a loud signal on top of another
program and hoping that the listening population gets so confused that
they can't hear the original signal.

Most of these anti-experts are employed by various think tanks
where their income is safe from considerations of peer review, tenure,
and any real debate about their ideas. One of the major sources of the
anti-evolution propaganda is the Discovery Institute here in Seattle.

From there, they get equal time on the major media (who is either
owned by the part of the machine, or are intimidated into accepting this
pseudo-expertise). Other channels to the public come from feeding ideas
to the conservative churches and their educational affiliates.

The point is to destroy the reputation of expertise that the real experts
have so that the public is scared or confused and more vulnerable to
the PR/propaganda at election time.

The current example is the doctor that Jed Bush dug out from under a
rock who's claiming that Mrs. Shiavo isn't a vegetable. But there are
other partisan science whores that specialize in atmospheric science
and evolution. (Hey, those oil companies pay good money and you don't
have to go to the bother of teaching those nasty students).

And the unit used in the movie Frequency was a Heathkit receiver, not a transceiver, it couldn't even transmit.

Heard today at ~ 1200 UTC on 6020 "Late Night Live". Interview w/ the Nun Prejean whose story was adapted in the movie "Dead Man Walking". She said 8/10 executions are black people convicted of killing whites by white juries, talked of sloppy defence representation, the harrowing experience of people being taken to the execution area several times only to have last minute stays, how politicians brag about how many people were executed under their watch, how "closure" does not occur for victims' families - although assumed to - by watching the convicted die. She also spoke of the wrongly convicted. Bush apparently spent 15 minutes each on a series of files sent to be done to death. He doesn't sound like he's from the same religion as me if he's so cavalier about death.

The theme stated at the end was how a violent society feels it should solve everything by more violence. Bombs internationally, executions locally. And the peculiar religious fundamentalist idea of protecting unborn children combined with execute others. One weird thing was that they actually alcohol swab the arm of the condemned before inserting the lethal injection IV. Why?

It's the font that Leonard's newsreader is using for the ISO-8859-2
character encoding.

The header in your message is setting the encoding to ISO-8859-2,
the character set for eastern and central European languages.
English normally uses ISO-8859-1.

I respect your response, but it is still ethnocentric. Will you take people into your country as immigrants so they don't have to live this way. You personally do not have to eat meat to survive, but that does not allow you or any one else to look down their noses in a "holier than thou" manner on others. What is a "life or death" emergency? Is it okay for someone to hunt so they can provide minimal sustenance to their family? or should the children have no opportunity beyond their parents. Nfld has exported more people than most other jurisdictions b/c their parents did what they had to do to survive and provide opportunity to their kids. And yes this included importing moose from the mainland (where they didn't previously live) as a food source for the people. You cannot grow a garden in Nfld. It's rocks and trees and no vegetables grow in the harsh climate. So everything is either imported or local. And all there is is canned stuff in the stores, or very expensive fresh things, and fish and game. So they hunt some seals so they can buy some canned fruit, notebooks for the kids, coats and shoes. Gas for the boat. I really think you have no idea.

Would you move the Inuit out of the arctic also? (Inuit = what you may call Eskimo).

I don't think the last word is mine. You suggest "illogism". I suggest not judging others by your external standards of morality.

Yep,I do own one.It was sitting on top of one of my footlockers that is crammed full of some of my other old radios.I bought it for a few dollars at a Goodwill thrift store about eight years ago.It isn't in the best of condition though,in fact,I would say it is in lousy condition.The top front panel that is suppose to cover the dial area is missing and I seem to remember the radio does not work at all.So I am sure it isn't worth as much money as it would be if was in decent condition.I wonder why the radio will not work? I sure would like to get it working so I can try it out.I remember I did once put some new batteries in the radio years ago and it wouldn't make a sound at all.Anybody have any ideas? I don't know much about working on radios.Regardless,I will not sell or trade any of my radios whether they work or not.

Jay Davis: Listening to history speak
(March 24): This column first appeared in the March 16, 2005 edition of the VillageSoup Citizen.

"Eighty years ago this week Belfast (in Waldo County) was at the heart of an international technological breakthrough. An RCA long-wave station located near the present Belfast Armory received the first live radio signal beamed across the Atlantic and passed it on to a New York radio station that then broadcast the first live sound from Europe.

The Belfast Museum has developed a full file on the historic event that includes a tape of the actual transmission, newspaper articles from the time, and physical remains of the cutting-edge technology, including copper wire, concrete blocks that anchored the guy wires for the 10 miles of posts and wires that made up a Beverage antenna and photographs from the Smithsonian Museum in Washington, D.C.

Belfast Historical Society President Megan Pinette assembled the memorabilia with the help of volunteer Bruce Clark, a HAM radio operator and electronic technician who will conduct an archaeological dig at the site this summer. The story Pinette and Clark tell should warm the hearts of all who know Belfast isn't just a disconnected outpost on the edge of the tundra.

During the early years of the 20th century, companies like RCA, AT&T, International Telephone and Telegraph and GE conducted far-reaching experiments in broadcast technology. Belfast was the home to several installations that received Morse code messages from ships at sea and Europe because of its elevated location near the Atlantic. A BBC contest to find the best reception site in the U.S. for transatlantic messages was won by HAM operator Earl White of Searsport Avenue in 1923 or '24.

The RCA offices were in a wooden building near the present airport where signals were received from a 10-mile Beverage antenna that stretched from Belfast to Moody Mountain in Searsmont along a rigidly straight route. The station used long-wave technology, which was soon superseded by short-wave, ending its usefulness in 1929.

But for a few brief years, Belfast was on the cutting edge of broadcasting. In 1921, Gen. David Sarnoff, head of RCA and one of America's best-known entrepreneurs, visited with his wife to check out the local operation, staying at the downtown Windsor Hotel. In 1926 RCA constructed a modern brick building to house a permanent installation in Belfast. It remains today as the main office of the Belfast Armory. Plans were made for additional Beverage antennas that would run perpendicular to the Moody Mountain line.

On March 14, 1925, the big day arrived. A broadcast that originated from the Savoy Hotel ballroom in London was sent over land wires to a high-power station at the English coast, in Chelmsford. From there the signals were transferred to a 20,000-watt transmitter and beamed across the Atlantic to Belfast, where they were received by a super-heterodyne receiver attached to the 10-mile antenna. Re-amplified, the signals were fed into a short-wave transmitter and sent to the RCA station at Van Cortlandt Park in New York, then to the land-wire system of station WJX, which broadcast them live.

That description comes from a publication called World Wide Wireless, which should know whereof it speaks. It said the message reached the ears of American radio listeners in one-fiftieth of a second, a bit faster than it was heard by the audience in London.

The transmission interrupted existing programming on the popular station, and the introductory message noted the Belfast connection. It was through such experiments that international broadcasting was born. Alas, the city's involvement was short-lived. The RCA staff was sent to Long Island in 1929, along with some of the equipment, and the buildings were abandoned until the Armory took over in 1941.

The Belfast Museum is becoming an increasingly intriguing place under the energetic leadership of Pinette and a hardy band of volunteers. George Squibb showed me last week how records are being catalogued and preserved in archival correctness; I'll have more to write about that in the near future.

The RCA adventure might well have slipped beneath the local radar if not for Pinette and Bruce Clark. The legacy of Capt. Albert Stevens, now the namesake for the new Belfast elementary school, might have, too. The Historical Society and the Museum deserve our great thanks. It's a place where history speaks to us, literally.

4152. HAM Radio Deluxe

Newsgroup: rec.radio.shortwave
Date: 2005-03-24 20:18:44 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns96239BC30C75BTheDoctorisin@216.168.3.44>
Source record: 13738

This is a repost from a post that I did concerning my frustration finding suitable software for the Icom R-75 (and many other radios). I believe that some of you may have missed it. This software bears serious mention.

Dr. Artaud

Having forestalled my purchase of RX Plus (I used the Demo period, very nice program), due to my concerns about not being able to use the program on a future computer, I happened to download HAM Radio Deluxe.

Superb. Has anyone here tried it? I use the Icom R-75, (among others, but for the sake of discussion), with the serial port connection to my laptop. Well, to be more specific, the R-75 Serial connection to the USB on my laptop.

Anyway, it was my understanding that I needed a CAT connection to use HAM Radio Deluxe, but apparently not. I had a friend (his DSL vs. my Dial UP) download the CD Image (image being a compilation of files, not a picture), initially a zip file 69 MB in size, that is unzipped onto the CD, producing a CD suitable for distribution (at HAM clubs, to friends, etc, but it must be distributed free). Loaded it onto my computer, and ran the program, figuring that I could learn something about it before purchasing the CAT adapter. I was astonished to see that the display in HAM Radio Deluxe had the same frequency as my radio, which was on at the time. Moved the volume control in the program, and the radio grew silent. Moved it the other way, louder. It was actually working.

http://hrd.ham-radio.ch/index.html

This program is great. I downloaded the version 3.0, but I think that in order to have the bandscope, the Beta version 3.1 Build 579 or later is needed.
http://www.ham-radio.ch/kits/CD%20Images/Betas/3.1/HRDCDv031b579.zip

The official released version, 3.0 Build 531
http://www.ham-radio.ch/kits/CD%20Images/Release/3.0/HRDCDv030b531.zip

Though I had a CD made of the Official Release version, downloading and installing the Beta Kits, available here, brought the software up to the level I needed for the bandscope.
http://hrd.ham-radio.ch/downloads.html#Beta_Kits
They are 7 MB in size, and simply install over the existing software.

Anyway, all the controls seem to be available and functioning. This through the USB port, to a USB to Serial converter that I bought through RT systems (they sell Amateur Radio Software).

It has to be seen to be believed. There is literally too much to write about. Bandscope (in versions 3.1 Build 579 and up) volume, squelch, Dual Passband Tuning Controls, RF Gain, NR Level, and much more. And it's free. Kudos to the writers of this great program.

Dr. Artaud

Unfortunately, you are entirely correct...

Thought I would add a little tidbit I heard yesterday. There are
IMAX theaters in the southern U.S. that are refusing to show a new
movie about volcanoes, because of a passing reference in it to
evolution. They are afraid of a backlash from the evangelicals.

4162. Shortwave KOOK pops-a-gasket on the air over Terri S

Newsgroup: rec.radio.shortwave
Date: 2005-03-24 21:06:21 UTC
From: RF Bozos on Shortwave <offsetwashers@yahoo.nosp.com>
Message-ID: <c661d$42432bff$d1cc4170$28807@snip.allthenewsgroups.com>
Source record: 13747

Did Y'all happen to catch last evening's Sweet Liberty
broadcast on WWRB (..or is it WWCR?) at 9:00 PM ?
This is the program with the female host who seems to be
a cross between a genuine psychotic and Ulma-the-she-cat
from those tacky 80's horror videos of the same genre....

It had to be one of the most kook-filled rants I've heard
on the short-wave in quite some time. Whoever the host is kept
going on about some totally OFF THE WALL Conspiracy
Theory about how "they" (whoever the phuck --> "they"are...)
are deliberately trying to *time the demise* of PVS stricken
Terri Schiavo with the Jewish holiday of Purim or something
similar, the implication being that this whole event is some kind
of a macabre staged event by the New World Order to placate
someone or something into giving us a good balance-of-the-Year
time or something along these lines........

WHOOP! WHOOP! WHOOP!
Tinfoil Hat Alert - BONG! BONG!!

"...Calling Dr. Howard - Dr. Fine - Dr. Howard...Dr. Howard report
to room 66, Dr. Fine Room 72, Dr. Howard Room 83..!!"

I mean folks...I've heard some GOOFY SHIT on Domestic Short-Wave
radio broadcasts, but this has to be the most f--ked up load of deterius
I've heard to date, bar none.

Who the heck was/is this nutcase I stumbled upon last night?
Don't recall if it was 5.085 or 5.070 but it was in the 9:00 to
10:00 PM time slot and was like something out of the freakin
Twilight Zone. Anyone can tell me what/who this was and
if they were using a microphone from the State Mental Health
Unit...?

Coming in here at 1920 3/23 (early morning 3/24 here) with news and commentary and several station IDs. Bland programming but a nice catch. Fluttery fade but fair signal.

Al, CNMI

Definitely a decent morning for Africans, with ORTB Benin coming in
fair with a fluttery fade and some heavy duty splatter from the
Solomon islands on 5020 at 1943. Some drum music and FR chatter.
Nice to hear something on this frequency besides Rebelde!

Al in CNMI

I will take a look at Ham-Radio to see if it will support
the Icom PCR1000. I recently traded for one and would
like a better program then what Icom supplies. I had it
loaned to a friend until he got his "new" NRD525??.
I have been using the '1000 for the last week and I am
more then a little underwealmed by both the radio and
Icoms sad sofware.

Terry.

>>+ Facts about the World Around Us.
[Religion is a "Very Real" Fact in the World Around Us] <<

Religion is real, but as a "fact" it is a human construct. Yes, there are religions - many, all of whom have equal claims to the notion that theirs is the correct one - but they are all human constructs. Mythology exists as a part of human sociology, but that does not make its content factual.

There may be a place for religion in school - if so, it is in the social studies area, where human charateristics are examined. It is certainly not in science class. Religion cannot, by its nature, be a science; it is not even a theory by any accepted definition. In all its forms, religion is a cultural phenomenon.

This has nothing to do with whether or not God exists or has omnipotence over the universe. That is purely a matter of faith, and is up to the individual. It has to do with whether schools are suitable for passing on cultural or mythological beliefs as fact, which they are not. That is what shortwave radio is for ;-)

No we can't. It's been a problem with mankind from the beginning. Why you ask? Well because. Now don't argue with me! You know I think I'm right and therefore you can not win ;)

P.S. I learned all this from my wife and by the way, did you know that the military is now using these same type of techniques that they learned from their wives to frustrate the f--k out of the enemy?

This is one circumstance in which I am 100% in agreement with Bush and the
CONgress. Always err on the side of life.

My main question to Mr. Schaivo would be.... if it really was Terri's wish
not to be kept alive "artificially", then why did it take so long for him to
decide to honor her wish? Surely this thing hasn't been in court the entire
15 years??

I'm looking for Frank Cathell, an old friend, and was unable to locate
him via his old email address, fcathell@aol.com. Would anyone who
knows his current email address, or Frank himself, please contact me at
dxlstnr@aol.com? T.I.A.

4196. E1 or Satellit 900

Newsgroup: rec.radio.shortwave
Date: 2005-03-25 01:06:19 UTC
From: FireStarter5 <5retratserif@liamtoh.com>
Message-ID: <424365f4$0$30515$2c56edd9@news.cablerocket.com>
Source record: 13781

I was under the impression the E1 was a brand spanking new designed radio.
(I'm not involved in SW as most of the posters here so my misunderstanding
should be expected)

The following two links show a Satellit 900 and the E1. Other than XM and
perhaps some LCD differences what is the hoopla regarding the new E1? Is it
just because of the XM capability?

http://www.satellit700.com/900/satellit900.html

Few radios bring big innovations in design, so I wouldn't criticize the E1 on that score. It's a new Eton model that has a relatively unique collection of features. Now, we must of course simply laugh at the idea that outfitting the E1 with XM is any kind of 'breakthrough', but the E1 is a new model and it will appeal to some people. End of story.

As for the hoopla, I'm as puzzled by it as you are.

Steve

4200. KA1101 began eating battery power...

Newsgroup: rec.radio.shortwave
Date: 2005-03-25 01:34:38 UTC
From: Michael <md1966@optonline.net>
Message-ID: <NUJ0e.1904$cQ2.1082@fe12.lga>
Source record: 13785

My KA-1101 has begun eating battery power at a tremendous rate. I've had this radio for over a year, and it will go close to 40 hours on a full charge. As of the past few weeks, it will only go about 12 hours on a full charge. At first, I thought I had purchased a bad set of rechargeable batteries, so I went out and got a new set. I employed the new set of batteries, and it still drained out in about 10 hours. I did a test with non rechargeable AA cells, and found that it ate those up way to quickly too.

My best guess tells me that it has developed a non critical short.

My KA-1102 has always had a defect with the volume always coming on full blast after power up, and now, my KA-1101 has developed problems too.

Both are good performing radios for their price, but they have quality/construction problems.

Now I'm waiting for my PL-550 to start crapping out. I'm not disparaging Chinese consumer products, but I am respectfully pointing out that they have a way to go yet. That statement applies for both their manufacturing procedures and their sociopolitical ideologies.

I look forward to the time when I can by a Chinese radio that will have the same quality as an American, German, Japanese radio. Not to mention, that such a Chinese radio will also be made by people that are guaranteed under law to have the same freedoms, human rights and quality of life guaranteed to those who design, assemble and sell great radios like Drake, and Icom.

Stay with it over there... You'll get it right eventually...

Michael

4202. Pastor Peters comes on ONE HOUR EARLY tonight

Newsgroup: rec.radio.shortwave
Date: 2005-03-25 01:44:18 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <1146r7ljd6kqsc4@corp.supernews.com>
Source record: 13787

FYI:

Pastor Peters comes on one hour earlier tonight - at 21:00 EST instead of 22:00 EST. That's 02:00 UTC instead of 03:00 UTC.

Locations: 5.070 MHz WWCR, Telstar 5 radio only and at http://www.scripturesforamerica.org you can listen online.

The programs are also archived for at least 30 days so you can download it and listen whenever it is convenient.

He'll be on for two hours. The second hour will repeat at 04:00 EST / 09:00 UTC at the same locations.

4203. The MYTH and LEGEND of the "Grundig Satellit 900" {Eton 'Elite' E1 XM Radio}

I agree with honoring her wishes. I just can't believe how we let ourselves suffer. Why don't we inject people so they don't have too go through hell. My dad laid in a bed dieing of cancer asking for the gun. My grandfather couldn't eat because of a stroke and other things. He essentially died of starvation and just plain suffered. Heaven forbid we go out peacefully. I don't get it?

Self firing guns? Push a button and the gun does the rest? And when the gun kills all the innocent students in the class too, the parents can't sue because "it was the gun's fault"?

Also, if the gun box can be opened with the push of a button, it's not exactly in a "safe lock box", is it?

These are the same people who suggested arming first graders after that girl was shot in Michigan. Do you think a six year old can be taught to use a gun responsibly, considering all the six year olds who play with "toy" guns only to discover that the gun is NOT a toy and that their best friend is dead?

That's what I love about kooks, they're so easy to make fun of because they don't have the mental capacity to think through their inane ideas. Put a kook in front of a mike, speaking off the cuff, and it's even more fun. That's why SW radio is Kook Central, any kook who can pay the dough can get on the air and make a total fool of himself (usually a him, except in rare cases).

Until they "get it right", politically and technologically,
may I suggest you support the company that has been a leader
in portable radios for decades? For all the hard earned money
you spent buying multiple cheap Chinese radio's with very little to ZERO
advancement in the Art of radio design, I suggest you support the
last great company who still knows how to design and build a decent
portable SW radio - SONY! Specifically get yourself a 7600GR.
It outclasses them all in that price range - PERIOD!

A portable for the people!
http://groups.yahoo.com/group/7600GR
http://groups.yahoo.com/group/7600group

The best true portable of all time:
http://groups.yahoo.com/group/sw55

The best porta-tops of all time!
http://groups.yahoo.com/group/icf2010
http://groups.yahoo.com/group/SONYICFSW77

The ultimate in pocket portables!
http://groups.yahoo.com/group/SW07
http://groups.yahoo.com/group/SonyICF-sw100

Notice most of the above radios were designed over
a decade ago. Kaito/Degan & Tecsun haven't even come
close to Sony's 10-15+ year old technology. Yet, many
of those old radios are still around performing yeoman's
duty.

Support Sony or say goodbye, just like the R8B & R75.

The "husband" (he's shacking with another gal and has two bastard babies by her, yet claims to LOVE Terri and have her "best interest" at heart!) is ALLEGEDLY "honoring" his wife's ALLEGED wish. There is NOTHING in writing.

Actually, one doctor indicated that the injuries to her neck probably came from strangulation. Also there was a history of spousal abuse. etc., etc., etc.

Therefore, it appears to some that he thinks he MUST kill her to prevent her from testifying as to what actually happened -- that HE attempted to murder her.

Also, why the rush to have her cremated AS SOON AS SHE IS DEAD? Is this to be sure no autopsy is performed?

I think Jeb Bush should demand the feeding tube be re-inserted and that she be moved from that "hospital" for her own safety, that her parents who REALLY love her be declared legal guardians and Michael be forbidden to go any place close to her -- not even in three miles of the hospital she would then reside in.

Her parents told him to KEEP THE MONEY just let us have our girl back. Someone else even offered to pay the greedy SOB a couple more million just to walk out and let Terri's parents have her!

NO. He INSISTS she be destroyed. It seems some other SNAKES have the same goal.

I pray that every SOB who has stood in the way of her living, including Michael, judges and attorneys, suffer all that Terri AND HER PARENTS have suffered. May they all come down with leprosy, AIDS and Ebola at the same time but live for 15 years with the most miserable suffering that can be imagined! :-)

Prove it. There's nothing in writing - just the words of her husband
(who, maybe not coincidentally, has denied her rehabilitation, and
stands to gain a million dollars at her death).

I'd point out that we have no proof whatsoever, but I see what you are saying.

Sickest of all, is the fact that MDs can lose their licenses for prescribing "too much" pain medication to terminal patients, so they deliberately end up undermedicating patients.

WTF are they afraid of, that the patient might die? It's sickening. (no pun intended)

73,

Steve in Burnsville

I already beat you to it.

I have a 7600gr and it is by far my favorite of all the portables out
there. Any one here that has read any of my posts on portables knows that I
talk very fondly of the 7600gr. Quite an amazing radio. It is also one of my
favorite radios to use for MW DX'ing. The AM sync is key.

Except that it's not the father's decision. The husband is honoring
his wife's wish to not be kept alive. ......

According to *him*....As far as I know, there was never
anything in writing...It's all hearsay.

This kind of thing happens every day folks. My family pulled the
plug on my grandmother - 30 years ago. No one noticed. She wanted
to go - and she went. ....

Yea, but you are probably talking about a terminal disease. Cancer,
etc,etc...She has no terminal disease. In order to kill her, they
are required to starve her to death.
One of my younger brothers had a brain stem rupture this past year,
and we had to choose this thing ourselves. But he had no chance
whatsoever, and he died on his own, even with nutrition.
It's not quite the same thing..Ditto for many other recent cases
I can think of personally...One of the guys I worked with died
of cancer last summer. He eventually decided to starve *himself* to
death. And he did...He went to bed, refused all food, water, etc,
and it took him about 1-2 weeks..But he was also 90 years old...
I went to so many funerals last year, I call "2004", the year of
the funeral...
Myself, I think it's fairly pathetic that they are doing this,
with *nothing* in writing from her. Now, if she had a living will,
yea, you would have a point. But she didn't. For all we know, her
asshole husband could have helped caused the condition that placed
her in the hospital in the first place.
Not to mention, she doesn't look quite as bad to me, as some would
lead me to believe..And the doctors are mixed on this also...It's
not just me. Dunno...I think it's murder with a legal twist...
Her husband may hold all the legal cards, but he's already left her,
and
gone to a new women. With that, I think her parents should have more
say so in the matter, now. I think it's pitiful that the powers at
large
are telling her parents that "we are going to kill your daughter
by inhumane starvation, and there is not a damn thing you will be
able to do about it". I agree with one poster...I'd be in that hospital

tearing me some new asshole. Pathetic...MK

To All Canada Bashers,
I don't care to argue with you about your sentiments toward Canada; they are your beliefs (some of which I share) and a product of your experiences and after all - your beliefs to which you are certainly entitled. For some of you, Canada's position on the US involvement in Iraq is a big thorn in the side, as is Canada's history of taking in US citizens avoiding the draft. With regard to that, I offer this link, while not trying to change your minds - you may find that Canada just did something that you approve of.
http://apnews.myway.com/article/20050325/D891NERG0.html

A good evening to all and to all low noise floor, good propagation and happy SWL'ing.

I really think you guys involved in this thread need to read this. I normally dislike blogs, but this one's a bit different.

http://abstractappeal.com/schiavo/infopage.html

Here's a couple of quotes from there to whet your appetite.

<quote>

The facts of this case are terribly sad, but they are not hard to understand. There's really nothing to be confused about, and as best I can tell, nothing's been overlooked by anyone. Terri's situation has arguably received more judicial attention, more medical attention, more executive attention, and more "due process," than any other guardianship case in history. Terri's family has had the benefit of excellent legal representation as well as the Governor's own top-notch attorneys, all of whom have scoured the case for ways to assist the effort to keep Terri's feeding tube in place.

<end quote>

And here's interesting quote number two:

<quote>

Why did Terri's husband get to make the decision about whether she should live or die?

Michael Schiavo did not make the decision to discontinue life-prolonging measures for Terri.

As Terri's husband, Michael has been her guardian and her surrogate decision-maker. By 1998, though -- eight years after the trauma that produced Terri's situation -- Michael and Terri's parents disagreed over the proper course for her.

Rather than make the decision himself, Michael followed a procedure permitted by Florida courts by which a surrogate such as Michael can petition a court, asking the court to act as the ward's surrogate and determine what the ward would decide to do. Michael did this, and based on statements Terri made to him and others, he took the position that Terri would not wish to continue life-prolonging measures. The Schindlers took the position that Terri would continue life-prolonging measures. Under this procedure, the trial court becomes the surrogate decision-maker, and that is what happened in this case.

The trial court in this case held a trial on the dispute. Both sides were given opportunities to present their views and the evidence supporting those

views. Afterwards, the trial court determined that, even applying the "clear and convincing evidence" standard -- the highest burden of proof used in civil cases -- the evidence showed that Terri would not wish to continue life-prolonging measures.

<end quote>

What I like about this guy's site, which bills itself as "The first weblog devoted to Florida law and the Eleventh Circuit Court of Appeals", is this quote:

"I encourage anyone interested in this case to read the judicial decisions that have been entered. Most informative, from a factual point of view, are Judge Greer's orders and the Second District's decisions."

And of course, he provides those documents for you to read. I wonder how many people in this country talking about this issue have bothered to look at these documents.

No I don't.

Be sure to click on the "Home Page" link. There are more links to the legal documents there.

I see the force of the considerations on both sides of this one. No parent wants to bury their child. The heartbreak has to be unbearable. At the same time, I actually have a 'living will' precisely because, if I'm ever in a permanent vegetative state, I don't want to continue indefinitely in such a condition, and I'd have real trouble resigning a loved one to such a fate.

I feel bad for everyone involved in this case. There are no winners.

Steve

dxAce thinks that it was Sweet Liberty, but I think SL has a male host.
The only real female kook out there is somebody who's name I THINK is
Jackie Patru and the show is The Divided Kingdom. She's got this
incredible falsetto voice that's like nothing else on SW, and she uses
sock puppets to explain her positions. I would think that this is who
you heard.

Kooks have used the idea that the NWO does human sacrifices in the name
of Satan before.

4231. Re: HAM Radio Deluxe

Newsgroup: rec.radio.shortwave
Date: 2005-03-25 04:15:35 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns9623EC9B163C2TheDoctorisin@216.168.3.44>
Source record: 13616

r2000swler@hotmail.com wrote in news:1111703132.075337.47200
@f14g2000cwb.googlegroups.com:

AS I stated, here is a misleading description from the HAM Radio Deluxe
web site:

"Introduction
Ham Radio Deluxe (HRD) is a suite of free Windows programs providing CAT
control for commonly used transceivers and receivers."

Notice that it says "CAT control". This is why I never downloaded it.
When I became frustrated trying to find suitable software that uses the
Icom R-75 Serial Port, I decided to download it with the intent of
buying/making the required CAT interface. After loading it onto my
computer, I ran the program to become familiar with it until I obtained
the correct interface. I was surprised to see that it was supporting the
computer's serial port (or more correctly, USB to Serial Port Adapter).

It's very thorough, all the controls that I can think of are available as
well as the Band Scope on the more recent versions of the program. This
makes scanning a particular range of frequencies a breeze. Just enter the
upper and lower scan range and wait for the completion of the scan. Then
you just click on various peaks that you suspect represent signals and
the radio tunes to those frequencies.

From what I can see, the photos on the site do not do the program any
justice, as I was more interested in pragmatic controls, i.e. whatever is
available on the radio face or perhaps in the radio menus, versus the
other excellent capabilities that HAM Radio Deluxe has. Also, the R-75 is
simpler than the example that they give here of the Icom 7800 (?)
http://hrd.ham-radio.ch/HRD-IC-7800.JPG therefore my setup appears much
less cluttered. The program is highly customizable.

Their web site lists the PCR-1000, as well as the following radios as
being supported:

http://hrd.ham-radio.ch/index.html

Elecraft K2

ICOM IC-703, IC-706, IC-706MkII, IC-706MkIIG, IC-707, IC-718, IC-725, IC-
726, IC-728, IC-729, IC-735, IC-736, IC-737, IC-738, IC-7400, IC-746, IC-
746Pro, IC-751A, IC-751A (Piexx), IC-756, IC-756Pro, IC-756ProII, IC-
756ProIII, IC-761, IC-765, IC-775DSP, IC-7800, IC-781, IC-821H, IC-910H,
IC-R10, IC-R20, IC-R75, IC-R8500, PCR-1000

Kenwood R-5000, TS-140S, TS-2000, TS-440S, TS-450S, TS-480, TS-50S, TS-570, TS-60S, TS-680S, TS-690S, TS-790, TS-850, TS-870, TS-940S, TS-950, TS-B2000

Ten-Tec Argonaut, Jupiter, Orion, RX-350

Yaesu FT-100, FT-1000D, FT-1000MP MkV, FT-600, FT-817, FT-840, FT-847, FT-857, FT-890, FT-897, FT-900, FT-920, FT-990

Once again, everywhere I see references to HAM Radio Deluxe, they refer to it as CAT control software, yet I'm using it to interface with the radio's serial port.

Read the reviews at: http://www.eham.net/reviews/detail/3498

Don't be fooled by some of the photos, like the one at eham for the reviews above. The interface is superlative.

See here (a link already listed in this post) http://hrd.ham-radio.ch/HRD-IC-7800.JPG Everything that is contained in the black background is all that needs to be shown, the left and bottom menu windows can be closed, and the program itself has a full screen mode.

From one review: "Ham Radio Deluxe is simply OUTSTANDING! It is an evolving work of art. Of all the fine programs that control radios, this one stands out because the GUI provides a large radio dial reminiscent of some of the finer radios in history. Look at the screen shots. But, it goes well beyond a fantastic graphical user interface. When you use this program, you feel like your personal computer IS the radio."

From another: "Hello for those who grew up using and liking old radios that used the Slide Rule Dial. This rig control brings this retro feature into the 21st century in a big way. Every one else has already talked about the great GUI in this program. It is really a neat way to tune around with your rig."

Many other reviews available.

Forward this information to other in this group that you feel may be interested. I'm sure that I'm on many people's plonk files, so they may not see this post.

Regards.

Dr. Artaud

Not by me, that's for sure. Regarding folks leaving and then
coming back under a different guise, I'd like to coin a new
term, in honor of RRS's MongoLloyd Davies: I'll call it the
"Davies Syndrome."

(chuckling)

I know I see all kinds of receivers in use here. Many I wish I could just drop the cash and buy, BUT...

Believe it or not, all of my loggings are on a Sony ICF-2001D and its companion 1-meter active whip antenna! I plan to buy a Palomar Engineers active loop for BCB and tropical bands. I'd like to hear if any of you have any experience with these.

I may be renting an apartment on the beach here, and the water is shallow enough and empty (of boats, etc.) wnough, where I may be able to actually run a beverage out into the ocean in a favorite direction.

As a matter of fact I do, and I can't find any credible source that says
he'll get a million dollars when she dies. I can find more misinformation
and rumor than you can shake a stick at, though.

Here's what you said (and subsequently snipped):

> Prove it. There's nothing in writing - just the words of her husband
> (who, maybe not coincidentally, has denied her rehabilitation, and
> stands to gain a million dollars at her death).

I can't find a single credible source that says he'll inherit any cash, much
less the specific sum of one million dollars. I -can- provide cites like
this one, though. It's
from WSTV in Florida, and is dated 3/16/2005.

From http://www1.wsvn.com/news/articles/local/C71187/:

<quote>

"George Felos, Schiavo's lawyer, said his client never received or had any
control over a $1 million medical malpractice award. Felos said the money is
gone, used for her medical and guardianship expenses. A hospice program is
caring for her now.

"It's not about the money," said Schiavo, who said he will not receive any
life insurance money upon Terri's death. "This is about Terry. It's not
about the Schindlers, it's not about the legislators, it's not about me,
it's about what Terry Schiavo wanted."

<end quote>

I think that the facts of the matter have been spread around and distorted
in the telling to the point where they're almost beyond recognition. If you
have a credible source that shows that he will in fact receive life
insurance money, I'm all ears.

Incidentally, I find this quote from the same source to be noteworthy:

<quote>

"Schiavo, now a father in another relationship, said he would not give guardianship to the Schindlers because of her father's earlier testimony.

"Mr. Schindler testified in court ... to keep Terri alive he would cut her arms and legs off and put her on a ventilator just to keep her alive. So why would I give her to a man that would do that to you?" Schiavo said."

<end quote>

I've also been all over http://www.terrisfight.net/ which is maintained by The Terri Schindler-Schiavo Foundation in conjunction with her family, and I can't find anything there about Schiavo collecting on a life insurance policy. That may be significant, or it may not be.

news:Xns9623E16B48885a216b130c132d203@63.218.45.20:

Euthanasia via the administration of excess amounts of pain medications has been going on for some time. When the patient's family is given control over the medication, it is out of the Doctor's hands how the medication is administered. A terminal patient will not likely elicit an autopsy, since the pending death of the patient is known to the attending Doctor.

The authorities, seeing a deceased terminal patient, without any obvious external wounds, are not likely to pry further. (i.e. no knives, gun shots, ropes, etc.)

My concern lies with recent proclamations about limiting health care costs, pursuant to Medicare. One startling statement said that it will be up to the doctors to determine when the end of life occurs. To most people this would mean a terminal patient being mercifully euthanized by a doctor, but I fear that the application will become widespread, euthanizing patients that are handicapped and of no use to society, as their long term continued care will be more of a burden to the Medicare system (and other health care programs) then the last stages of a terminal patient.

Then too will arise the situation where people diagnosed with a terminal disorder, having the options of life sustaining therapies, so that they may have an additional 6 months or more of life, will be told that these therapies are too much of a burden to society, and that they "must" be shuffled of this mortal coil prematurely. My next door neighbor has had cancer for years now, cancers in the brain, organs, and so forth. Known as CUPS (Cancer of Unknown Primary Source), he has so far been successful in fighting this terrible disease, being there as his children grow, and he undergoes home Chemotherapy. One cannot make rash judgments concerning when "end of life" has been reached.

Terry Schiavo's case is a blemish on the soul of the American people. We are now performing abortions on adults, something that I fear is going to become increasingly common. As another said in this post, it would be illegal to starve an animal to death.

The U.S. Supreme (sic) Court, refusing to hear Terry's case, has heard and ruled on many bizarre cases over the years. One of the cases involved an admitted murdered, also a intravenous drug user over the years. Since he was to be executed by lethal injection and his many years of intravenous drug use had marred his veins, he may suffer as the I.V. was being inserted for his execution, and, if they missed the vein and

administered the lethal injection anyway, he "may" suffer chest pain. The Supreme Court agreed with him and ordered a re-evaluation of his sentence.

Go Figure.

Guns don't kill, people kill.

> Also, if the gun box can be opened with the push of a button, it's not
> exactly in a "safe lock box", is it?

There are lock boxes with five digit push button combinations.

It's called training. Kids should be taught to not touch a gun and get
an adult to take care of it.

> That's what I love about kooks, they're so easy to make fun of because

There was nothing in writing, but I certainly wouldn't say that it's all hearsay. The whole issue was dealt with in court in court, and it -wasn't- just her husband who said that she felt that way. For anyone who's interested, here's a link to the judge's order.

http://abstractappeal.com/schiavo/trialctorder02-00.pdf

Personally, I think everyone in this thread ought to read this. It's got some important information in it.

Interesting, Mike. But just like to point out that Chelmsford is not on the coast - must be 30 miles away. What's more it's 30 miles or so from the North Sea coast, not the Atlantic coast.

Chelmsford became the home of the Marconi company (later GEC-Marconi) at the Writtle Road site.

It works just fine with the PCR-100, I use it daily !!!! :) You might also look at Talk PCR although development has stopped on it. Also if you are interested in listening to Trunk Radio, you can try Trunk PCR.

You can find it here:

http://members.cox.net/fiftyone.50/TrunkPcr.shtml

You might also find this link useful:

http://www.qsy.to/pcr/

Hope it helps :)

Hi,

When I was younger, I'm 31 now, I used to listen to shortwave, the station I probably remember the most if the Voice Of America. A weblink last night renewed my interest in shortwave, and I now plan to buy a radio and get back into the hobby. The show that rekindled my interest was a religious programme which I found extremely entertaining, Brother Stair was the shows host and apparently his show has been a firm fixture on shortwave for years. I found his rantings a great form of escape :)

Anyway, was wondering if anyone could give me advice on

a) radios to buy
b) good websites

or simply anything that would be handy for a newcomer. Have read the FAQ

Trev in Ireland

JD,
.
Her "Questionable Accident" had the Police initially
looking at the Husband as the possible Criminal 'cause'
of the Injuries to the Wife.
.
If as reported HE has a long term common-law wife and
a couple of children.
.
Then... Why Not ? Do the Right Thing and Let the Parents
take responsibility for their Daughter.
.
It seems like the Husband is afraid to let his Wife be
Revived; because She just may 'implicated' Him as
"The Cause of Her Accident.
.
i do not trust this guy's motives ~ RHF
.
.

He's after *money* but he's also, even more so, interested in *covering
his crimes* !

He *abandoned* Terri when he started screwing around with some whore!

He SHOULD HAVE lost ALL right to have anything at all to do with Terri's
care when he started "making babies" with another woman.

I'd say 1 kHz would be pushing it, at least I cannot estimate any better
than 1/5 of the finest dial markings, which would work out to 2 kHz
here. Anyway, I can only agree that it's an excellent homebrew job. This
BIG tuning knob sure is nice. What's the audio like?

Hello, Trev... you asked about:

> a) radios to buy
> b) good websites

I can recommend several good radios in a number of price ranges, so let's narrow that factor down a bit. How much do you have to spend for a radio? What's the *most* you want to pay for a radio? There are lots of decent radios out there for not a lot of money; of course, you'll get more if you can pay more, but more costly radios might not be what's best for you if you're hoping to avoid a steep learning curve, or dislike dealing with complex operating procedures.

Do you mainly want to listen to programs delivered by strong stations, or do you hope to flush out weak signals from small, seldom-heard stations? Knowing that will also help me to recommend appropriate radios for you.

As far as websites go, try these for starters:

http://www.primetimeshortwave.com/ - schedules by time, frequency, country

http://www.radiointel.com/ - all sorts of good radio info such as reviews, news, other links, tips, gear, etc.

http://ac6v.com/swl.htm - massive site that contains tons of relevant links to just about everything you would want or need to know about shortwave

So enjoy, and welcome back to the hobby!

Jackie

Well, if depends on how much you want to spend. I will give you some radios,
you research them.

New Icom R-75 $525
Kenwood R-5000 used only $390-$500
Drake R8 approx $400-$550 used only
JRC NRD-525 $400-$550 used only
Yaesu FRG-7 $200-$350 used

These prices are all subject to the condition of the radio. Now, if you want
to go cheap to see if you want to invest more money or get more involved, go
with a good portable.

I recommend the Degen 1103 for $65 shipped off Ebay. It's a good little SW
radio that does SSB too.

Or, get a brand new Sony 7600GR for like $130 at Amazon. I see prices change
like $5 here or there so check other sites.

Here is more or less a beginners SW site to see what's on. Now, some of the staions are I.D.ed wrong on this site I can attest to that, but it's a great start. Just type in the frequency you have on your radio and it tells you what's on.
http://shortwave.hfradio.org/

Or, you can click on the choice of "What's on now in English" to get a choice of the more well known stations on at your time of choosing.

There are more accurate lists like the EiBi schedules. Just do a search for it.

Well good luck. Wait, you're Irish, you have already have that. OK then, I hope your stations come in clear :)

Lucky

One of my nightly routines is to tune in WABC AM 770 @0300Z to listen to http://www.johnbatchelorshow.com/ on my Boston Acoustics Recepter. http://www.bostonacoustics.com/hs_product.asp?ProductID=213 I hook-up a Terk Advantage loop http://www.terk.com/pdfs/Advantage.pdf directly to the Recepter to hear WABC. It is the best AM/FM clock radio on the market that is very sensitive on AM with excellent speaker audio. But, on those nights when fading becomes a problem the Recepter is turned off and the Terk loop is disconnected. I turn up the Sony 7600GR and inductively couple it to the Terk loop. With the 7600GR's Synch-Detector activated WABC is almost always completely readable.

BTW, all of the radios I gave you are good choices. You could choose any one and you'd be happy with it. But, here's a very good site that gives other users reviews and opinions on almost all the radios out there. Then, you can decide what's best suited for you.That should get you started on your way.

What accident, RHF? My understanding was that she had a heart attack, which deprived her brain of oxygen for a long time.

> .
> If as reported HE has a long term common-law wife and

If I imagine myself in the husband's shoes, I don't have a hard time understanding it. *Assuming* that she really *did* indicate that she wouldn't want to continue living in her current state, then he probably feels he owes it to her to let her die. And if I imagine myself in Terri's shoes, I'd feel that my family owed it to me, since I've made my wishes clear in a living will.

I also appreciate the feelings of her poor parents, though, who would probably never be willing to let her go, no matter what. Like I said before, there are plenty of reasons and plenty of tragedies to go around in this case.

If she's *revivable*, then all bets are off and we have a completely different case on our hands!

My understanding is that Terri Shiavo's cerebral cortex was destroyed as a result of oxygen deprivation following a heart attack. *If* this is true, then, sadly, it doesn't make sense to talk about reviving (i.e., restoring any cognitive function to) her. And the fact that Terri's condition has persisted for so long itself suggests that she

sustained a catastrophic injury of this kind.

Anyway, now that I'm thoroughly depressed, I'd better make some coffee....

Hi Stephan,
The audio P.A. is an LM380 with tone control. Audio, even at hi levels is
quite nice. The audio preamp and final are pretty flat to 10 KHz.
The matching speaker enclosure uses a 5" woofer/midrange rated from 60-
10KHz- huge magnet. All Electronics has these for $7 each.

You should worry about this Al, you lose a few more brain cells, and we will be trying to pull your plug!

Seriously, stop reading all the kook stuff and try to find out what's really happening. Stop letting your emotions run away out of control, and think about it rationally, for once..

I have had a living will for about 20 years, it's a simple thing to tell what you want done if you end up like Terri. Sadly, she didn't do it, but there were plenty of people who heard her say what she wanted and that's why the courts keep shooting down the parent's case.

I agree with honoring her wishes. I just can't believe how we let
ourselves
suffer. Why don't we inject people so they don't have too go through
hell.

Well, a lethal injection of something would constitute euthanasia,
which will get you prosecuted a la Jack Kevorkian.

If Terri is experiencing discomfort in this, it is of courser legal for
her doctors to give her medication to minimize that discomfort....and I
expect they're doing that.

Hello, Trev,

If you're mostly interested in program listening, that is, from the major broadcasters, a portable should be just fine for you. If you are interested in listening to more elusive things -- oddball DX, military and other utility comms, you may want something with somewhat more capability.

For reliable side-by-side comparisons of radios, I'd suggest getting a copy of Passport to World Band Radio, www.passband.com.

Ultimately, what you get is largely a function of how much money you are willing to spend.

One thing that you should be aware of is that fewer broadcasters are targeting the English-speaking world these days, because they feel that the U.S., for example, is far easier to reach through the internet and satellite radio. It is unfortunate because they are relying on a fragile, large infrastructure to work at all times, especially when worldwide news events are important.

That trend was probably best established by the BBC, when Mark Byford sniffed to Parliment that he wasn't interested in anyone hearing the BBC besides "the opinion formers and decision makers."

Welcome, and don't let the trolls and idiots get to you -- this group collects them!

It's Camslant Chesapeake communicating with Rescue 1712.

I was initially able to copy Rescue 1712, but am no longer able to.

Camslant Chesapeake indicated that they were also communicating on 5696 khz.

Unless my reception of Rescue 1712 improves, I'm not sure how much more I'll be able to tell you.

> Her "Questionable Accident" had the Police initially
> looking at the Husband as the possible Criminal 'cause'
> of the Injuries to the Wife.

Not true. There was no questionable accident. The cause of her death has clearly been established in a court of law, and there was a malpractive judgement awarded based on those findings. The issue of of abuse did -not- come up during the trial, simply because it wasn't an issue. You can bet your ass that if there was even the remotest chance that her situation was caused by abuse rather than malpractice it would have come up. It didn't. The abuse thing appears to be nothing more than attempts to demonize the husband.

> If as reported HE has a long term common-law wife and
> a couple of children.

He does.

> Then... Why Not ? Do the Right Thing and Let the Parents
> take responsibility for their Daughter.

Because the way he sees it, his first wife is for all intents and purposes dead. Just because he's with another woman doesn't mean that he no longer loves Terry any more than it means that a remarried widower no longer holds any affection for his first wife. It's been established repeatedly that Terry wouldn't have wanted to "live" like this, and he feels obligated to honor her feelings. It's quit simple, really. Quit listening to nuts like Al. They're the ones making this stuff up. (Come on...the latest story is that when they went to remove the tube, she cried out "I want to live!" Someone here recently mentioned that they'd heard that on SW. I've seen it elsewhere as well.) Don't listen to Al, and certainly don't assume that I'm right. Try to go to primary sources for your info. As for doing the "right thing", her father said in court that he'd keep her alive even if it meant losing all of her limbs (a reference to her diabetes) and keeping her on a respirator. This, despite the fact that, as established by the courts, she wouldn't have wanted to be kept alive as she is...much less in a worse condition. (Look it up.) He's -doing- the right thing.

> It seems like the Husband is afraid to let his Wife be
> Revived; because She just may 'implicated' Him as
> "The Cause of Her Accident.

Again, it's already been established beyond any doubt. Furthermore, she -can't- be revived because the relevant part of her brain is -gone-. It no longer exists. It died during her heart attack, atrophied away and has been replaced by spinal fluid. No one's ever grown a new brain before, which is the miracle that people are praying for and want to keep her alive for. If she could be revived, this whole thing wouldn't be an issue. In fact, we'd have never heard about it.

Sonystyle.ca lists it for $329.99 Wow!

I can't see an authorized retailer selling it for much less. I doubt they would even knock the $30 of the price to make it even.

Sonystyle.com has it for $159.95

With the current exchange factored in plus Prov. and GST, the price should be around $225 CDN (not including massive Sony mark-up and S&H)

SOmeone was selling it, but I can't remember who. Go to the Radio Amateur's
of Canada website at http://www.rac.ca and look under the list of dealers,
specifically http://www.rac.ca/opsinfo/dealers.htm I'm sure when I checked
it was Durham Radio, Com-West or Radioworld. It was just under $300.
I've never dealt with any of the companies, just know that one of them
did list the receiver.

The following represents my views. It may or may not represent those of other people.

Mark Schiavo: what's the hurry in killing your wife Terri?

And please don't feed us the "She didn't want to live like this," baloney. For one, I seriously doubt that she ever said that to you or to anybody else. You never brought that up in the first seven-plus years after she collapsed. Why not? If that was her wish, you should have had the figurative plug pulled back in 1990 when it happened. Certainly no later than 1992. Why did it take you seven years to remember that?

I'll tell you why. Because she never said it, Mark. It's your cop out. You couldn't take it anymore. You couldn't handle the stress of the situation any longer. So you decided to get rid of the inconvenience. You claim to love her. You have a weird way of showing it---starving her literally to death. And I understand that there's another woman in your life. Terri's being alive isn't convenient for that situation, is it? Better off killing the old girl off and getting it out of the way, right?

But it wasn't that simple, was it? Many others were opposed to it, most notably her parents. So why didn't you turn Terri's custody over to them and be done with it? Then you could do as you please with the other woman. Would your conscience bother you then?

Let's assume that you're doing this because you simply can't stand to see her in this state anymore and that there isn't any ulterior motive involved with the other woman (or women). Don't you understand that there are still people who love your wife and want to see her continue to live? Why can't you turn her over to them? They'd take care of her. Assign guardianship to them.

Instead, you've gotten stubborn about it. You're bound and determined to have her killed off----and make no bones about it, that's exactly what you're doing. This isn't a case of a person who has no brain wave activity, who will die within seconds or minutes of a heart-lung machine being disconnected, and who won't even know that it happened because his/her brain is already dead. We're talking about a person whose body is still functioning with the aid of feeding. True, she has to be cared for, but so do millions of other people. Many elderly people are that way. Most infants are that way. Should we kill all of them, too?

Please don't feed me the "She's in a persistent vegetative state." If that doesn't matter to her parents, and if the state and/or private sectors are willing to take care of her and relieve you of all responsibility, why would it matter to you?

I see that some experts think that she might be in a minimally conscious state. Shouldn't that be looked into? Why are you so insistent about killing Terri off? You've waited fifteen years. Why would another few months matter?

I understand the the courts have ruled that you're her guardian and can decide matters such as removing her feeding tube. But just who appointed you God here to decide whether she lives or dies? What's she guilty of? Not being able to function normally on her own account? If so, how about killing off all the learning-challenged people? How about killing off all the elderly who need care? Why not end the lives of all infants under the age of two? Most of those can't care for themselves, either.

What's the hurry, Mark?

I've read that you haven't left her bedside since the feeding tube was removed. Is that supposed to be a final gesture of love? Or are you staying nearby to make sure nobody sneaks her food or water until she dies of a lack of both?

Whether you realize it or not, her death won't bring you peace. Far from it. It will make things worse. You won't understand that until after she's gone though. But trust me on this, Mark: I've been through your situation twice with loved ones who were (in each case) in supposedly irreversible states. I wanted to take the easy out like you're doing. But I stuck it out both times. Once it worked out well and the person came back to us and lived a reasonable life for a few more years. The other time it didn't and the person passed on. It's tough, but in retrospect, I realize that I made the right decision both times. You haven't----yet. You seem so obsesed with ending this that you won't listen to anybody who has an opposing view. You won't just turn your wife over to your parents and be done with it. They'll love her. They'll care for her. If they pass on while Terri's still alive, others will gladly continue her care.

In other words, Mark, you're not going to be out anything or inconvenienced in any way by turning Terri over to your parents. By not doing so and forcing her death, you're alienating not only Mr. and Mrs. Schindler, but literally millions of others. I doubt anybody would be majorly angry at you if you let Terri's feeding tube be reconnected. But I shudder to think of all the people who will be very unhappy with you if she dies from your imposed starvation. Or what those people might do.

If none of the above makes any sense to you, remember your marriage vows that stated:

"....to have and to hold from this day forward, for better, for worse, for richer, for poorer, in sickness and in health, to love and to cherish, till death do us part"

"Better or worse", Mark. Not just "better". "Sickness and health". Not just good health. In other words, you were supposed to stick it out, even though times are bad. Not get rid of what you probably perceive to be a problem and/or inconvenience because things aren't all that rosy.

Oh, and "till death do us part," doesn't mean that you're supposed to hasten her death. Because you're essentially her executioner here. And it just doesn't make sense to me no matter how its sugar coated----it's still murder.

Tom

Hello friends
Heard about PFC's years ago. made some up on my computer ..not fancy
but neater than hand written ones. I now send these to AM BCB stations
I send reports to and my response rate is now much better. Many times
when the person at the station sees the PFC they sing and return it and
send a "station designed" QSL as well. I'm told most AM stations are
short handed..so maybe the PFC's do make a difference. 73 Greg

All this talk of China and North Korea collapse is becoming crap.

5 years ago, i might have believed it (i even took a brief look at the book by some Gordon... talking about China's impending collapse), but looking at the way progress is going on in both North Korea and China, it will be irrational to believe in a collapse.

Economic reforms will always satisfy a greater proportion of the population than political reforms. Just look at the case of Singapore, where there is less political freedom than even China, where people can't join another political party without destroying their lives and career, where the country is ruled by one family, but 50,000 Americans live happily as expatriates in the country, and hundreds of American companies, like HP and Exxon have billion dollar factories in the country.

If anyone wants to champion freedom, first talk about Singapore and its American allies. Virtually no one in Singapore, local (myself included) or foriegner is interested in political freedom at the expense of money and livelihood. This is a fact of life.

Purchased new directly from Radio Labs with all their mods installed.
mint condition, with box, manuals, AC adapter, wind-up antenna,
leatherette case etc. Asking $195, including shipping (insured) by
priority mail! Payment by paypal, Money order or check. Check must
clear prior to shipping.

Reason for sale is that I have a new desktop radio and no longer use
the 909.

my e-bay name is neilbell and I have 100% positive feedback. If
interested contact me before I put it up on e-bay early in April.

Note the e-mail address instructions

Landover Baptist Book of Rules and Regulations | Chapter 83 | Holidays | Section 4: April | Subsection R - Easter | Page 723-724 | Paragraphs 4 and 5:

The Easter Bunny: Banned Easter Symbol
From the Year of Our Lord 1923 - (Until Jesus Tells Us Different)

Paragraph 4 -

Of all the Pagan symbols created by Satan to steal the True Christian History of religious holidays, none, save Santa Claus is more dangerous than the Easter Bunny. Painted pagan eggs, Easter baskets, and yellow marshmallow chickens don't hold a candle to this furry four legged demonic spawn, forged in the fires of Hell by Lucifer himself, for the sole purpose of distracting innocent little snow white children from the true meaning behind Easter Sunday. As the former angel of light, the Devil is an expert in trickery! This has been evident from 1923 to present time in modern churches where so-called "Christians" display the Easter bunny or pictures of bunnies in their Easter Sunday service programs. Sadly, many pastors have been seduced by the Devil's seemingly innocent long eared, hopping hellion. But do not be mistaken! Underneath that silky soft white coat of hair lay the tight red skin and pulsing veins of a miniature demon. And there are millions of them! Have you ever heard the term, "they breed like rabbits?" Well, the Devil is laughing right at YOU! If you don't understand that Satan's job is breeding minions and the bunny rabbit is the ultimate symbol of minion breeding, then please close this book now and find another place of worship, for you are not welcome here.

Paragraph 5 -

Since 1923, Church authorities have not permitted the presence of rabbits on the Landover Baptist Church campus. Any family found possessing or breeding rabbits will have the rabbits terminated and suffer public humiliation. In addition, they will receive immediate counseling from a Deacon or Pastor (fine accrual not to exceed $2,800). [AMENDMENT - 1957 - Church members found to be watching television programs where rabbits are depicted, including the popular pornographic cartoon, Bugs Bunny, where the rabbit is made to appear human in nature (i.e.: walking on two hind legs) and unclothed are subject to severe discipline at the Pastor's whim, and fines not to exceed $4,300]. [AMENDMENT: 1962 - Pastor has reviewed the popular film, Harvey, starring Christian actor, James Stewart, and deemed the material inappropriate for Landover Baptist Church members (as are any picture house films). See Chapter 42 | Motion Pictures | Section 43 | Pages 305-450 for extensive details on discipline and monetary fines]. [AMENDMENT: 1974 - No church member is permitted to consume or digest the product, "Trix." With the slogan, "Silly Rabbit, Trix are for kids! Satan

has revealed himself to the blind world of unsaved morons, but still they refuse to believe! (See Chapter 42 | Motion Pictures | Section 43 | Pages 305-450 for extensive details on discipline and monetary fines)].
[AMENDMENT - 1984 - Pastor has viewed the film, Roger Rabbit and has instructed that no further edicts be made to this section - any and all forms of rabbits in any form of media or reality are unacceptable until Armageddon (See Chapter 42 | Motion Pictures | Section 43 | Pages 305-450 for extensive details on discipline and monetary fines)].

---- end ----

more....

below.....

keep pushing Page Down..... :)

--> ps: If you ain't figured it out by now, 'Landover Baptist Church' is a parody
of Fred Phelp's infamous Westover Baptist Church. Do a Google on these and
you'll find them. Great holiday reading! Of course you can be sure that
Elizabeth Border, Jakie Patru and their paranoid ilk will likely take all the preceeding
rantings to be truth and eat up the same like flies to a freshly laid cow-flop. Pathetic eh?

I have a Sangean ATS909. It is an excellent radio but it has a problem. The LCD display has "sprung a leak". The bottom right hand corner of the display is blacked out, and looks like a mini oil slick. It covers perhaps 1/5 of the display. I took it to Radio World in Toronto and they didn't seem to interested in trying to fix anything unless I was purchasing a $1000 receiver right afterward.

The 909 is a few years old now, and I am looking for something a bit better, and am looking at the Sat 800. Is it worth trying to fix the 909 display for what the radio is worth?

The Sat 800 sure looks good (BIG, but good) but the impending release of the Eton E1 is making me question the 800. I'm certain the E1 will be much more expensive, but is it any better?

Hi

I was busy co-chairing a fundraising dinner for one of the organizations I volunteer for, and then I went to Naples for some much needed R&R.

My ISP down there doesn't do newsgroups, and I'm not fond of the Google interface.

I thought of you a week or two back when someone listed a 550 on ebay, but the guy pulled the auction before I got around to posting a heads up. Of course that might have brought other bidders in too.

Regards,

Mark

I worked for the local school system a year ago and I was amazed at how easily people could walk into and out of our local buildings through a variety of doors and open windows. Pre-Columbine schools weren't designed with security as the primary factor. So it all comes down to the desire of the potential shooter. If they truly feel no remorse about taking the life of another human being, and they don't fear their own deaths, then there's really nothing to stop this horrible tragedy from happening again and again. God help us all.

In World War Two,the Dutch govt was experimenting with a "self fireing" gun.It was designed to be dropped from the air via Aircraft and it was suppose to stick straight up in the ground via a spike that was attatched to the bottom of the gun and that was suppose to automatically start the gun revolving around and around horizontaly and be shooting at the enemy.But they figured it might wind up killing more Dutchies than the enemy,so they abandoned that bright idea.

"FireStarter5" <5retratserif@liamtoh.com> wrote in
news:4244440c$0$30513$2c56edd9@news.cablerocket.com:

Consider contacting Radio Labs. They can do a series of modifications to
the ATS-909 that enhance its operation and changes the display appearance
a little bit (illumination). The cost is $109.

http://www.radiolabs.com/products/receivers/super909.php

Since you also need the display repaired, write to them and ask how much
more will it be for this repair. (If you opt for the MODs, they will
already be in the radio, and the repair may be simple, make sure to
emphasize this point concerning the combination repair/MODs if you elect
for this, and not simply add the quoted repair cost to the MOD cost).
After all, if you are lucky, the cost of the display may be the only
difference in the price.

When you get the radio back, you will have new functions and a slight
change in appearance, giving you the impression that you indeed have a
new radio.

The DX-398 and ATS-909 radios are great. If you are accustomed to its
use, you may miss the additional features if you go to another model.

No one will collapse, because America needs free trade and to enforce IP rights more than ideology. The massive Chinese market for American exports is more important than any ideology. Money wins at the end of the day.

I visited China first in 1990 when economic reforms just started, and everywhere was drab. The next time i returned was 13 years later, and it has become a different country.

You can view the development in smaller Chinese cities - a proud chinese put up city photos of some 200 Chinese cities - http://www.skyscrapercity.com/showthread.php?t=175183 (Take note of traffic as well). Assuming that each city has a population of 2 million, that covers 400 million people.

World media (especially American media such as CNN) do not show the reality of what is happening in China...It's time for education.

That's all just as questionable as what her "true wishes" are. I don't really consider those suspicions. I only know that as long as the option
remains for an innocent, I would choose life.

-=jd=-

I would too, *so long as* life looks to be the best of the two alternatives. I think that which is preferable in Terri's case can only be discovered by (1) medical science and (2) the best account we can find of what her wishes were.

Okay, I've gotcha. You make a straw-man, moving-target issue of
"credibility,"
so you get to dodge any idea of proof, believability, and reason.

I understand now, and you've made it clear you won't be persuaded. Fair
'nuff.

73,

Steve

It's already been proved, as no one has come up with a "living will" or
any other document signed by Terri Schiavo that expresses her wishes for
such a situation. It isn't our fault you are so stupid.

They made ten. A critical part - chip? - was discontinued before production could begin which necessitated a re-design. The German Grundig company, already in some financial difficulty, could not or would not follow through on this.

I believe all ten are still owned by the company that purchased Grundig but, of course, I could be wrong.

I do not know where the radio prototypes are stored.

Best,

Joe

> The Easter Bunny: Banned Easter Symbol
> From the Year of Our Lord 1923 - (Until Jesus Tells Us Different)

What is the source for the article that you posted?

Though it is fashionable to disparage Christian oddities, research
Judaism and it's beliefs. The following are just a very small selection
of items easily found by doing searches on Google, and are not meant
disparagingly. Every religion has peculiar rites, or rites that non-
Believers may find peculiar.

Fear of the Easter Bunny and of Christmas Trees distance me as well from
these forms of Christianity. Yet concerns about "Harry Potter" are not as
offensive to me, though we own the movie series. Being Catholic and
viewing online movie reviews from the Catholic perspective, they too
mentioned that they can see that the Harry Potter series may be an issue
for some, but the Catholic Reviews went on to extol the virtues of the
Harry Potter movies, seeing the loyalties among friends, the morality in
terms of the adults at least trying to do what is right and more.

Christians are Christian's own worst enemies. They sometimes remind me of
Guliver's Travels, where one group of islanders hates the other, since
one side opens their hard boiled egg on the small end, the other group,
the large end.

So comes the fear of Easter Bunny.

Dr. Artaud

"http://judaism.about.com/od/sexinjudaism/a/familypuritylaw.htm
Niddah refers to a woman who is ritually impure. She is considered
ritually impure while she is menstruating and for seven post-menstrual
days. According to the Family Purity Laws, as soon as possible after
nightfall of the seventh post-menstrual "clean" day, the woman must
immerse herself in a mikvah. After she has purified herself in the
mikvah, then she can resume sexual relations with her husband."

"A mikvah (also pronounced mikveh) is a ritual bath. The purpose of the
mikvah is solely ritual purification, not physical cleanliness. One must
thoroughly bathe before entering into and being purified by a mikvah.

This body of water must contain at least 480 liters of water that has not been drawn or stored in a vessel (Lev: 11:36). Oceans, lakes, rivers, ponds and springs are all natural catch basins of rainwater, and thus can be used as mikvaot (plural for mikvah). Most mikvaot today, which exist in cities, use 480 liters of undrawn water (channeled rainwater or melted snow), and then add water pumped from a faucet to reach a depth comfortable for immersion."

http://www.jewfaq.org/kashrut.htm
"Although the details of kashrut are extensive, the laws all derive from a few fairly simple, straightforward rules:

Meat (the flesh of birds and mammals) cannot be eaten with dairy. Fish, eggs, fruits, vegetables and grains can be eaten with either meat or dairy. (According to some views, fish may not be eaten with meat).

Utensils that have come into contact with meat may not be used with dairy, and vice versa. Utensils that have come into contact with non-kosher food may not be used with kosher food. This applies only where the contact occurred while the food was hot.

Grape products made by non-Jews may not be eaten."

I stuck up a wire about 30 feet long. It works okay. My next
innovation will be a good ground and coax from the radio to the
antenna/ground which will hopefully get some of the computer noise
out.

Has the radio been dropped or knocked around? Your LCD is cracked and starting to leak. Sooner or later the leak is going to expand through the entire display. To replace the LCD would probably cost more than buying another radio and I'd stay away from the Satellit 800. I have one and never have been impressed with it for the money. Buy another DX-398 or ATS-909. You can find them for around $100 on Ebay now and then or some Radio Shacks may still have new old stock DX-398 on their shelves at the $100 final closeout price.

4342. Canada Criticized for Silence on China Human Rights Abuses

Newsgroup: rec.radio.shortwave

Pettigrew Criticized for Silence on China at UN

TORONTO—The Chinese language Voice of America reported this week that a number of Canadian NGO's were disgruntled by Foreign Minister Pierre Pettigrew's silence on China in his opening address Monday to the United Nations Commission on Human Rights.
The VOA report cited reactions from Canadian Tibetan and Uighur communities who felt Pettigrew had neglected the severity of the ongoing human rights abuses against broad sections of the Chinese society.

Pettigrew, who was invited to join several other Foreign Ministers in the high-level portion of the UN's annual human rights meeting, acknowledged the commission's politicization in recent years that many say has damaged its credibility. He called for improvements in both the UNCHR and the Conference on Disarmament.

However, in failing to mention China in his address, Pettigrew drew criticism for contributing to one of the commission's continuing failures—holding China accountable on human rights.

"The ongoing failure of the Commission on Human Rights to tackle the serious human rights violations in China is shameful," Amnesty International Canada's Secretary General, Alex Neve, told The Epoch Times Wednesday.

"Canada's unwillingness to support, let alone spearhead an attempt to bring a resolution before the Commission is a disappointment, which is compounded by the absence of any reference to China's dismal human rights record in Minister Pettigrew's speech to the Commission on its opening day."

The VOA report quoted opposition MP Jason Kenney as saying that the government has been swayed by trade interests to keep quiet about China's human rights.

"Canada should facilitate its trade with China and, at the same time, help China to improve its human rights situation. Only doing both of them simultaneously will it be consistent with the interests of Canada in the long-run," the report quoted Kenney.

VOA is an American government-run radio station who's Chinese and English broadcasts are popular in China, where local media are under the control of the governing Communist Party.

Annual reports by the UN's Special Rapporteurs have regularly documented serious violations of human rights in China against Tibetans, religious groups, as well as widespread severe persecution of the Falun Gong meditation group.

However, intense lobbying by China has kept the commission from criticizing its human rights record.

4343. More Chinese Residents Buy Shortwave Radios

Newsgroup: rec.radio.shortwave

Nine Commentaries Quietly Spread in Beijing

Since The Epoch Times published its editorial series "Nine Commentaries on the Communist Party" in November, Chinese officials have tried to ban their dissemination. But the publication continues to spread quietly. Learning that Sound of Hope International Radio Station broadcasts these commentaries to Mainland China using shortwave signals, more and more Beijing residents are purchasing shortwave radios, reports indicate.

According to one Beijing informant, high-quality shortwave radios are particularly easy to sell. "Yesterday, an acquaintance told me how remarkable the sale is that he couldn't believe it. These radios are expensive; US$19.24 is a lot of money. But so many people buy them- they want to hear outside voices."

As the "Nine Commentaries" has spread rapidly, more than 20,000 people are withdrawing from the CCP every day, as an Internet withdrawal site has been promoted alongside the commentaries.

The CCP has sent special "maintaining advancement" teams to different areas trying to invigorate the party. The Beijing informant said: "After training, these teams are sent to different places for three months. They are sent to the countryside, towns and counties to carry out the 'Maintaining Advancement' campaign." When asked about the campaign, the informant said: "How can you bring freshness back to things already rotten? The answer is obvious."

According to other sources, many CCP followers have begun to consider their future options.

http://english.epochtimes.com/news/5-3-24/27303.html

Chinese Communist Party Resignations Will Soon Top One Million

Dr. Pang Yubin, a representative of the "Withdraw from the CCP" website, said the CCP is its own worst enemy. The CCP's crisis is caused by its nature, its own corruption and degeneration. Dr. Pang also pointed out that the tide of withdrawal from the Chinese Communist Party is a very influential event. In the near future, more and more people will realize this event is changing China's current situation, is rearranging the layout of the world, and is guiding the future of mankind.

Mr. Huang Zuwei, the general manager at The Epoch Times' Washington D.C. office, said, "Right now, every five seconds, one person withdraws from the CCP and its affiliated organizations, and the speed is accelerating. The

Where can I find the newspaper?

Do you have pictures like that of the tens of thousands of innocent
babies and children we have blown apart in Iraq?

Thanks.

That's just it. I bought the 909 quite a few years back and never dropped it or anything. It just happened that one morning I got up and there was this little black blob taking over the bottom right side of the LCD display. By then the warranty was long gone, but I took it back to the store, and they basically didn't want anything to do with it. The 909 still works fine but the "blob" takes out a portion of the screen.

Unfortunately I avoid Ebay like the black plague, and the best Radio Shack by me either sells the YB400, the Sat 800 or the wind up FR200's, plus the Eton line (but not the E1...yet). The YB is nice but even smaller than the 909 and I'd like to move up in size rather than down. The Sat 800 is huge and comes with two opinions from people, they either love it or it didn't meet their expectations.

I'm not looking for Drake performance. The 909 is good, but I imagine the 800 is a bit better overall for pulling in stations.

4347. For Those Who Recommend/Sell/Buy CCP Degan/Kaito Radios

Ms. Zhang Witnessed the PLA Killing People with Explosive Bullets on June 4th [in 1989, Tiananmen Square, Beijing]

Ms. Zhang was a former medical staff member in a hospital in Beijing. Here is her speech:

"On June 4, 1989, when the People's Liberation Army (PLA) massacred the students on Tiananmen Square, I was working in a hospital in Beijing. I saw dead bodies dragged into the hospital and many heavily injured students. They [the PLA] shot at people with explosive bullets – the kind of bullets that would blow up upon impact. The radio however broadcasted that no one was killed. I learned from all this that the news reports from the Chinese Communist Part (CCP) are all false."
...
"In the past I still had hope for the CCP. After reading the "Nine Commentaries on the CCP, I realized what the CCP is all about. It is inhumane and has conducted crimes to the greatest extent. Since the establishment of its regime, it has killed more people than during times of war."

"During the CCP's 50-year regime, it has killed tens of millions of people. This fact has also been admitted by the CCP. The 10-year Cultural Revolution is referred to as 'The 10-year catastrophe,' during which many people died due to injustice, and many families were left broken.

"Has it improved at present? During the People's Congress, there were many people who went to appeal but they were treated violently by the Public Security. There are reports and pictures about these incidents. All are our Chinese compatriots. A government treats its people with such violence.

"The Chinese government suppresses people. At present, China is the most corrupt place in the world. A small number of the population, the officials, exploit the people and live in great wealth. Most of the people live a very difficult life.
...
"Human beings should have a conscience. Others who live overseas enjoy just laws and freedom. We have to help the Chinese people who are suffering in mainland China."

In respect to those who were threatened for publicly criticizing the CCP's persecution toward the Chinese people, Mr. Guan said, "It is dangerous to put out a fire, but you have to help when your neighbor's house is on fire. If you do not help, it would also harm you sooner or later. Actually, to save others is to save oneself."

Two Factory Workers in China Buried Alive by Communist Cadres

In order to cover up the role of a factory in poisoning five female workers, three of whom were "under 16, the legal age for factory work" (Washington Post), cadres in Xixuying, a town 200 miles southwest of Beijing, buried alive two of the five girls. The parents won a visit from "a team from the Public Security Ministry to exhume the bodies and conduct tests to confirm the cause of death." However, the Beijing "team" left several questions unanswered, and the locals of Beixinzhuang, the home village of the deceased are not happy. The factory also best symbolizes the farcical nature of "private" ownership - its "owner" is Xixuying's Deputy Mayor.

In China, Deaths and Questions
Families of Peasant Girls Who Perished at Factory Say Signs of Struggle Evident

BEIXINZHUANG, China -- A nightmare has descended on this poor farming village, filling its muddy lanes and brick homes with dread. Despite official denials, the peasants here have concluded that two teenage girls who ventured to the big city to earn some money were sealed alive in their coffins and left to die unspeakable deaths.

Somewhat surprisingly, they don't bring rose-colored glasses to the subject. One banker, despite doing well, has deep, well-founded suspicions about Communist China, in part due to his suffering during the Cultural Revolution. Jim Huang, who has also succeeded, had this to say to Hannah Beech: "there are con artists everywhere. They will cook their books. They will lie during presentations."

Scroll Down: http://china-e-lobby.blogspot.com/

Taiwanese businessman talks about dangers of investing in Communist China:

80 percent of the Taiwan business invested in China will eventually fail.

Xue Yuhuang, a Taiwanese businessman, talked to the Liberty Times about his harrowing experiences as an "investor" in Communist China. He fought and lost, against local corruption, and while he "was able to recover 90 percent of the original investment and able to withdraw successfully, but his brother-in-law, who had invested $70 million in Taiwan currency, lost every penny"

I went to the Goodwill thrift store this afternoon (it's only seven tenths of a mile South of my doggys couch,I just can't seem to stay from that place) and for $2.00 I bought an AR-147 + Transceiver (it says on the box,Transceiver) and it says 60 Watts Out! on High Power.The Adi hand held remote control/microphone has some buttons on it such as CALL,VFO,MR,MHz and buttons from 1 through 9 and of course the 0 button and four buttons,A B C D and * and # buttons.On the front of the device it has buttons VFO and MR and MHz.Under the VFO button it says M> V and under the MR button it says M and under the MHz button it says Lock.Under the diaplay screen it has buttons F and CALL and SHFT and TONE and DTMF.On the right hand side of the display screen are two little knobs,VOL and SQ and to the right of those knobs are two buttons,LOW and PWR and the cord of the microphone connects to the front of the device/transceiver.It all looks fairly new looking to me.On the back of the device is a cord for an antenna connection and of course the hot wire and the ground wire.Also,on the back of the device is jack for an extenal speaker.I do have some CB radio antennas here.I haven't gotten around yet to hooking it up and seeing if it works.There is spare fuse and if the device won't light up,I will see about changing the fuse.I wonder if y'all might have some information about the device.I think it's a CB radio because I own some old CB radios and a couple of them look similar to this one.I also bought a PC Warehouse System 486 desktop computer for $25.00 dollars at the Goodwill thriftstore this afternoon too.As if I need another damn computer anyway.I already own about 16 computers.

And many of those shortwave radios are made by the Communist Party,
intended for picking up CNR broadcasts. But it would be easy to put
together the anti-jamming antenna on the RFA website and plug it into
the external jack on a Degen 1102 (for example). Hell, one could even
attach it onto the whip, although one might have overloading problems.
Americans who have bought Degen 1103's meant for Mainland China have
reported that the radio comes with a little sticker with a radio tower
and the letters "CNR" on it. Despite this unsubtle attempt at
persuasion, people are listening to "forbidden" signals, and all you
have to do to clear the frequency readout is take out the batteries.
Unlike earlier times when you had to carefully adjust the pointer to
make sure that a secret policeman didn't discover that you'd been
listening to forbidden signals. If the secret police discover a radio
with no batteries in it, they can't prove that you've been listening to
something you shouldn't.

I logged Sound of Hope (Passport says Voice of Hope) on 9965 khz at
around 1230 UTC on my last DX round. Oddly, I didn't hear a jammer.
According to Passport, the station broadcasts from Palau.

Thanks for posting that insight which more and more is exposing
matters in the country. I do a protest in my consumer buying
Why buy something made in a country that it totally opposed to
this country's way of living and government. Everytime I see
something in the store regardless of where. If made from places
made other than China I do purchase that item, instead.

Get in touch with www.ccrane.com and ask them for an estimate for repairing your radio.They do (or at least they used to) sell and service those radios,but since you say you bought it somewhere else,I don't know if ccrane will repair it not.It might be worth checking it out though.One of the reasons I do NOT! like those kinds of display screens! they fade out and go blank.

There are a lot of well performing, low priced shortwave radios out
there. The E1's only redeeming feature is that it gets satellite radio,
and it doesn't even do that very well. If you have the dough, get a Sony
7600. They're around $150. If you need something cheaper, you can buy a
Degen or Tecsun on Ebay (gasp! that word again) for $50 or so, but if
you ever admit to owning one on this group Li Whatshisface will scream
at you for "supporting Communist murderers" so be careful. If you
ABSOLUTELY cannot stand ebay, Degen sells radios in the US under the
Kaito name, but you will pay about $100. Tecsun sells in the US as
Grundig/Eton. Portables like the 909 generally aren't worth repairing;
if something happens like the display cracking (the "liquid crystal" in
LCD is what makes the little oil slick looking blob) the only thing you
can really do is throw it away.

If you leave those kinds of radios out in the sunshine,especially with the sun shineing on the display screen,or out in hot weather too long,they will fade out like that too.I am not an expert on that stuff,but I have seen other devices that have those kinds of display screens do that before.

I wish they had cool shit like that at the Goodwill stores or any of the other thrift stores around here, all they have around here is shitty old 1980s clock radios. I suspect that the employees scoop up the good stuff before the customers ever see it and scalp it out the back door. Every so often you'll find something quirky that the Mexicans missed, I've found two old style (pre 1963, with the CD marks) transistor radios, and I found a transistor radio (with original AC adaptor) that was made exclusively for picking up the aero band, but stuff like that is rare.

SOmeone's not going to give one of those to the Salvation Army if they know what it is. So someone gave away their husband's radio, before or after he died, or someone found it in an attic after moving in (not likely) or it was stolen and found to not work.

Chances are good that if it was working, it's not now. I suspect someone did think it was a CB set, and likely mangled it in trying to get it to work.

****
I think you got burned on the computer. I bought a Pentium at a thrift type store and it came with a Canon ink jet printer. I paid $50 but that was about three years ago. (They all work great.) I had some other computer gear that I wanted to get rid of and found that the nearby prison takes it for free. (Some places you have to pay to get rid of a monitor.) I left it there and noticed there were about five computers that were better than my Pentium that were thrown out. I think if you were to put an ad in the local grocery store bulletin board that you wanted old computers to fix up, you will have them by the truck load.

**... some Radio Shacks
may still have new old stock DX-398 on their shelves at the $100 final
closeout price. ....**

He's have to be extremely lucky to find one. I'm not saying it's
impossible, but.... Interestingly, the price may be well below $100 by
now, if he can find. RS's policy is to drop the price month by month,
or at least a few times per years. I bought mine in late 2002. I might
as well quote myself on the subject again:

These are the prices off the RS Computer as of 2 p.m. Central Time,
Oct. 29, 2002:

DX-396 is at $29.97 20-226 equivalent to Sangean, model unknown
DX-397 is at $19.97 20-227 " Sangean SG-622
DX-398 is at $99.97 20-228 " Sangean ATS-909
DX-399 is at $39.97 20-229 " Sangean ATS-606 or Siemens RK-759
DX-402 is at $69.97* 20-230 " Sangean ATS-505

* As of late November [2002], the DX-402 is $49.97.

And for those AM DXers out there, the word I have is that the AM loop
antenna (15-1853/1501853) is discontinued. It is no longer available
through the website, and can be found only in the stores until all
gone. Current price on this antenna is $19.99.

Best wishes finding one.

What are you babbling about? I've provided sources of info, and you've
provided nothing but empty claims. If you want to claim, as cuhulin seems to

feel, that sites like rense.com (where they claim the Twin Towers were brought down with explosives) are credible and deserve due consideration, feel free. In the meantime, I'll feel free to point out that you've been challenged to prove a statement that you made, or at the very least provide a modicum of support for it, and that you haven't been able to do so.

I've provided some support for -my- position, and even explained to you that I tried but failed to find support for yours. Quit whining, and take your turn. If you have some evidence, trot it out.

If you had any sense whatsoever, you'd stay away from sites like the ones you've been providing today. On top of that, have you been reading anything I've been posting? If there had been evidence of abuse like that at the time of her collapes, it most assuredly would have come up at the malpractice trial which in the end went in The Schiavo's favor. The only places where I've heard allegations of abuse have been at...well, places like those that you're providing links to. I'd like to see a primary source to support these allegations, and others that have been made. I'm sure sorry that requirement of mine pisses off so many people, but that's just the way it is. My contention is that the court based its findings on facts, not rumors circulating in fundamentalist blogs.

Why I'm telling -you- that is beyond me.

I have seen those X-Ray's of her before
> on the internet a few years ago,either at World Net Daily or somewhere
> else on the internet.Those kinds of things could not have happened to

I doubt your average meth addicted burglar is going to make off with a
ham rig if he can get his hands on a DVD player instead. And if a
burglar WAS dumb enough to take this over a DVD player, I doubt they
could get it to work.
>

Cuhulin indicates that it runs off a battery. If so, either somebody
gave it away who was too challenged by the lack of an AC plug to figure
it out, or somebody hooked it up in a way that fried it. If it DOES
work, I'd be pleasantly surprised. And no, Cuhulin, it is NOT a CB.

I don't agree. That's what we have courts for. I don't need to personally
worry about who's more believeable. I can trust an impartial judge to do his
job. For that matter, I can trust any number of impartial judges to do their
jobs. This case has been before how many jurists? Plenty...and they all
agree.

> I don't know who to believe. In

I don't think that's his issue, otherwise he'd have given her over to them.
This is about what she wanted. If she did indeed voice her opinion about
this to him and other people, it'd go a long ways towards explaining what

he's doing, don't you agree?

> With
> that option remaining, the choice made was to starve her to death. And the

It -would- be extremely messed-up, but I sure don't see anyone reveling in
this. It's a horrible situation, period, and that's the one thing that I see
universal agreement about.

I took a second look at the pic. If you hooked that thing up without a
proper antenna and/or dummy load, you'd fry it. That's probably what
happened, and now for $2 Cuhulin has somebody else's problem. Live and
learn. I once paid $40 at a thrift store for a VHS tape camcorder that
ate tapes, and was too old to fix. And $40 is a lot of money when you're
on disability. I never did that again.

I like my 7030+ but I'd have dumped it if I couldn't put in filters
better suited to my tastes. The stock ones are narrow enough to give
muddy sound or wide enough to let you hear hets from an adjacent channel.

Fortunately, it's easy to find and add filters, and if you choose ones
with steep skirts you can get beautiful audio without losing performance.

Also, the sync detector is included on all 7030's. Lucky was probably
confusing it with some Lowe receivers.

It's a 2 meter ham radio.

A CB antenna might give you OK reception, but I wouldn't suggest transmitting with it because the SWR will be horrible and it may fry the output.

Odds are you could sell it for a decent profit on ebay.

I don't know what's up, but you are -seriously- misquoting me! This is the
relevant passage:

RHF said:

> It seems like the Husband is afraid to let his Wife be
> Revived; because She just may 'implicated' Him as
> "The Cause of Her Accident.

And I replied:

Again, it's already been established beyond any doubt. Furthermore,
she -can't- be revived because the relevant part of her brain is -gone-.

What I said has nothing to do with her wishes. What's up?

> words, the judge found one side of the argument as more credible that the

> were raised in that proceeding have been joined by other conflicting
> accounts. However, to the husband's relief, the Judge has refused to hear
> anyone else's anecdotal account relating to her "wishes". It's all rather
> sad, actually.

That's untrue. The matter was addressed in court, and both sides had the
opportunity to present their sides. Furthermore, I wouldn't characterize
this as He said She said. It appears to me, and I could very easily be
mistaken, that it's a case of "She said" vs. "She never said anything about
it to me". (I haven't heard anyone claim that she ever stated she wanted be
be kept alive by heroic measures.) I think it's an important difference. As
for the "preponderance of evidence" the judge in his written order (which
was upheld on appeal) used the term "clear and convincing evidence". I'm no

lawyer, and perhaps there's no difference between the terms, legally. But it sure sounds like it to me. It's an interesting question; I wonder if they are two different standards?

> > Furthermore,

Unfortunately, people here got accustomed to paying outrageous prices in Canadian dollars back when the Canadian dollar was $0.60 US. Now that it's around $0.81 or so, they still pay those same outrageous prices. Slowly, internet and mail order eats into the local market, and eventually the prices come down.

Teaching comparative religion = okay in a class devoted to philosophical and religious issues. Also in history and social studies classes. Not okay to teach non-science in a science class. Evolution belongs in science class, religion does not.

Can't say I understand why you've introduced the term "liberal" here. Secularism is a general trend in western countries, including those who are socially and politically conservative and liberal.

You know that the Tecsun, Degen radios etc. that you like to deride are for the domestic Chinese market, primarily. If what you say is true, how much longer will they be allowed to make them?

I know it is difficult to find products these days that are NOT made in
China.
Most of these products are produced by contract for foreign companies
exclusively for export.

What I would avoid like the plague are products made exclusively by
and branded by Chinese companies. Degan/Kaito is just one example.
Wal-Mart is full of Chinese company branded & manufactured electronics.
These are the companies that are now trying to set off on their own in
the world marketplace after having scalped western company manufacturing
and marketing knowledge. These new Chinese branded companies are
almost ALL own by the Communist government and produce profits
exclusively for the Communist Party coffers.

Apparently Amazon will only ship books to Canada. This on top of Canada
turning back all Liypn's radio shipments in order to satisfy the greed
of Kaito Canada. It seems that the Canadian government is quite willing
to act to preserve massive profits being made off Canadians by foreign
(American and otherwise) companies. The American conservatives here
always laugh at Canada for being liberal, but when it comes to the
almighty dollar the Canadian government at least is just as conservative
as America. Plus the Canadian government probably gets massive tax
revenue off all imported goods sold in Canada, and they're loath to
disrupt the racket. My recommendation to Canucks: rent a post office box
in America and use that to get all your goodies at American prices.

I want to at least see if it works.But that won't be untill I have the proper antenna and whatever else I need to hook it up properly.There is at least one of two radio repair shops in the Jackson area that can repair my Transceiver properly if it needs repair or at least somebody around here knows something about that.And the third Thursday of each month (I think it is the third Thursday of each month) some ham radio operators have a meeting at the Red Cross building on Riverside Drive here in Jackson.I think I will start attending some of those meetings.Like I said before,my $2.00 Transcevier looks to me like it is in very good condition.I don't think it has ever been used before because it looks almost brand new to me.The mounting bracket for mounting it in a vehicle that came with it has never been used before either and the little screws (four little black screws and four larger chrome plated screws) are still in the little zip lock baggy.

Ahem. America is not the world, although many Americans think otherwise.
I agree that most Americans who own shortwave radios are likely tuning
in to kook broadcasts, mainly because they hear that their favorite kook
is on SW and/or that The Truth can be heard on SW, so they buy a cheap
portable and keep it tuned to WWCR. Al Patrick is a good example of a
gullible American SW listener who believes everything the kooks say.

For the record, I don't listen to kooks at all, they drive me crazy,
although occasionally they're good for a laugh.

Not only that, Tecsun/Grundig/Eton is WHOLLY owned by the Communist Party. China has a thriving domestic SW broadcast market, mainly because many parts of the country are not covered by MW/FM. The problem for the CCP is that the same radios which allow Chinese to listen to CNR also allow them to listen to RFA and Sound of Hope among others. The CCP seems to be clueless as to this fact. In fact, the latest offering from Tecsun, the PL-350, appears from the pics Liypn posted to have a TUNING KNOB in addition to the usual slewing buttons. "We don't want people listening to RFA, so let's make it easier for them to do so!" That's a real symptom of a government disconnected from its people as well as reality. Hopefully by the time the CCP wakes up to this fact, it will be too late. Let's also hope that the implosion of the CCP from terminal stupidity doesn't lead to riots at every Wal Mart in America.

What you have is an ADI Ham Radio Transciever for VHF communications.
Frequency
band is 144 to 148 mHz. Its worth a couple of bucks to a ham operator.

Source record: 13902

Dear "FireStarter5,"

I have not been impressed with any Sangean product regarding their longevity or construction quality. I have owned three Sangean radios including the '808A and the '606AP, both of which were made in TAIWAN (that was supposed to be better). The '808A gradually lost its performance (sensitivity) over three years; I just threw it out. The '606AP, which was my "travel" radio for a few years started to show some internal "computer" (memory) problems two years back and, though it still works, I have "retired" it. Spending a lot of money "fixing" those things is just not worth it, in my opinion. (I currently have a Sangean CCRadio, which is very disappointing. My wife uses it to hear TV sound when she's in the shower. It's good for that, but not much else.)

If you want another portable, I would recommend the Sony ICF-SW7600GR which is constructed extremely well. It is also a good-performing radio (on MW it outperforms the CCRadio) and has the synchronous selectable-sideband detection circuitry which makes it stand out from all other small portables (except the other Sony's which have the feature; the '7600 is the least costly Sony one to have it). If you also buy a Sony AN-LP1 antenna, you have a great travel combination which can also be used to very good advantage around the home.

I have five of these - two '7600G's (the predecessor to the 'GR) and three 'GR's. The oldest 'G is now seven years old and still works as new. All of them (the "youngest" was bought in 2002) have held up very well; all get used and none have ever exhibited any problem whatsoever. I use NiMH rechargeable batteries in them which makes operation extremely economical (an AC-adapter is not necessary or even desirable).

Why do I have so many? Because I want to make sure I always have a portable SW radio. I thought that if one went bad, at least I'd have others. Naturally, the Sony's have NEVER gone bad, at least so far! (I suppose that if I had bought just one, it would have "died" the day after the warranty expired!)

Give the Sony ICF-SW7600GR a try. I think you'll like it.

Best,

Joe

P.S. Note that you can GREATLY improve SW reception on the '7600 if you buy an AOR WL500 Window Loop antenna; however, the price for it is $200; I don't know if that would be cost-effective for you. The WL500

is not as convenient for travel as the AN-LP1, it has a
"pain-in-the-neck" battery replacement procedure, and you have to buy
an AC-adapter separately for it (at Radio Shack or some other
electronics store). But its performance makes all those inconveniences
pale into insignificance. It is one heck of an antenna!

P.P.S. The Satellit 800 is a very well-designed radio; its
construction-quality is another matter, however. If you do choose to
buy one - note that it greatly outperforms ANY portable, including the
Sony I recommend, when used with an appropriate external antenna - buy
it NEW from Universal and ask them to bench-test the particular unit
they are going to send you. That way, at least you'll have no
"surprises." I would NOT be the "first kid on my block" to buy ANY
newly introduced Eton/Grundig radio, such as the E-1. Let someone else
be the guinea pig! Frankly the E-1 doesn't look to me as though it's
going to be a winner. I personally have absolutely NO interest in "pay"
(XM or Sirius) radio, and its SW/MW reception and, especially,
construction quality are a big question mark. Eton's track record, at
least as observed with the Satellit 800, has been mediocre at best.

That's just it. I bought the 909 quite a few years back and never
dropped
it or anything. It just happened that one morning I got up and there
was
this little black blob taking over the bottom right side of the LCD
display.
By then the warranty was long gone, but I took it back to the store,
and
they basically didn't want anything to do with it. The 909 still works
fine
but the "blob" takes out a portion of the screen.

Unfortunately I avoid Ebay like the black plague, and the best Radio
Shack
by me either sells the YB400, the Sat 800 or the wind up FR200's, plus
the
Eton line (but not the E1...yet). The YB is nice but even smaller than
the
909 and I'd like to move up in size rather than down. The Sat 800 is
huge
and comes with two opinions from people, they either love it or it
didn't
meet their expectations.

I'm not looking for Drake performance. The 909 is good, but I imagine
the
800 is a bit better overall for pulling in stations.

Dear Conan Ford,

Last week the Shortwavestore.com (a Canadian company) had them. I tried to go onto their web site today to get the URL for you, but when I did so, Durham Radio came up. Did they take over the ShortwaveStore? You might try telephoning Durham to see if they have (or can get) one for you at a reasonable price. They do not list the '7600 on their web site.

Another US dealer who sells the '7600 is J&R Music World in NY, an extremely reputable company with which I have dealt for many years. You might want to telephone them also.

In my opinion, the Sony ICF-SW7600GR is the best small portable SW radio currently being made. Note that it is made in JAPAN, not China.

Best,

Joe

Can anyone point me in the direction of a retailer in Canada that sells the
ICF-SW7600GR, perferably for a decent price? If not, who is the best to
order from in the USA for shipping here?

This no-prices-online policy for Sony is driving me nuts

I've got a TMB 115/7 CNC and I'm waiting for a Losmandy GM-8 with the Gemini system.

Thomas is upgrading the tripod for me. If I don't like it, I've got a friend with two spots on the list for the new smaller mount AP is bringing out "soon" and he only needs one.

Having the individual parts weigh less than 25 pounds is a good idea because of a back injury.

I'm getting a 2" feathertouch focuser to put behind the 3" focuser, but I wanted it in "clear" (silver) so Werner said to expect it to take 2-3 months.

Other than the tripod, it's practical to fly with - If I take off the dew shield it'll fit the C8 case from Stellarvue. I'll keep a spare tripod in Naples.

When I'm home I have unlimited access to a 16" classical cassegrain with optics by Perkin Elmer, and a good friend has a TMB 175/8 and he'll be getting a 228/9 next month.

If you attend Stellafane, contact me direct for instructions on how to find me. I bring my "portable" 7030+ there. It was put together with a similar philosophy.

Regards,

Mark

American bosses benefit - Walmart, KFC, McDonalds', Boeing, GM make plenty of money in both directions in China by hiring low cost peasant labour, and selling to both chinese in cities and exporting to America, while American workers lose out.

Maybe, America should turn socialist, so businesses can be (partially) nationalized, and profits can be redistributed to every common worker.

Source record: 13906

Hi Mark,

When did you buy your set? I got mine last year; I did have the factory replace the 2.2 kHz SSB filter with their 2.4 kHz (nominal - measures 2.2) crystal filter (and what a performer THAT is!) - I also had the daughter board fitted - but I find the other filters to be first-rate. I had the 6.5 kHz filter (from the basic 7030) added in also, so I have 5 filters, which is all I personally need. But I have found that the audio is superb with the 5.5 kHz ceramic filter, the one I use most of the time with sync on, and, of course, using the crystal filter when ECSS reception is desired or when listening to sideband, I find the sound is as good as regular AM. I do not know the skirt measurements for my particular unit, but I rarely hear interference that I can't get rid of and I almost never hear heterodynes.

But you're right - if the stock filters don't satisfy you, it is VERY easy to replace them with ones you prefer.

That's just another nice feature of this radio.

Best,

Joe

I like my 7030+ but I'd have dumped it if I couldn't put in filters better suited to my tastes. The stock ones are narrow enough to give muddy sound or wide enough to let you hear hets from an adjacent channel.

Fortunately, it's easy to find and add filters, and if you choose ones with steep skirts you can get beautiful audio without losing performance.

Thank you Joe! Very informative. And, as of today, I did forgo on the Sat 800 and purchased a ICF-7600GR. The last 72 hours has been nerve wracking, but after reading every type of review I could find, I decided the Sony was a better purchase for me, and for what I listen to.

Thanks again to everyone with their comments and advice! It was all very useful.

Well,I only paid a couple of bucks plus Mississippi RIPP OFF 7% sales tax for my $2.00 Transceiver radio so I am going to hang on to it whether it works or not.I will try it out (although I am in no hurry at all) though whenever I find out more information about how to properly hook it up.I don't get out driving around at night time anymore because I like to be at home before night time rolls around.Perhaps in two or three months when it starts getting dark here after 8:30 PM night times,I might take it with me to one of the amateur ham radio meetings at the Red Cross building.Their meetings over there on the third Thursdays of each month start at about 7:00 PM.I can take it over there and ask a few quick questions and I can drive back home before night time.Meanwhile,I am going to put it in one of my closets and forget all about it.

Off the top of my head, these chinese PLL radios (whose performance
ranges from acceptable to excellent) all have tuning knobs:

Tecsun
PL-200
PL-550
PL-350

Degen
DE-1103

The PL-350 is just a cut-down, smaller version of the PL-550, I believe.
Smaller speaker and thus smaller case.

I imagine that the percent of these radios actually exported is probably
quite small. I imagine less than 5% are exported.

A correction, Grundig/Eton is not a chinese company, but rather they just
take chinese radios and rebrand them, then sell them again. Kind of like
how the GE and Emerson DVD players at Wal-Mart are only licensed brands,
but are actually made in China.

Shortwavestore.com has always been owned by Durham Radio. They just stopped bothering with the Canadian side of the site and redirected it to durhamradio.com. I found this out about a year ago by running a whois query on both of them when I noticed the prices on the Canadian Shortwavestore.com (then a separate site) and durhamradio.com were identical.

good move FireStarter5. great radio, i have 2, and a pair of an-lp1 ant.
the older one goes with me when i travel domestic. newer one, tested and
still in the box, is the back-up. the supply of the 7600gr won't last
forever, i should get a third one. it's a tough little radio; takes a
lot of abuse. the Universal radio bag hold's the radio and ant. also
got a reel ant in there, great bag. when i leave the states, i take a
badly beat up RS390. works fair, and i don't believe anyone would steal
it. you won't be sorry, enjoy...

By Stephanie Nolen
Saturday, March 26, 2005
Johannesburg

Violet Gonda has minor celebrity status in some parts of Zimbabwe, as an articulate, eloquent and honey-voiced presenter on a hugely popular radio show. But she won't be signing autographs any time soon: Because of her work for SW Radio Africa, Ms. Gonda has been banned from returning to Zimbabwe (she broadcasts from London).

Now her parents back home in Butare can't even hear her voice. For the past few weeks, the Zimbabwean government has been jamming the station's signal, determined to stifle access to independent radio in the run-up to the parliamentary election on Thursday.

The past few years have not been good ones for independent media in Zimbabwe: The government shut down four newspapers and a radio station, then outlawed private broadcasting, leaving only the state-owned broadcaster and newspaper, plus a handful of pro-government publications.

In this environment, radio broadcasts from outside the country have taken on a new importance: Zimbabweans seeking more than the rabidly pro-government coverage have turned to SW Radio Africa, broadcast on short and medium wave, and to the popular Studio 7 program of Voice of America.

With no broadband in Zimbabwe, with Internet access available only on a pay-for-use basis in urban areas, and with most of the country still reliant on transistors for their news, the old-fashioned radio is still a key tool for opponents of President Robert Mugabe.

Recognizing that, a number of international organizations trying to support democracy in Zimbabwe have been distributing radios around the country in the lead-up to the election -- although none wanted to discuss their projects, since the government could interpret supplying access to media as a subversive act in today's Zimbabwe.

Studio 7, launched in 2003, is the Zimbabwe program of Voice of America, which is funded by the United States. The program is broadcast in Shona, Ndebele and English, and is beamed into Zimbabwe from a transmitter in Botswana on the AM signal and by shortwave.

SW Radio Africa has its roots in a station Gerry Jackson tried to start in Harare in 2000, as once-stable Zimbabwe began its descent into chaos with Mr. Mugabe's highly politicized land-reform program, which devastated the economy.

A former DJ on the state-run Zimbabwe Broadcast Corporation, Ms. Jackson was fired after she put callers on air who were critical of the government. So she took the government to court over their monopoly on broadcasting, and in 2000, the Supreme Court ruled that private radio was legal.

Ms. Jackson hastily imported a transmitter from South Africa and set up shop: a station called Capital FM in Harare. "Six days after we started, the government shut us down at gunpoint," she recalled in an interview from London this week.

Ms. Jackson decided the only way to get independent radio into Zimbabwe was to do it from outside the country; she left for London and took advantage of improving technology to broadcast back on shortwave radio.
She got funding from international pro-democracy groups, hired six other Zimbabwean journalists and they went to air in December, 2001.

The government lost no time labelling them enemies; they were declared "banned" and the Justice Minister said in Parliament that if they return they will be jailed.

"I can't even describe the feeling, when someone decides from nowhere that you can't go home," Ms. Gonda, 30, said. She had just graduated with a master's degree in journalism when Ms. Jackson, 50, offered her the job. "I jumped at it, but I never imagined it would mean that I can't go home."

SW Radio's five hours of daily programming is recorded in London, beamed by a satellite to a transmitter and broadcast into Zimbabwe. Ms. Jackson declines to say where that transmitter is, but notes that it could be almost anywhere in the world.

But short wave, as SW Radio Africa recently learned, can be easily jammed: A few weeks ago, they found their broadcasts suddenly rendered into crackle inside Zimbabwe.

"Clearly, the government sees us as a threat," Ms. Jackson said.

The Zimbabwe Media Monitoring Project, citing information from the Washington-based federal International Broadcasting Bureau, says the jamming signal is originating from an air base in central Zimbabwe. The government denies jamming the station.

Within the past few days, a neighbouring country -- again Ms. Jackson won't say which -- agreed to let SW Radio Africa put up a transmitter, so they have added medium-wave programming in the morning, which is not being jammed. Since the jamming started, Ms. Jackson said, they have a new understanding of how important the broadcast was to people in Zimbabwe, who flip madly between frequencies to try to stay with the show.

" People are desperate for information in a country collapsing, where rumours make it worse," she said. "It's a lifeline."

The station started this morning at 09.00 utc and will broadcast through until 16.00 utc and every Saturday thereafter, on 15,725Khz with a 20KW signal. A strong signal is being reported.

There are future plans to possibly raise the power to 50KW.

It has been confirmed to by the station manager, Neil Gates, that the transmitter is in Milano, Italy (and is legal).

ZCZC AP12
QST de W1AW
Propagation Forecast Bulletin 12 ARLP012
>From Tad Cook, K7RA
Seattle, WA March 25, 2005
To all radio amateurs

SB PROP ARL ARLP012
ARLP012 Propagation de K7RA

Seasonally this is a great time for HF propagation, as the Northern Hemisphere passed into spring last Sunday. But sunspot activity is low as we slip toward the bottom of the cycle, still estimated at nearly two years away.

The weekly average of the daily sunspot number slipped over 16 points from last week to 44.3. The daily average of solar flux was down over 12 points to 92.1. Geomagnetic A and K indexes showed stable conditions, but slightly unsettled on March 19. There were many periods with the K index at zero or one, even at high latitudes. For the entire day on March 22, the College K index from Fairbanks, Alaska was zero, which produced an A index for that day of zero. This was even slightly lower than the planetary or mid-latitude values for that day.

The forecast for this week shows more of the same, with solar flux slipping below 90. A solar wind stream may cause some unsettled to active conditions. The U.S. Air Force shows unsettled to active conditions with a planetary A index around 15 for March 27-29. RWC Prague shows unsettled to active conditions for March 26 and 27, with unsettled conditions for March 25, 28 and 29.

Noel Petit, WB0VGI, sent a link to a magnetometer in Minnesota which is on a rural farm north of Minneapolis. The approximate location is northwest of Cambridge, Minnesota at 45.616 degrees N, 93.312 degrees W. You can observe the output in terms of K index from a server at Augsburg College at http://space.augsburg.edu/ucla/Pictures/kIndex.png. This is similar to a K index from NOAA generated by 9 magnetometers in North America at http://www.sec.noaa.gov/rt_plots/kp_3d.html.
The Cambridge K index gives a nice localized indication of real time geomagnetic activity at that latitude in the upper Midwest.

Reminiscence of the late 1950s and the peak of cycle 19 continues to generate email. I'll let John Goewey, KI5IG of New Mexico tell it:

''During that peak K2UKN (Charles Groves) had a regular schedule with JAs every noon time on 6 meters. I DXed a YL on 6 meters in MO while I was WA2AJM in NJ. The YL had a curtain rod out the window, she said. Another unusual contact was off my light bulb dummy load, in the basement shack. QSO was 20 miles away, 6 meters as well. Yes, I thought it was always going to be that way also.''

Emory Gordy, W4WRO was only 13 until the end of 1958, and writes, ''I was first licensed in 1958, the era of the BIG ONE. Being a novice-neophyte I, like others, innocently thought it would last forever. The fact that it hasn't been repeated didn't dampen my enthusiasm for ham radio''.

And last, Peter Hansen, W8TWA wrote: ''Having started my ham radio activity as a Novice in 1954, I have seen the best and worst several times now. One thing I miss is the two weekend ARRL DX contest. Since the two weekends were separated by about a month, the March weekend seemed to be a bit more exciting as we approached the equinox. The two weekend contest was a great opportunity to observe the changing conditions as winter came to a close. Maybe it was my imagination, but it always seemed easier to work the polar path, both long and short, to VU, UL, UH, UM, etc (excuse the old prefix references.) in March than it was in February. And while there were obvious variations in geomagnetic activity and availability of stations between the two weekends, it always seemed that March was better for that path. However, another contributing factor could have been that we spent more time listening because many of the stations had already been worked on the first weekend. To this day I continue to monitor the flux, A, and K indices before the contest, and find it of interest how that nuclear furnace 93 million miles away continues to affect our everyday living, as well as its influences on our hobby''.

If you would like to comment or have a tip, email the author at k7ra@arrl.net.

For more information concerning radio propagation and an explanation of the numbers used in this bulletin see the ARRL Technical Information Service propagation page at http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for March 17 through 23 were 35, 37, 41, 39, 53, 49 and 56 with a mean of 44.3. 10.7 cm flux was 101.4, 96.5, 93, 89, 89.7, 87.3 and 87.7, with a mean of 92.1. Estimated planetary A indices were 12, 9, 14, 5, 8, 3 and 4 with a mean of 7.9. Estimated mid-latitude A indices were 8, 6, 9, 4, 5, 2 and 3, with a mean of 5.3.

Probably go for $150 to $200 on Ebay.

** U. S. A. HAM VS. SPY (RADIO) RETURNS

Yosemite Sam is back on the ham bands, but he`s not saying what he said a few weeks ago. In fact the New Mexico based transmitter is now using double sideband on 3.890 MHz with a new voice saying:

AUDIO: buzzing followed by ``inclines like
this.``

That recording was made by Joe Tyburczy, W1GFH, in Burbank, California. And in case you are wondering what the voice following the data burst is saying, we will slow it up a bit for you.

AUDIO: ``inclines like this...``

Yep, its says -- quote -- inclines like this`` though its exact meaning is unknown.

As previously reported, On Wednesday, February 16th, Mike Stark, WA5OIP and Mike Langner K5MGR set out to locate the signal then on 3.700 MHz. The found it coming from the same MATIC Company test site on the Laguna Indian Reservation in New Mexico. When it turned up on 3.890 MHz Langer took to the road and again found it coming from the same location. (QRZ.com via Amateur Radio Newslineï¿½ Report 1441, March 25th, 2005 via John Norfolk, dxldyg)

It has also been reported being heard on 1770.

Bear in mind that the MATIC Company facility is not a US Government operation, they are merely a contractor.

Was just playing on the 10 mhx. band this morning
and found the Willuna Austrailia broadcasting
a fax with a wx char. It
was comig in at 15 over S9.

I'm in a new QTH where I cannot put my antenna
outdoors. I'm on the 1st. floor of a brck building and have my
antenna m0utned near the ceiling facing E/E.
I have little to no electrical interference.
I'm using the RF SystemsEMF antenna.

Sw Broadasts come in very well also
at least above 4 mhz.

RIP RADIO SHACK CANADA?

A US district court judge, in Forth Worth, Texas has ordered the licensing agreement whereby Intertan of Barrie, ON uses the Radio Shack name until 2010 to be terminated immediately. Intertan, which is a major competitor of Radio Shack in the US, was bought out by Circuit City in March of 2004. This sparked the lawsuit as Radio Shack in the US cited a breach of their agreement. All signage and references to Radio Shack in Canada must disappear by June 30th. At present there are 950 stores bearing the Radio Shack name.

I checked out Radio Shack's US site http://www.radioshack.com

As for shortwave receivers they only carry the Grundig FR200 and Mini PE100. So, Radio Shack Canada must have had their own distributing agreements. Also, Nexxtech and Centrios, which have become their house brands in Canada, are NOT Radio Shack companies but divisions of Orbyx Electronics (Mark Coady, ODXA via DXLD)

I believe Intertan also runs the RS stores in Australia and the UK (John Figliozzi, NY, ibid.) I always found that confusing: "Tandy" stores in the UK were actually part of the US Radio Shack family. "Radio Shack" stores weren't (Richard Cuff / Allentown, PA, ibid.)

Information gleaned from the corporate section (along the bottom) of the radioshack.ca website:

On June 20, 1986 all of Tandy Corporation's international assets in Canada, Great Britain, and Australia, were put under the interTAN, Inc. banner and based out of Barrie, ON.

A note about the Circuit City takeover only mentions stores in Canada so I figure that the assets in Great Britain and Australia must now be controlled by a different corporate entity.

The corporation in Canada, aside from the warehouse in Barrie, consists of 500 company owned Radio Shack stores, 340 Radio Shack dealers, 80 Rogers Wireless stores, and 40 Battery Plus stores. The Radio Shack dealer stores usually consist of a small town electronics or photography store with a Radio Shack section - Bobcaygeon has one (Mark Coady, ibid.) (DXLD-5-053)

WHY DISCONTINUE DRAKE R8B

Say it isn't so! The Drake R8B general coverage communications receiver is discontinued. Tom Walsh K1TW of Boston Area DXers called the R.L.Drake Company; "A very sympathetic Drake sales person explained the decision was based on economics. As I understand it, the decision to discontinue is based on several factors. (1) The supply of parts used in the current design has dwindled to where Drake can no longer sustain new production. (2) Therefore, in order to maintain the R8 in their line, they would have had to redesign a significant part of the radio because of a shortage of parts for the older design. The engineering costs are too high to do that. (3) The demand for HF shortwave receivers has fallen. I felt the person I talked with at Drake was as sad as I that this day had arrived. He understood this is still one of the finest receivers in the market at this price." (via Bruce Conti, NRC IDXD March 25 via DXLD)

I've had my radio for about 3 years, and I bought it second hand.

The filters I use are crystal ones made by filtronetics for the Racal 6790/gm. I created a shelf on the inside of the back panel with some angle aluminum and flat stock to hold them, and they're wired in with RG-174.

The one marked 3.24khz reads 2.9 and has a shape factor of 1:1.33 and the one marked 6.8 reads 6.1 I don't know what it's shape factor is, but I'm sure it's steep. I experimented with a few other filters before deciding on the 6.8

With those filters the sound is very close to what I get from my Harris RF-550.

Regards,

Mark

> Boston Acoustics (BA) Recepter AM/FM Radio
> http://www.bostonacoustics.com/hs_product.asp?ProductID=213
>
> Has anybody taken a Look-In-Side one of these BA Recepter Radios ?

Yes, I have and I don't recommend anyone try to do so.

The entire RF section is inside a shielded can which I didn't open.
This "can" is located in the rear, behind the speaker, up against the antenna
connections. The power supply and "logic" are located in a seperate
compartment on the right side, behind the display.

From what I gather from the B.A. faq's the RF board is embedded in
epoxy to prevent modification - sigh.

> Any Idea about what the size of the AM/MW Ferrite Rod Antenna
> in the BA Recepter Radio ?

It is about 5 inches and runs along the left side of the radio, from front to back.
It works reasonably well mated to the sensitive MW receiver. The rear panel
allows you to disconnect the "rod" and connect your own MW antenna.

The only fault I find with the MW receiver is that the filter seems quite wide
and if DXing adjacent channel monkey chatter will invade when your desired
station fades. This is where a loop comes in handy.

I would guess that B.A. chose a wide filter for MW to take advantage of full
audio response for the speaker. The speaker sound is absolutely superb for
such a relatively small radio. Sounds like a big wooden cabinet from the
golden days. Highly recommended for the bedside when the spouse won't
tolerate a communications receiver in the bedroom :-))

The sock puppet lady you're thinking of might be Elizabeth Boarder. But I
think the original poster knows about her.

Indeed. Human sacrifice at Bohemian Grove. The Freemasons sabatoged the
Space Shuttle as a human sacrifice. It's all been explained on SW radio.

SW radio has never been more entertaining! The only sadness might come from the unfortunate situation in which only Americans who are burning with the flameing awareness of Hidden Knowledge are to be found on our airwaves.

Let's hear from the rest of the world, as well!

Because to him, the right thing is honoring Terri's wishes, if you believe his sworn testimony. If you don't, well, you're entitled to your view, but there is no evidence to contradict his testimony.
> .
> It seems like the Husband is afraid to let his Wife be

...or else he is committed to carrying out her wishes. The law supports him. We can doubt his good intentions, we can imagine that Terri would want to be kept "alive", we can even believe that she can be rehabilitated. But none of that is supported by evidence.

> i do not trust this guy's motives ~ RHF
> .
A lot of people don't. And who couldn't sympathize with the Schindler family? What a terrible situation.

The most disturbing aspect is the politicizing of this case. The Republicans are really running amuck, searching for an activist judge to do an end run around existing law, demonizing the conservative Judge Greer who has simply maintained a strict interpretation of state law, and accusing "liberal Democrats" of advancing their pro-choice stance. And trying to

criminalize Michael Schiavo because we can't accept what he says are the wishes of Terri. And with all due respect to the House Majority Leader, one can only wonder which lobbyist group is paying Tom DeLay for butting into this case.

Lost in the whole affair is the fact that people are being taken off life support every day, all over the country, and you don't see the Republicans running to their aid. Especially in Texas, where then Gov George W. Bush signed into law a provision that allows hospitals to terminate life support for "hopeless" patients, against the wishes of family members or legal guardians. What did he say, "...err on the side of life"? Sure George, when the spotlight is on you, pander away.

> 15 years??

Brenda, since this is going on not too far from where I live I have seen the fighting in the local news for years and years. Some of her "Supporters" are now demanding that Governor Bush call out the national guard and order them to forcibly remove her from the Hospice center where she has been cared for, in violation of court orders. This isn't the first time her feeding tube has been removed, or the first round of protests on both sides of the issue. It is turning into a real circus. They have had to arrest well meaning people who kept trying to sneak in and give her solid foods she can't handle. As much as I value my life, I wouldn't want others to suffer for 15 years while I withered away and finally died.

Also, a lot of money and medical care have been denied to others while they have spent it on her. Some of her care has been paid for by donations and income from the Hospice Thrift Stores, but the bulk of the money is from the state of Florida's medical program for the needy. The situation is so bad they no longer allow people to show up at the local county health center and wait to see a doctor. You have to try to telephone them every morning and hope your call gets through before they shut off those phone lines for the day. If you don't have a telephone, you're screwed. I'm luck in that I get my health care from the VA, ut you still need a telephone or have someone willing to receive calls for you about your appointments.

Will you be trying to fix it yourself? Are you familiar with using test equipment?

The easiest things to check are the battery connections -- make sure they're clean -- and the earphone/headphone jack. The jack might have a poor connection which will prevent the speaker from working. Push a correct size plug in the jack a few times with the radio powered up and listen for sounds from the speaker.

Ohh, lucky you. I love the TMBs. Awesome optics; built like small battleships-- at least the older ones were. A friend of mine has a 152 mm TMB, not exactly portable, but he does get it out to star parties now and then. I've had some unreal views of Saturn, Jupiter and Mars with that scope.

> When I'm home I have unlimited access to a 16" classical cassegrain with
> optics by Perkin Elmer, and a good friend has a TMB 175/8 and he'll be
> getting a 228/9 next month.

I have another friend who recently took possession of an 8" and 10" TMB. He has recently purchased a Paragon and a Mountain Instruments mount to put them on in his backyard observatory. They are truly massive scopes, not the least bit portable!

> If you attend Stellafane, contact me direct for instructions on how to
> find me.

I haven't been to Stellafane yet, but it's on my list of star parties I need to visit. I'm trying to decide whether I want to attend the Nebraska or Texas star parties this year. Decisions, decisions...

Clear skies and good propagation!

That is because the law prescribes techniques to end the
lives of dogs and murderers. But terminal patients?
The only way you can do that legally is to pull out the
tubes and let them die naturally no matter how long it
takes.

The problem here is not the people, it is the law and
the government that enforces it.

You might check the Al Jezera website. Unlike US media which
is being carefully self-censoring, Arab news medias have had
no problem showing other Arabs the dead bodies of Iraqis AND
Americans laying in the streets...

I think the infamous clip of an insurgent pointing a RPG at
US troops and getting hit first with a bullet through the
chest - which you saw come out - and then one right through
the skull, leaving him collapsed dead in a puddle of his
own blood, was an Arab production.

Whoops, I meant to bring this on topic by discussing how
various shortwave broadcasts from overseas are reporting
this.

By and large, I notice that the general feeling among
those who are bothering to report this is "... WTF?!?"
Most countries seem a bit dumbfounded at all the hoopla.

Except for Radio Habana, which is using this as another
example of what's wrong with America...

America will be something like this in a few years, after the next "spectacular" terrorist attack comes and Bush abolishes the Constitution and institutes rule by executive order. No more internet feeds, no more BBC on satellite radio, nothing but Fox News like broadcasts all the time. If you want real news, you'll have to turn to SW.

A couple of years after those satellit radios came on the marketplace,I read somewhere on the internet those satellit's are not as good as some folks say they are.The ONLY way I would buy one would be if I bought one at the Goodwill thrift store (or similar junk store) for only a few dollars. (pocket change) I really hope though I never see one because I don't like and never have liked that Stupid satellit name.What in the hell were those folks thinking?

I agree with everything you say here.

I remember the series of modules for the High erformance HF Receiver
from the Amateur' Handbook and the discussion on the mixer as the
first active stage.

Still, to get R390-like performance (quietness, more than anything
else) a fairly esoteric receiver is necessary.

Now i hv a heavily modded kenwood r1000 with homebrew sam det and a
new icom r75 with kiwa mods, and now i begin to understand what drives
all these discussions and loyalties about radios.
The r1000 is a very nice little radio, especially with the mods...the
r75 on the other hand is almost uncontrollable with more sensitivity
than is good for it. the r1000 is very nice to listen to, the r75
sucks without a pair of sony headphones. but the ability to pull sta
out of indiscernable muck is great...the r75 has more buttons, knobs,
etc to play with to get there. and you mean to tell me that the more
expensive radios (drake r8b, etc.(are even better than this? holy

I've yet to see a TMB that wasn't well made with beautiful optics.
Thomas is a stickler for quality.

I was fortunate to get one of the last of the classic CNC's. The new
CNC's have a 3.5" feathertouch, and I'm sure it's nice, but the two
focuser system I'll have will give me more infocus without needing to
change the extension.

You'd me surprised what some folks think is "portable". My friend
treats his 175 like a grab and go. I'd question his sanity, but I enjoy
the views. His 228 will also be a "portable" but only for "special
occasions". (Knowing him, this will translate to - "It looks pretty
clear".)

Honestly, Stellafane is more about people and equipment than the sky.
More often than not it'll rain on at least one of the nights, and they
probably get two bad nights more often than two good ones, but the
people are great and you get to check out lots of equipment including
some innovative home brewed stuff. Before he had a business, when he
was using salad oil between the elements, Roland brought his first Apo
refractors there. John Dobson is also a regular.

When it rains, I've got the radio.

But you just need one great night where you can find several M objects
with just your eyes to get hooked.

The real crime is the media circus and gov't attempting to interfere in medical and private family matters. However, it looks to me like the US legal and political systems are actually working here: the politicos can't interfere according to law. It should be clear that end of life decisions are made in the 1000's every day, privately. It is only the conflict between two parties that has sent this into the stratosphere.

Ironically, as the media exploits this latest fiasco, the on-air hosts find their groove. Rhodes is thrilled to get her own cover story in the Washington Post Magazine and a billboard in Times Square. Maron has worked through his anxieties, as have Garofalo and Seder. The New York ratings are unexpectedly high - Franken beats Rush Limbaugh, and Rhodes outpaces right-wing rival Sean Hannity. Encouraged, management is able to attract additional investors long enough to keep the venture afloat through November.

In December 2004, a new round of investors brings Air America a measure of financial stability. With 40 affiliates and counting, the voices of the left are now being heard, loud and clear, from coast to coast.

http://www.hbo.com/docs/programs/leftofthedial/synopsis.html

Now you know...the rest...of the story.

News stories are always relevant to SW. Just not about technical aspects of
the hobby.

4503. Matt Drudge is a horse's ass

Newsgroup: rec.radio.shortwave
Date: 2005-03-26 17:57:52 UTC
From: David <rickets@knac.com>
Message-ID: <oj8b41p7vtttajc5h57nu61ntebmguadj6@4ax.com>
Source record: 14040

Air America gets a one-year birthday present from HBO on March 31 when the cable network airs the documentary ï¿½Left of the Dialï¿½ by director Patrick Farrelly and producer Kate O'Callaghan. The film tracks most of the past yearï¿½s travails as the liberal network started, faltered and was yanked off the air in some major markets. A Drudge Report review of the documentary played up ï¿½The doubts. The lies. The bounced checks. The heartbreak.ï¿½

Air America Radio president Jon Sinton told Billboard Radio Monitor ï¿½This documentary is a sanctioned event. Matt Drudge, notwithstanding, weï¿½ve signed off on it. The filmmakers had access to us and it truly is a story of birth, death and resurrection. Itï¿½s a very redemptive story. Weï¿½re not displeased with it at all.ï¿½

An HBO release says the documentary ï¿½reveals the nervous expectations of investors who staked their careers on the network,ï¿½ including Evan Cohen, Air Americaï¿½s former chairman, David Goodfriend, who becomes the networkï¿½s general counsel, and investor Doug Kreeger. Along with profiles of many of the networks personalities, descriptions of nervous debuts, shouting matches and other frenzied activity, HBO says the documentary closes late in 2004 when, ï¿½in December 2004, a new round of investors brings Air America a measure of financial stability.ï¿½ HBO pegs the affiliate roster at 40 by yearï¿½s end.

As of March 23, Air America has added another 11 stations and now boasts 51 affiliates.

The film will debut on Thursday, March 31 at 8pm (ET), with other playdates on April 5, 11 and 14.

I have a Japan Radio Company NRD-525 with the VHF and UHF converter installed. No other options are installed. Comes with 2 copies of the owners manual, original sales brochure and receipt. Radio is in great condition and works like a charm. I will ship in conus for $575.00. Serious inquiries will receive HI-RES pictures via e-mail. Contact n7mfr@yahoo.com.

Thanks,

<g> Stephen and I are arguing about his assertion that M. Schiavo will come into a million dollars after her death. We've gone back and forth on it a couple of times. Buzz thinks that we're arguing about whether or not she had a living will or had signed a similar document. His calling me stupid was at the least premature. Maybe the other posts in the thread hadn't shown up yet. I can see his confusion if a) that was indeed the case and b) he hadn't

read any of my other posts in which I pointed out to someone who didn't know that she didn't have a living will, etc. So, I'm too bent out of shape about it. I'm just waiting to see what he has to say.

Which Al Jazera web site? A month or two back I heard a radio
interview, (but damn my brain fade I can't remember where, R. Aus's
Media Report, perhaps) that one of the "Al Jazera" web sites has
NO connection to the TV network, they just got the domain name first.

This was going to happen eventually. The receiver at some point will
have to be re-engineered to use new components even if the design
remains the same.

Generally the march of component improvement is a move to smaller and
more highly integrated parts so radios can be smaller and consume less
power for the same or better performance.

Summary:
There is not enough of a market for them to recover their engineering
costs, which must occur due to a parts shortage for the current design.

If the market improves then they may jump back in with a new design.

I have a better idea. Why don't you buy some stock in a company and
participate in capitalism. Make the right decisions and you will make
money instead of just coveting what someone else has.

4526. What is wrong with E-bay sellers?

Newsgroup: rec.radio.shortwave
Date: 2005-03-26 22:29:24 UTC
From: Conan Ford <conanford@com.hotmail>
Message-ID: <Xns96259D937FC45conanfordhotmailcom1@24.71.223.159>
Source record: 14064

I emailed a seller who is selling the ICF-SW7600GR, asking about shipping to Canada. His response?

"Hello,
shipping will be $45plus canadian custom and duties.
however brockage fee and taxes must be paid up front."

My response:

"No, no, I didn't mean for same day air. How much for ordinary shipping?"

...

Now I know that he means to charge me $45 + brokerage fees + customs (about $60) and ship it ground or as a small parcel by air, taking either 4 weeks or 10 days to deliver, and earning him a tidy profit on just the shipping costs. I also know that I could ship this same radio to the United States, in its full box, for $30 Canadian, with delivery within 2-3 days, or $15 with delivery within 10 days.

4527. Recommendations for a high-performance SW receiver.

I have a Grundig Satellit 800 coming my way, and some of my fellow ham radio friends are trying to convince me that I've made some kind of mistake.

The AOR 7030 is darnedably expensive, but I did have a question as to performance characteristics and enhancements. Is there a shortwave radio superior to the AOR 7030? Just for curiositie's sake, is there such a radio that IS more superior, if money were no object? Or is there one superior in quality that is actually less expensive?

Is there perhaps a website that has a fairly independent review of these radios, and makes comparisons?

Any help greatly appreciated.

(I do know of radio netherlands, and universal radio.)

The R8 was introduced several years after the R7 went out of production.

My guess is if they bring out another radio they'll wait for demand to
build so the new radio starts out with strong sales.

It probably won't be called an R8c.

And if it happens, odds are it'll be a great radio.

They aren't closing up shop, they simply have to drop the name and references to it.

Radio Shack here in Canada used to be owned by Tandy. That dates to the late sixties when Tandy actually bought a leather company here, and then a couple of years later the president of that company was put in charge of Radio Shack in Canada, with the first store opening in 1970. I can remember getting a Canadian catalog in '71 or '72 and it wasn't mail order, but there were no stores here in Montreal.

IN the mid-eighties it was let loose, though I thought there was still some obeyance to Radio Shack in the US. But that's when the lines started diverging, with not all items in the US catalog available here in Canada. Intertan would be ordering it's own supply of items. The Color COmputer, for instance, was dropped here in Canada a year or two before it was dropped in the US>

IN recent years, I'm not sure if it started happening before Intertan was bought by Circuit City, there had been less and less sold in the stores that had the Radio Shack name on it, with a lot of items that had known brands on them. New house names came along, but at least some of the items were identical to those in the US under the Radio Shack name. THose descendants of the Minimus-7 are still in the stores here, though they now are labelled "Centrios" and I could have sworn there was a period when they were labelled "RCA". I had thought the new names were just Radio Shack trying to be more hip, ie that it was happening in the US too.

The only thing I see in the current flyer with "Radio Shack" on it is the batteries. Of course, the stores and the flyers are labelled "Radio Shack".

If the current Radio Shack stores close, then Circuit City has nothing left of what they paid for some years back. This ruling only means they cannot operate under the "Radio Shack" name, not that the stores have to close down. There is absolutely no reason to expect the stores to close.

And since there is little left that carries the "Radio SHack" name, there is little to liquidate to clear it out. I'm not even sure if

the ruling requires them to drop "Radio Shack" items, after all it is a brand just like Sony or Ford. All they have to do is change the signs on the store, come up with a new name, throw out the old stationary.

And of course, this has happened before. Drake was out of the receiver
business from about the mid-eighties (when they dropped the R7 and
any ham equipment) to when they introduced the R8 in the early nineties.

Drake is actually a faily old company at this point. They were around
with accessories before the introduced the 1 in the late fifties, had
a couple of decades of selling shortwave receivers and amateur transmitting
gear, and then dropped it continuing on with satellite receiver equipment.
Their website now talks about a lot of commercial grade equipment, so
the company doesn't seem to be going anywhere, even if it is dropping
shortwave receivers. If they were only making shortwave receivers,
one could imagine they'd not have lasted so long. Most of the old
time receiver manufacturers that went out of business in the late sixties
or early seventies suffered elsewhere, which meant they couldn't afford
to keep the shortwave business going.

The Toronto Globe and Mail had an interesting article today that covered the importance of shortwave radio in getting information into dictatorial countries, in particular Zimbabwe. The dictator of Zimbabwe seized the farms of the Europeans and turned them over to unschooled natives amid much violence. The farms are now run down and not producing. The result has been starvation of the poor. Those who protested this state of affairs (if they were lucky) have been driven into exile. All free radio, newspapers, and other media, have been closed down and only government mouthpieces are allowed. The exiles now broadcast into Zimbabwe from studios in London and transmitters in Africa. This is the gist of the article in the Globe and Mail, written by Stephanie Nolen. (see links below)

The frequencies given in the SW Radio Africa website vary because of heavy jamming by the Zibabwe government and are listed as follows:
TIME GMT FREQUENCY (khc)

1800-2100 6145

1800-1900 11845

1900-2000 11705

2000-2100 11915

1800-2000 15145

1800-2100 3300

intermittent frequencies are listed as 3230, 3300, 4880,and 1197 mw.

Further details are found in the site, <www.swradioafrica.com>

The African website also refers to construction details of a simple device that can be used to null out jamming signals, and possibly interference. These plans are found in the Radio Free Asia site:

<www.rfa.org/english/support/antijamming/index.html>

If you live anywhere near the US border, it is much cheaper to have the package delivered to a depot at the border and go across yourself to pick it up and just declare it at customs. Shipping within the US is cheaper than shipping to Canada, and every parcel crossing the border is subjected to a $35 minimum brokers charge. The post office only charges $10 so USPS is the best method to ship. I have had the ocasional small item shipped through the post office and paid no fee at all. However, I have never had to pay such an inflated shipping cost.....73.....

You can't go wrong with a Drake R8B. I own a Ten-Tec RX340, Drake R8B
and an AOR7030+. If I had to sell two I would keep the Drake.

I agree, I've never owned the AOR
but purchased A Drake R8B last year. I've been a listener since 1958
(yikes !) and have
owned numerous receivers over the years. I was in
the Signal Corp in
1964-66 and
was a Comm. Center Specialist and we used Collins Equipment which wa
wonderful but in my opionion not in the same league as the Drake. I'd
try to find a good used one before they get scooped up
by collectore.

Les - is that antenna switch set up so you can actually simutaneously connect say, antenna A to receiver A and antenna B to receiver B, etc. or can only one antenna to one receiver be connected at a time?

Thanks,

Frank

PS - I put a CW filter in that FRG-100 and it works great. For some reason this 100 did not have the typical "muddy" audio that the other ones I had exibited. Can't figure out why!

You won't do much better than the Kiwa modified R75 when digging out hard-core DX. Any improvement with a Drake or AOR will be incremental (or incidental) at best. Get an external speaker for that R75 and your audio will improve. The R-1000's audio is very hard to beat.

Can't you just kill file the gnome or at least snip his crap if you just
have to respond. I kill filed him so as not to read the constant steam
of crap that emanates from him but that does little good if you re-post
it.

Frank,

Yes, you can connect 6 antennas to 6 receivers at the same time, but,
you have to manually switch the antenna and receiver selector switches.

Yeah, I noticed that that FRG-100 had better audio than most, but never
looked inside. I read your fix on FRG-100 fm problem, good work!

The '7030 is a fine radio, but like anything else, it has its
weaknesses. I *can* say, without any qualifications, that on any
measure the '7030 is in another class than the Sat 800.

Other better radios than the '7030? For ease-of-use, the R8B. For
best bang/buck, the R75 (now discontinued, but probably limited
availability). For sensitivity, the R8500 (also discontinued). For
build quality... none. For filter options, the RX-340, '320,
WR-G303i, WR G313i. For "bulletproof" front end, the R8500, RX-340.
For "James Bond intrigue quality" (if you're into that), RX-340,
WJ-8711/HF-1000. For classic tube quality approaching modern PLL,
R-390, R-392.

In other words, it all depends on what you are looking for. As a
program-listening radio, the Sat 800 is not bad, *provided* you got
one that doesn't have 1001 defects in it. That's kinda a crap shoot.
I'd go with the Lowe HF-150 (*not* the SMC versions -- this radio is
also discontinued) or the '7030.

I had an SMC HF-150, which wasn't very good, but wasn't too terribly
bad, either. I also have R8500s, an R-392, a G-303i, and a RX-340.
The latter two are fine program-listening radios for tougher
conditions and the '8500 is great under better conditions (in AM) or
pretty decent in fair/poor conditions (SSB/ECSS).

>

Let's face it. Despite the fact that the R-8 series of receivers were excellent as far as receiving goes, they were big, hot running, inefficient, amp-eating behemoths compared to some of the more recent receiver designs. I can understand Drake's decision and I'd be willing to bet a year's pay you'll see no more SW receivers from Drake.

> friends are trying to convince me that I've made some kind of mistake.

Oh, it's not that bad (its internals are based on the Drake SW8). It's
just rather big and bulky and used to have its share of QC issues (maybe
buying refurb'd from Universal is still better today, haven't kept track
of that).

> The AOR 7030 is darnedably expensive, but I did have a question as to
> performance characteristics and enhancements. Is there a shortwave radio
> superior to the AOR 7030? Just for curiositie's sake, is there such a radio
> that IS more superior, if money were no object?

Oh yes, there is. It might set you back by a couple 10000 bucks though.
(I'm thinking of equipment like a DASA E1800A.) A R&S EK895 (maybe
EB200) or WJ HF-1000 (still not cheap) would probably also do,
particularly when we're talking about digital modes and real tough DX.

> Or is there one superior in
> quality that is actually less expensive?

Good q. Its main competitor in the US is likely to be the Drake R8B,
which uses a fairly different concept (triple IF with low 3rd IF to
employ high-quality LC filters, of which the thing has quite a complete
set stock). An NRD-545 is a good bit dearer still, but features IF-level
DSP.
The strong points of the '7030 are its strong-signal handling (it's not
hyper-sensitive in return), the good audio and synch detector and the
flexibility in terms of filters. (Phase noise is very low, too.)
Additionally its fairly small size makes it attractive for DXpedition
use. As for minuses, its operation, while quite well thought out within
its limits, is nothing for you if you prefer "one button, one function"
layouts ï¿½ la JRC. You see, the best receiver can only be the best
receiver *for YOU*; it certainly doesn't hurt to try a few before
buying.

BTW, as a ham you might also be interested in various transceivers.

> Is there perhaps a website that has a fairly independent review of these
> radios, and makes comparisons?

In terms of strong signal handling and phase noise, this might be
helpful:
http://www.sherweng.com/table.html

Stephan

PS: What about your antenna situation? I had to find out the hard way
that the best receiver is of limited use without a good antenna.
Actually a good antenna and listening experience tend to be more
important in catching good DX than the receiver itself. (Primitive
example: A $150 portable can beat a $1000 tabletop hands down in AMBCB
reception just because of its easily rotatable built-in ferrit rod when
the tabletop uses a fixed and possibly even rather omnidirectional wire
antenna which as an E-field antenna would also catch more local noise.
Add a tunable AM loop to the game, and things start looking entirely
different.)

When you get to the range of the 7030+ or the Drake R8b or the JRC NRD 545d, it's mostly a case of personal preference.

I owned one of the original Drake R8's and I liked it better than an out of the box 7030+. Add some great filters and the 7030+ has an edge.

While some swear by the JRC's I've seen way too many comments about the audio quality being poor. That's a big issue for me.

The only radio I've had that I like better than the 7030+ is a Harris RF-550. It's an older military radio with nothing to speak of in the way of convenience features, but it's got the nicest build quality I've ever seen, and if there's a signal to be found, the Harris seems to make it enjoyable to listen to. They generally sell for considerably less than a new 7030+.

Other respected military radios include models by Watkins Johnson and Racal. Personally, I like the older digital WJ's better than the newer ones. I had a Racal 6790/gm and while it was a good radio, it just didn't seem to have an advantage over anything else I was using.

On tube era radios, the Collins designed R-390 and R-388 are quite good.

Yes! The FM antenna connector is a 75ohm F style and
the AM antenna connector is a pair of wire clips(?) like
you would see on speaker cabinets.

B.A. web site has a link for the Recepter with all the details.
You can purchase a Recepter at Best Buy which has a generous
return policy. So give one a spin.

UPS is the worst offender. They take payment for shipping from the sender. That's normal. When they deliver the the package in Canada, they charge again. I once paid around forty dollars shipping for an eBay oscilloscope 'win'. When the package got here, it was ANOTHER seventy dollars. Some bargain. If it wasn't a Tektronix 7904 I would have told them to keep it (in an unsunlit place).

United Parcel Service turn into thieves as soon as they cross the border. I won't buy anything shipped via UPS any more.

The postal services of both countries have been pretty good, though. They have a postal money order agreement between them, with low charges. You can cash the order in most postal outlets. Convenient. You have to tell the postal person that it's an international money order, going to the US or Canada to get the right form. If you don't tell them, you will get the wrong form and the thing is uncashable.

http://www.freerepublic.com/focus/f-news/1370976/posts

I like Michael's comments in that last one - if they were only true.
"...I want to spend the rest of my life with her. I'm going to do that."

Notice he did NOT SAY he wanted to spend the rest of HER life with her, but he wanted to spend the rest of HIS life with her. I surely hope someone helps him do just that! He should die when she does. Better, He should die BEFORE she does so her parents become guardians and save her life! I pray it will happen before, at the same time, or VERY soon thereafter! There's rumor that her father is a bit of a coward and doesn't have the guts to do what it takes to save his daughter's life! Perhaps, Michael is in hiding and he can't be found! :-(He'll come out, after she's dead.

Rumor also has it that the devils who are starving her will see that she dies on Easter Sunday. Will they make it at sunrise? Not sure the significance, but it'll come out.

Hmmm. I must have lucked out. I have one of the SMC models and it works great.

By the way, if you or anyone else knows how to deduce the age of a Lowe receiver from its serial number, please let me know.

Thanks,

Steve

Wine is alright, but not water. The insanity is spreading.
A minuscule piece of bread. What an insult to everything religious. Offering what is said to be the Body of Christ via trans-substantiation to someone being willfully starved to death must surely be the work of the Devil.

They should storm the hospice and drag her out of there. Any number of REAL doctors would gladly stick the feeding tube back in.

Deduce the age of a Lowe radio by it's serial number? There are some World War Two Jeeps (my World War Two Willys Jeep was built in the Springtime of 1942) that can NOT be deduced the age of by their serial numbers because some parts were never kept track of.If some of those Lowe radios (and other things too) were hurrily built in such a fashion,no way in hell to deduce the age of them via their serial numbers.

the Ten-Tec RX-340 is one of the best all around receivers available at a price of $4000

if you only do SWL listening, the Sat800 is the BEST FOR THE MONEY

if you do a lot of utility listening, then the 800 is a bad choice since it has only a 2.3 as its narrowest filter,

anyone who gives advice without asking what you will do with it and what antenna you can put up and what your budget is can NOT give you good advice.

Having owned most of the premium receivers, I can say that there isn't a lot of difference once you spend a few thousand.

The R8B has the most mellow audio and best synchronous detector imho. The R-75 isn't bad, better with the Kiwa mods. The 525, 535 and 545 JRC receivers are ok too. I have sold off just about all of my tube stuff and have been using a RX-340 for the last 1-1/2 months. Great receiver! I think I'll keep it and forget about the search for the "Holy Grail" of receivers.

Source record: 14266

Dear Daniel,

I have both a Satellit 800 and an AOR 7030 Plus (which I had custom-made by the factory when I ordered it).

I have been a short wave listener for well over forty years. In my opinion, the AOR AR7030 Plus is the finest short wave receiver being made today. If you know precisely what you want, you can have the factory make up a unit exactly to your requirements. That is what I did. Naturally, each person's receiver would then be different from someone else's as no two people are going to want exactly the same thing.

Should you just wish to buy a "stock" AR7030 Plus, you can always have it suitably modified "after the fact" as you gain experience with it both by the factory or by "third-party" companies, such as Kiwa. The radio can also always be "upgraded" to current standards. (This, incidentally, seems to be a "British-thing." Have you ever heard of the Linn Sondek LP-12 turntable - made in Scotland, not quite "British," but close? Even if you have the earliest model - made in 1972 - you can have it upgraded so that it is no different than one that just came off the line. The same thing applies to the AR7030.) I believe that this is spectacularly good engineering. (For example, you cannot upgrade a Drake R8 to an R8B, nor can you really "upgrade" any other receiver of which I am aware to the same standards as a new sample.)

The AR7030 Plus can be operated from its front panel, via its remote control, or totally by computer (the free RxWings program is absolutely superb).

The build quality, the reception quality, the operation flexibility of the AR7030 Plus are, again in my opinion, matched by no other receiver currently being made.

That said, when used with the same antenna, I estimate that the Grundig Satellit 800 gives about 95% of the performance of the AOR at about one-fourth the price. I hope you ordered your '800 from a company which offers to bench-test your particular unit prior to shipment because, as is well-known, the Grundig's build-quality is not the best nor is its construction consistency. When and if you do get a good one, you will have a very good radio which is extremely cost-effective.

If your radio is one of the ones which is made properly, you will have a short wave radio about which you need not "apologize" to anyone! (I must state, however, that I do not believe the Satellit will last anywhere nearly as long as an AR7030 will and I have major questions

about the Satellit's "repairability" in the future - Drake seems to be exiting the short wave field.)

Make certain that you do use a suitable antenna with whatever radio you buy. It is absolutely true that the antenna is more important than the receiver. The Grundig Satellit 800 can handle any fine antenna as can the AR7030. I personally use a Wellbrook ALA 330S with my AR7030 and an AOR WL500 Window Loop antenna with my Satellit 800. (Covenants prohibit outdoor antennas here, except for TV Satellite dishes -- do you think $$$ had anything to do with that decision of our HOA?)

I wish you the very best of luck with whichever receiver you buy.

Joe

I have a Grundig Satellit 800 coming my way, and some of my fellow ham radio
friends are trying to convince me that I've made some kind of mistake.

The AOR 7030 is darnedably expensive, but I did have a question as to performance characteristics and enhancements. Is there a shortwave radio
superior to the AOR 7030? Just for curiositie's sake, is there such a radio
that IS more superior, if money were no object? Or is there one superior in
quality that is actually less expensive?

Is there perhaps a website that has a fairly independent review of these
radios, and makes comparisons?

Any help greatly appreciated.

(I do know of radio netherlands, and universal radio.)

73, WW6DJM

Daniel

It is just a single tuned circuit, where I am tuning the primary of the loopstick, with the secondary winding driving the amplifier.
With the MMIC I use as an RF amplifier, overload isn't an issue. The RFMD RF2044 can put out +17dBm of linear power into 50 ohms.....1dB compression doesn't occur until +18.5dBm. It looks like this device is discontinued, so I need to find another one. I've got around 400 of the 2044s on hand, but for a production run, that isn't quite enough.
For the input stage, I am going to switch to a differential JFET design. This should help in achieving deep nulls with the antenna. Although I have been building different iterations of these antennas, the balanced design is new for me.....I do see advantages with this approach, so I will be going in this direction for a marketable item.

As I suspect:

"that is normal shipping it includes a messenger fee to take it to post
office"

Man, the ICF-7600GR must way 50 lbs for that to be ordinary shipping, even
with an extra courier thrown in.

A severe government clampdown can happen anywhere, anytime. Except for the farm situation, which was specific to Zimbabwe, the tactics pretty much remain the same everywhere you go-silencing of independent media, killing or exiling of critics, the only opinions allowed are those approved by the government. In Nepal in January the king suddenly, in one fell swoop, took away all the freedoms granted over a 15 year time span, imposed direct rule by himself, and banned all criticism of the action or of the government (meaning himself). Independent radio stations found themselves with soldiers posted in their studios, making sure that they followed the new rules (previously they had been vocal critics of the government). Phone lines and internet access to the outside world were cut off. FM relays of foreign news services like the BBC were shut down. The king said he did this to cope with an insurgency. It came as quite a shock to the Nepalis. If it can happen in Nepal, it can happen anywhere, including America. All that's needed is a pretext, like maybe another 9-11 level terrorist attack in America, and the president turns into the Great Leader.

I should note that these aren't great times to listen for this station
in North America because it's the middle of the day. If Ace or anybody
else wants to try, the best chances would probably be 15145 and then the
11 Mhz area frequencies.

This is the Anti Jamming Antenna invented in the 80s to get around
Soviet jamming of Radio Free Europe and other Western SW stations beamed
to the USSR. I'm guessing it could be plugged into an external jack of
any portable that has one, or even attached to a whip. Unfortunately
there isn't much in the way of internet access in Zimbabwe, so most
people can't get the plans from the net, but stuff like this has a way
of circulating within even the most strict dictatorships.

The 550 is a nice looking radio, but the strong point is when you use it
in sideband mode with afc and coherent AGC.

Mine had a tuning knob that felt like I was grinding up sand. I've
not read a single comment about a genuine Lowe that had anything
negative to say about the knob "feel." Also, there was the debacle of
Lowe having to rebuild/refurb SMC's because SMC plainly botched the
job.

Mine also drifted for about an hour after turning it on, something
else I've not heard anyone say about a "genuine Lowe."

You do need to check on shipping on ebay.

Two years ago someone had a box of each color of ink for my printer for
$75 "Buy it now" - more than an 85% discount. Fortunately, I noticed he

wanted $600 for shipping before it was too late.

Sure did Brian. The one listed above, 2 separate channels, each one has
an antenna input and 4 receiver outputs plus each channel has a test
output. All bnc's except the antenna inputs which are N type.

Les

His brain is not functioning properly. Call it Persistent Idiotic
Stupidity State, or PISS. Symptoms can include posting about satellite
"radio" to a shortwave radio group. Other symptoms can include slavishly
following SW kooks, incessant off topic bashing of a whole country, or
repeated name calling. Other sufferers are Al Patrick, Li Changchun, and
dxAce (respectively).

In the first years that she was in this horrifying state, her husband Michael did all he could to find treatment, going from hospital to hospital trying new therapies. Terri was sent to California to have experimental platinum electrodes implanted to get her brain going again. Michael slept next to her for five weeks. At the time he and Terri's parents were united in doing all they could for what was left of his wife.

Eventually the husband acquiesced to near-universal medical opinion and came to terms with the fact that his wife would never revive. He said that when she was cognisant she had once told him that she did not want to be kept alive artificially for an indefinite period of time.

I know where there is an old rusty John Deer farm tractor for sale.The guy has a used car lot and he owns the Black Angus meat market next door to his used car lot on Robinson Road.He said the engine and transmission in his old farm tractor has been completely overhauled but it doesn't look like it to me.

4611. Liberty Net WNFAM? i.e. Mr. Worldly (or wordy)

Newsgroup: rec.radio.shortwave
Date: 2005-03-27 04:02:26 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns9625EA61FFE79TheDoctorisin@216.168.3.44>
Source record: 14297

Ah, the jamming has started, I am so glad that the U.S. has an FCC that enforces the laws that it writes, and is populated with mature people that can actually tolerate the opposing views of others. (oh, excuse this paragraph, I must have fallen asleep and was dreaming).

The Liberty Net, largely dominated by like thinking individuals (sic), indeed has it's token counterpoint. W9FAM or, in the vernacular, Vernon J Kaspar

Visit http://www.qrz.com/ and insert W9FAM in the "Get Callsign" box at the top of the page. You will be directed to a web page discussing his License status, and can see a picture of Vern.

Weekly, Vern (i.e. Mr. Worldly) tells tales of knowing the Saudis, having visited every country that ends in &#65533;stan (Pakistan, etc.), Russia, India, and just about everywhere, and he professes to be fluent in many languages. I don't understand how he can visit so many countries, as he is very very old, corpulent, and he is on the radio every week, yet he stills claims to have gone to this place or that in Europe or the Middle East even last year.

Vern is proud that the U.S. is becoming an Imperialistic Country, as he says that it is a fait accompli, and that the U.S. citizens should willingly accept the demise of their young fighting these wars of conquest. (I believe that Bush refers to these wars as Democratizing) .

Vern is basically the steadfast opponent to the views of the 'net, he even sees the virtue in killing Terry Schiavo, as Vern's wife of 55 years collapsed of this or that, and he wouldn't want her to suffer.

Does anyone know anything about Vern? The internet searches that I have made seem to indicate that he, or his family, own a commercial broadcast station or two. The enigma to me is that, even with the affiliation with a small commercial broadcast station, he seems to travel more then most Network News people.

My wife thinks that he is delusional, sometimes I believe that she is correct. Any substantive information on this individual would be appreciated. (just historical items, and anything verifying his statements of global travel).

http://www.warpradio.com/single.asp?id=3298 (Mentions Vernon, but the link no longer seems maintained)

http://www.fcc.gov/eb/Orders/2004/DA-04-711A1.html Mentions Vern Kaspar.

http://www.kwre.com/privacy_policy.html Kaspar Broadcasting.

http://www.wilo.us/EEO.htm Mentions 2 stations owned by Kaspar Broadcasting.

There's more��

Nobody knows what the purpose of the signal is so how can you make the
claim? Best to wait and see what's going on before making any claims.

Stock, bah humbug. Start your OWN business and employ dozens of people
who work at making YOU rich! Then invest in real estate and watch the
rent money roll in from people who are too clueless to buy/own a house.
If Sam Walton could make $100 billion by breaking every labor law in the
book, and Bill Gates could make $50 billion by writing buggy software,
imagine how much YOU could make by starting a business that makes
something that people actually WANT to buy! It's called capitalism, and
when it works, it kicks commie ass. And it doesn't take a genius to make
a fortune, either. Just build a business using ONE original idea, and
the rest falls into place if you know how to work the system. I know
that a single original idea is beyond the thinking capabilities of most
people, which is why 90% of the world's wealth is in 10% of the world's
hands. Why buy stock when you can start a company that ISSUES it?

You seem to have a bit of a problem understanding what *real* radio is, 'tard
boy.

Wow! The case actually shines. The unit looks brand spanking new.

I wonder if it is as nice on the inside as it is on the outside?

Over $3K though ouch!

Flanders signed off the air as of today. You will have to try for
another frequency than 9590 and I don't mean satellite. Satellite
reception is for the pointy tin foil hat crowd in RRS.

Yeah, and what happens when BAD people die? And how do you know teri was good? And what's your definition of good, by the way? Or did you even bother to give this the slightest bit of thought before you fired it off?

"If it can happen in Nepal, it can happen anywhere, including America. "

No, nope, no way. You are clearly delusional and I don't mean this to be insulting. You really do need help if you think this way. I suggest you get a psychological evaluation. This is called paranoia and you should address it. Some recreational drugs will make you paranoid or you could have an chemical imbalance problem or you just haven't dealt with issues in your life. You better find the reason and address it because this sort of thing does not get better with time.

Are you really so brain dead that you actually believe there is any
chance of him going to jail?? He was awarded 300K for his loss of
"consortium" and 700K was put into a fund for her care. It's all gone.
It went for her care, even most of his share, and besides that, the
statute of limitations has been up for about 5 years, so he would be
free and clear, even if the nonsense on the links below was true.

> "...I want to spend the rest of my life with her. I'm going to do that."

There are a couple of things about this that I would need to know about
this. Such as when did he say it. I'm guessing it was early on, when he
still had some slight hope for her recovery. He finally faced reality,

she's a body without a brain, in all the important ways..dead.

The marriage vow, "In sickness and in health" is one thing, but if you want to be accurate, in this instance it would have to be "In sickness and in brain death". I see no problem moving on, as far as dating, etc goes when what used to be your wife is nothing more than a "meat shell". If he hadn't cared about her wishes, he would have just walked away. He's trying to do what she would have wanted. PEOPLE WITHOUT ANY AGENDA HEARD HER SAY IT, that's why the courts keep going against the parents.

I would hope someone would do the same for me, if I was in her situation. The only thing I disagree with is how she is dying. I would want to be euthanized. But since she's not aware, it doesn't matter, as she feels no pain. You have to have brain waves to feel pain, and if you have read reports by doctors that have actually seen her in person, she doesn't react to even very intense pain. If she did, we wouldn't be bombarded with this, as she wouldn't be brain dead...

Local police arrested someone trying to hire a hitman to kill him.
Police in Kentucky arrested a wacko who tried to rob a gun shop so he
could come to Florida to kill him. I guess you advocate his murder as
well?

It IS the nicest looking one that I have ever seen by far, and I've seen
a bunch. My friend's dad had three. One was restored, one was a decent
original, and the third worked, but looked like crap, reportedly rescued
off a pallet of them sitting outside Wright Patterson AFB under a tarp.

I would believe it....

I wonder if they would sell the design to a small company to update
and sell under a different name? I was involved in a number of receiver
redesigns due to obsolete parts when while I worked at Microdyne.

The SAT 800 is well worth the money if you get a good one. If you have
problems with your new 800 you can send it to Drake and they will update it.
Mine works great. It may not be the best but it may be the best for the
money.

A brief pop in to say hi.

Haven't really been in the hobby much, due to other more
in-the-real-world kinds of demands, but that Drake R8B sure looks
tempting to hook up... and I have all this copper wire in a drawer just
sitting there... :)

Hope all is well.

For those of you noting with distress the irrational and emotionalistic
tenor of public discourse, where reason and logic count for nothing;
all that matters is whether you're playing for "us" or for "them".

These irrational periods of superheated noise eventually burn
themselves out. Hang in there.

Talk to ya all later.

Quoth m II <None@this.time> in news:f0n1e.77791$ZO2.77516@edtnps84:

> There have been ten people arrested for trying to bring water in
> for the soon to be murder victim.

That's correct. Had they actually poured water down Terri Schavo's
throat, it would have gone into her lungs, and they would have
murdered her by drwoning.

By arresting those ten people, the police saved Terri Schiavo's life,
such as it is.

George Bush's War of Choice on Iraq is a totally unnecessary war.
Every life lost, every limb lost, every disfigurement, every
disability caused there is more blood on George W. Bush's hands,
and on the hands of everyone who votes for George W. Bush.

4676. More on Shortwave Receivers... DX'ing, etc.

Newsgroup: rec.radio.shortwave
Date: 2005-03-27 13:01:49 UTC
From: "Daniel J. Morlan" <dmorlanderschpammtrapp@sbcglobal.net>
Message-ID: <19y1e.11729$ZB6.2153@newssvr19.news.prodigy.com>
Source record: 14214

I enjoy shortwave very much when I have the time, and living in Indianapolis now, I can receive a LOT more stations on just the whip antenna of my BayGen. I sold my Sangean ATS-909 and a few other radios that I didn't use so much so that I could buy the Satellit 800. I will miss the compact nature of the 909, but I'm bound to buy the Eton E1 when it comes out to fulfill THOSE wants, but I eventually want to get to some "serious DX'ing".

I wanted the Satellit 800 because I thought if I put a good enough antenna on it, I'd have one heckuva "tabletop" shortwave radio that could catch some good AM signal as well. Now that I'll be getting this Satellit 800 within a day or two, my next mission is getting the "best" antenna I can for it.

I am a ham, but not as knowledgeable as I need to be as far as antennas go, and technical expertise. I'm mostly versed on the etiquette, and code of ham radio. I don't transmit at all if I can't transmit clearly enough to be read well, etc... (I digress).

For now, I'd like to "soup up" my Satellit 800, and get a really good antenna for it. (The best for the money, in other words.) And while I could probably find this information online (which I will do) I always appreciate, and have appreciated the feedback I got from you folks in times past. I look back at my archive questions, and I laugh my head off. (Hysterically.)

Thanks very much, guys, for your suggestions, and experience in this regard. I'm made more radio savvy with every question answered, and I'll find myself not having to make the mistakes often made by those who have to do everything themselves. (I'm a bit nervous that I sold my 909. I loved that radio, but wanted something better performance-wise.) I'll buy one back on eBay if I end up disappointed. That 909 was a beautiful radio.

73's, WW6DJM

Daniel

(P.S. For those of you who might be a little miffed about my having a vanity call being so inexperienced. Understand that it's my reflection of being proud ,and excited about ham radio. Not an ego trip. When I ask questions, it's because I want to try and be the best I can be. My callsign has actually rubbed a few people the wrong way, and I can never fully understand why.)

Best regards,

Dan

Freedom is a nice but not available to everyone. Even in America, there is no individual freedom to live when the judges want a person to die - http://www.cnn.com/2005/LAW/03/26/schiavo/index.html. What right do the judges have to solely decide whether a person lives or die when a person has not commited any crime? This is something people outside America cannot understand.

In any event, America's real enemy is not China, or even India. For at least 3000 years, these 2 people had been traders, capitalists, and politicians, but never serious military aggressors. Even if they are to exceed America economically, i doubt they are interested in military dominance beyond self-protection.

I'm no history expert, but can list some of the people that have been aggressors in history.

1. Mongolians (Genghis)
2. Huns
3. Greeks (Alexander)
4. Vikings
5. Celts
6. British (India, Burma, South East Asia, Opium War)
7. Germans (WWII, WWI)
8. Japanese (WWII, Taiwan, Korea occupation, Boxer uprising, China)
9. Italians (WWII and Roman Empire)

Cuhulin,

Maybe someone needs to document whether an evil person loses or gains
weight. It could be an interesting study.

Where the near future is concerned, I hope you enjoy the Satellit 800. Where the more distant future is concerned, if you really want to do some "serious DXing", then I encourage you to consider something other than the E1. In particular, you need to consider a tabletop receiver, as the performance of the E1 is unlikely to be significantly better than that of the Satellit 800.

I'm *assuming* that your primary interest is broadcast listening and broadcast DXing. In that case, if you can afford it, spring for a new AOR 7030+.

If you can't afford anything in the price range of a new 7030+, but have an aversion to buying used equipment, then consider the Palstar R30C or R30CC. It's very small and doesn't have a lot of bells and whistles, but it's a significant step up from the Satellit 800.

If you don't mind buying used equipment, then you have many more options. I suggest you consider a used Drake R8, R8A or R8B. One of these would be a good choice if you have a secondary interest in utilities, CW, and so on.

On the other hand, if the Eton "spin machine" really has its hooks in you and you're determined to buy an E1, at least wait a few years until they have the bugs ironed out of it. You shouldn't spend $500 of your hard-earned money so that you can be one of the E1's beta testers.

As for an antenna for use with the S800, I suggest that you buy a length of coax, an I.C.E. model 180 beverage/longwire matching transfomer, a ground rod, and enough copper wire so that you can not

only erect a sizeable antenna but experiment with a number of different antenna designs to see what works best in your circumstances. This will be great fun, and it will give you more than enough antenna for the 800, which will begin to overload anyway if the antenna gets too large (I found this out myself, the hard way). My guess is you'll get excellent results with a random wire antenna, but half the fun is experimenting.

Later, when you have a 7030+, a Drake or whatever you end up with, you can consider building a much larger antenna. At this point it might also make sense to consider something like a Wellbrook loop, especially if (1) you don't mind spending a few hundred bucks on an antenna and (2) you don't have the space in which to erect a large wire antenna.

Whatever you decide to do, I hope it works out well for you. Keep us posted!

Steve

Space is something I don't have, unfortunately. I have a 900 square foot house, and a small yard. It's all mine, but it's pretty small. (No doubt I can still arrange some kind of dipole.) GROUNDING is something I've been lax with, and will be more dilligent with this time 'round. My shortwave antennas have typically been speaker wire that gets thumb tacked around the corners of the house, or along the edge of the house outside. A good ground will probably improve my reception appreciably, but Mrs. Won't like me having my radio in the living room all the time, and I'll have to go upstairs once in awhile to listen.

As for the E1, I hadn't even planned on buying it this year. $500.00 for a tiny radio that does what the 909 does, but has XM isn't my idea of a good investment, but I *DO* like the panel a lot.

I saw a nice little portable shortwave receiver that seemed to have "features" I found very good. I believe it was called a Degen 1103? (or 1130? GOsh, I can't remember now) but I liked seeing the panel lit up, as well as the buttons. They can be bought comparatively cheap as well, but... I'm going to enjoy playing with my Grundig for quite a long time, and I'll know when it's time to get something new. It's good to know that the same old antenna plans are always a good way to go. I WAS thinking mainly of some sort of erectable pole or stationary single antenna. (Something for the 80MPH severe thunderstorms to knock out.)

I think what I will do is just run a wire along the perimeter of my house outside, hook it up to a 3-4 foot ground (the ground never gets dry here in Indianapolis... NEVER EVER) and run a little bit of wire through the winder where I'll hook it up with alligator clips to the whip.

(Lemme guess. THAT'S a bad plan...) <someone's gonna tell me that, and I'll feel like a flaming arse...

> Local police arrested someone trying to hire a hitman to kill him.
> Police in Kentucky arrested a wacko who tried to rob a gun shop so he
> could come to Florida to kill him. I guess you advocate his murder as
> well?

Michael,

I advocate his "killing" but not his "murder" and there is a VAST DIFFERENCE.

Snakes make "laws" which allow themselves to "get away" with all kinds of things. Statute of limitations is but one such law. "You can't prosecute me now, that was x number of years ago! HeHeHe!"

Snakes also change the meaning of words. "Gay" is a good example of this. However, "murder" is another of their favorites. Some people cite the ten commandments as saying "Thou shalt not kill" which it DOES NOT. It says, "Thou shalt not murder."

Snakes like to call killing murder and murder killing, but there is a vast difference. Deuteronomy 19 and Joshua 20 have much to say about the avenger of blood. You probably should read it. Also, Genesis 9:6 tells us, "Whoso sheddeth manï¿½s blood, by man shall his blood be shed: for in the image of God made he man." I'd much rather believe God's word than that of some whiskey guzzling, drunk driving, whore hopping, and probably murdering, "law maker" who wouldn't know Truth if it slapped him in the face. ...And that only partially describes just one of our "law makers".

Someone has described congress like this - usually under a heading such as "Would You Work For A Company Like This?":

29 have been accused of spousal abuse
7 have been arrested for fraud
19 have been accused of writing bad checks
117 have bankrupted at least two businesses
3 have been arrested for assault
71 cannot get a credit card due to bad credit
14 have been arrested on drug-related charges
8 have been arrested for shoplifting
21 are current defendants in lawsuits
In 1998 alone, 84 were stopped for drunk driving

God's word tells us something about the book of life. A few of those references are copied below. Re stands for the Book of Revelation which

is the last book in the Bible. All references come from the King James Version, KJV, also known as the Authorized Version, AV.

Re 17:8 The beast that thou sawest was, and is not; and shall ascend out of the bottomless pit, and go into perdition: and they that dwell on the earth shall wonder, whose names were not written in the book of life from the foundation of the world, when they behold the beast that was, and is not, and yet is.

Re 20:12 And I saw the dead, small and great, stand before God; and the books were opened: and another book was opened, which is the book of life: and the dead were judged out of those things which were written in the books, according to their works.

Re 20:15 And whosoever was not found written in the book of life was cast into the lake of fire.

Re 21:27 And there shall in no wise enter into it any thing that defileth, neither whatsoever worketh abomination, or maketh a lie: but they which are written in the Lambï¿½s book of life.

Re 22:19 And if any man shall take away from the words of the book of this prophecy, God shall take away his part out of the book of life, and out of the holy city, and from the things which are written in this book.

I'd say Michael Schiavo along with most of our law makers and judges will NOT be found in the Book of Life! All who are not WILL be "taken care" of by the Judge of all the earth! If the internet is still around, which I doubt, I'm sure many of this group - r.r.s. - would be pointing a finger at God Almighty and telling Him that he's some kind of kook, wacho, low-life, good-for-nothing murderer. But that's future so I'm sure most do not worry about it today! :-)

>
JD, I'll make one more "uninformed" statement, just so you know where I'm coming from, then I'll butt out. I have no desire to butt heads with you just because we disagree.

Michael Schiavo is Terri's legal guardian. He maintains that he is following her decision which, though not in writing, is her legal right. The Schindler family cannot give up on Terri (to their credit!), even though the vast preponderance of medical opinion is that she is "brain dead". Her cerebral cortex is gone, replaced by spinal fluid. Brain scans showed no "mental" activity.

In Seven years of legal examination at every state and federal level, not one judge has seen sufficient evidencen to overturn Judge Greer's ruling. There is simply no legal reason to strip Michael Schiavo of his guardianship rights or to believe that Terri is conscious or can be rehabilitated. Judge Greer is simply following state law (at great peril to his personal safety from those who honor the "sanctity of human life").

The worse part of the whole affair is the scandalous accusations thrown about by those who would remove Michael from the picture by demonizing him and prop up Terri until some miracle comes around. Also, lost in the argument is the fact that every day, all over the country, families are facing the same difficult decision about terminating support for loved ones in similar conditions, except in Texas, where then Gov. George W. Bush signed a law that allows hospitals to make these decisions regardless of the families' (or patients') wishes.

Respectfully,

Greg

I've just about had enough of this Shiavo krap!

People die like this every single day for many different reasons. Ask
Hospice!
The people who are obscene are her parents who insist on broadcasting their
denial
that they are blaming everyone else for her demise. Death is life and
EVERYONE will die.
There is no one to blame for her vegetable state of "coma" for the last 15
YEARS!

This is not a case of politics. The parents simply wish to make it so -
obscene.
The law is crystal clear in this situation. For any judge or politician to
usurp the law
would be obscene to say the least. Dozens of judges have consistently
denied her
parents over many years. Including judges from the obscene Clintoon Era.

If you wish to argue a case against her husband then why not argue more
fervently
against obscene murderers such as O.J. Simpson?????

I have a conspiracy theory. This case is trying to usurp the marriage law
in that
the husband is the legal next of kin. Attempts are being made to destroy
the
institution of marriage by chopping away at every angle the
leftists-socialist commies
can possibly get away with. It is related to the same sex marriage
controversy.
That is what I would call - OBSCENE!

There are various maildrops and some have their own addresses. Possibly try a
Google on the station name, and sometimes you can find their address.

Many though of course indicate a maildrop during their broadcast.

In Canada, they are teamed with Rogers Wireless for cell phones who, outside of Ontario, have a limited network. They sell more computers, gadgets and stereos than anything else here. They also still have an excellent parts department.

A judge in Texas can say whatever he/she wants, but has no jurisdiction in Canada of any kind. This is likely to start a negotiation and a protracted legal process versus anything else. Given that this is the largest electronics retailer in Canada, I'm sure the government would also express an interest if asked. An associate store in Canada could and should say, "sue me", and the settlement in this country would have to show that there were actual damages which would take some other company proving their profits were hurt. And even if, that may not persuade a court here,if the suing company looks predatory in any way. Similar settlements have also taken into account the prior use of the trademark and the damage to the existing business. A Canadian court is likely to suggest a lengthy time frame for the name change. And no or very limited exchange of money between the parties. And this is after mandatory mediation. The laws are different here. It took more than 5 years for West Edmonton Mall to agree to stop calling their amusement park "Fantasy Land" after the US company Disney got worried about it. I'm not sure if furniture giant The Brick has settled with Brick's Fine Furniture of Winnipeg 15 years after that started. I don't remember anyone changing their business name from Olympic when the Olympics have been here, despite the IOC saying they had to.

Yea I been searching. I just got a couple I need addresses for. I was just
trying to add another resorce if there was one.
Thanks Ace.

Yes, one of many common misquotes of the Bible, like "Money is the
root of all evil" while conveniently forgetting, "The love of" in front
of it.

> Snakes like to call killing murder and murder killing, but there is a
> vast difference. Deuteronomy 19 and Joshua 20 have much to say about
> the avenger of blood. You probably should read it.

I have read the bible cover to cover a number of times, starting the
night I was saved. I have the HTML BIBLE http://www.htmlbible.com/ on my
computer and a button on the toolbar on my browser. Back in the C64 and
C128 days I found a highly compressed, upper case only copy of the King
James Bible. I wrote a program to decompress it, convert it to lower
case and read the text another five times as I proof read it against my
very worn copy of the Bible.

I worked at Ch 55 WACX Christian TV station in Orlando as a broadcast
engineer and was engineer of record for the construction of WRMX in
Destin around 1990. I spend what time I can at my church, my health
permitting.

I don't feel that its doing anyone any good to keep her on the
feeding tube other than her parents. There is a point where the vessel

is empty and needs to be put to rest for everyone's sake. I'm old and 100% disabled. There is no way I would want to me a burden on my family and friends for that many years.

Depends on your pocket book. :-) Radio Shack has AM/MW external antenna for about $30 or so. http://www.ccrane.com/ has a selection of them. I think you can find a pretty good somewhere in your price range.

4708. OT-Battery question (NiMH)

Newsgroup: rec.radio.shortwave
Date: 2005-03-27 17:30:00 UTC
From: wavetrapper <k3pi@arrl.net>
Message-ID: <1111944599.992759.107960@z14g2000cwz.googlegroups.com>
Source record: 14246

The NiMH rechargeables I have been using were getting weaker and weaker - so I bought a several new ones.

My question is: in the long run, am I better off to -

(A) "rotate" the new batteries (say, use a different pair each week) or

(B) just keep recharging the same pair until they ultimately fail and then replace it with another pair. If this is the way to go, am I okay just having the new "out of service" batteries just sitting on the shelf for quite a while.

or is the answer (C) - six of one, half dozen of the other!

thanks

I agree 100% with you Mike.

15 years is **far too long** for anyone to let one's daughter
live with a semi-functional brain stem and a cerebral cortex
that has become a non-symbiotic mass of eggplant fazool...

Schiavo's parents are truly mentally ill for letting her remain
in that condition, a useless body that has it's autonomic life
support system 100% dependent upon forced feeding of liquid
nutrient supplements, but WITHOUT any mind or functional
state of conciseness. (an ADULT FETUS to be most accurate)

Is it any suprise that these right wing SCREWBALLS in both
the church and the Congress latched onto these two PATHETIC
PARENTS for the sole purpose of using their own daughter (!)
as a political football.....????

TRULY SICK. (period)

Source record: 14099

Many of those stations on the list are run by one operator, others are no longer on the air.

QSLing pirates is much different than QSLing the few remaining BCB stations... although pirate QSLS are so much more interesting!

ALWAYS include $1 or a few units of first class postage if you snail mail, very few will respond if you lack the postage. Many pirates are sending EQSLS these days so don't be disapointed if you get one via e-mail. Pirate radio today is different than it was in the 1980's and early 90's.

4712. AFN conundrum

Newsgroup: rec.radio.shortwave
Date: 2005-03-27 17:49:22 UTC
From: John Plimmer <plimmer@nospamtelkomsa.net>
Message-ID: <d26rjmom1@ctb-nnrp2.saix.net>
Source record: 14248

I always thought that AFN had only one programming stream.
But listening to the following I found two different streams on AFN on March 27th
5765 AFN Guam (8,700 miles from this QTH) @ 1630 zulu was programming country & western music
10320 AFN Pearl Harbour (11,500 miles from this QTH) @ 1630 zulu was programming some sort of political talk
At 1700 zulu they both ran the same NX

Any comment?

They used to have a sort of a turn table thingy mounted in the floor at Sammys On The Island and that completly naked blonde gal would stand on that turn table as if she was saying,,,, Look at me! I got bored after a while and I bought a baggy of Fritos corn chips and a Dr.Pepper and I went on up the road toward Panama City Beach.Before I got to Panama City Beach,I saw an antique flea market.I wasen't bored anymore.

That might be an improvement over your current setup. However, it sure would be nice to get the wire *away* from the house and away from all its accompanying sources of RFI. This is likely to result in much quieter reception, especially if you use a matching transformer to mate the antenna to a length of coax, which would then run into your house and to your receiver.

Of course, this sort of arrangement will require you to find a *stealthy* way to run a wire along (at least) one side of your property, but that's not so difficult. You could conceivably use magnet wire, which would practically be invisible even when elevated fairly high into the air. Mind you, very thin magnet wire is definitely going to *break* every now and then; but, once you have everything else in place, it might only take a few minutes to run outside and put another length of magnet wire in place.

It might also be possible to find some stronger, stranded wire with an insulation that will make it difficult to see. Many possibilities here.

If none of these ideas thrill you, then maybe it really is time to think about springing for an antenna specially designed for people who have space limitations. I use a Wellbrook 330S and am very happy with it. The downside to the Wellbrook is its cost: around £169.00 and £30 for shipping. Also, if you plan to use it on MW, you'll want to spring for a rotor as well, as the Wellbrook is very directional on MW.

If the Wellbrook costs too much, there are alternatives. Although I have no experience with them, several people have told me they've had excellent results with the RF Systems MTA antenna, which is a passive, vertical antenna. Like the Wellbrook, it's supposed to be a very quiet

antenna. Universal Radio carries it, and it's less expensive than the Wellbrook ($199.95 at the moment).

My experience is that rechargables can recycle max of 100 times.. =
2yrs or so..
you can be completely compulsive, labelling purchase date on each
battery, marking down discharge time on a spread sheet for each cell
etc..
- or else
price 100 AA's at a huge discount store, vs 6 rechargeables & all the
recharging equipment..

- Then add in the " Hassle Factor"

and there's your answer...

I spent all my time in Destin / Ft. Walton beach building a Christian
TV station as the engineer of record. Ch 58, WRMX was built with a RCA
TTU-25B 25 KW transmitter built in 1952. It was a fun job finding
modern replacements for parts that hadn't been made in 15 years. After
all, how many people get to build a legal station from scratch?

Fifteen years of evaluations by various doctors, and the broad
consensus is always the same: Her lower brain functions - the
ones that handle breathing, circulation, reflexive movement -
are intact. But as for everything that made Terri Schiavo,
Terri Schiavo...

There's no there, there, anymore.

And it's not coming back.

There are those to claim otherwise. There are also those who
claim the Earth is flat and cigarette smoking doesn't cause
cancer.

They seem to be in the same group.

Shortwave.

You know, I keep reading that but I heard on the radio that the law he signed included guardians, in the following order: Spouses, adult children, and then the parents. IOW if there's no spouse, the decision is up to the adult children, if there's no adult children, then the parents have their say. All of that is of course with the concurrence of a doctor. Do you have an easy to cite source at hand for any of this? I'd like to get the straight scoop. Searching for stuff on this case is getting harder and harder; one of these days, it's going to be called the blogernet instead of the internet.

I heard it on the radio, but it was MW...so we're probably not back on topic. ;)

Welcome to the rec.radio.shortwave newsgroup. This group was created late in
1989 after a suggestion by Richard Shapiro, in order for those of us who are
interested in the hobby of monitoring radio communications to have a friendly
place to exchange messages, tips, and opinions. If you are interested in this
sort of hobby, then we think that you will be at home here.

This is a set of monthly postings put together to answer some of the more
commonly asked basic questions about the hobby. There is a posting explaining
some of the basics of shortwave (HF) radio, and one covering medium wave (also
known as AM) and FM DXing. There is also one covering scanning the higher
frequencies (VHF and up) that appears in the newsgroup rec.radio.scanner. If
you find that you have other questions, either following up items mentioned
here, or other questions, please post. There are a number of people here with
varying degrees of expertise and experience who are more than willing to help.
We hope we've anticipated many of the questions the beginner will have. And
so, without further ado....

o What is rec.radio.shortwave for?

As stated above this group was created for USENETers to have a place to discuss
the radio monitoring hobby. This group is not moderated, however 'serious'
arguments and any kind of flame wars are strongly discouraged. That is not to
say that genuine disagreement and discussion of differing opinions is not
welcome. We only ask that you keep the tone friendly, and in the spirit of
international cooperation upon which the hobby is founded.

This group is intended to be a place where ANY radio monitoring topic can and
should be discussed. We are happy to hear from posters who listen to any part
of the radio or microwave spectrum, from DC to daylight. We discuss topics of
almost any kind, ranging from (but not limited to) shortwave broadcasting,
DXing small or distant shortwave stations, utility and teletype monitoring,
military eavesdropping, station schedules, QSLing sw broadcasters, spectrum
usage, equipment design and modifications, antennas, receiver reviews and
recommendations, and many more.

Despite what the newsgroup name might imply, we definitely DO NOT limit
discussions to shortwave only. Any radio-related topics are welcome.
People interested in scanning VHF frequencies may find that the
rec.radio.scanner newsgroup more accurately reflects their interests, and
people interested in pirate radio may want to check the alt.radio.pirate
newsgroup, although this group seems to be more interested in building small
FM transmitters than in hearing distant shortwave pirates.

For more in-depth answers to questions you may have, we direct your attention
to the postings entitled "Welcome to rec.radio.shortwave (Shortwave)", and
"Welcome to rec.radio.shortwave (AM/FM DXing)", depending on where your
interests lie. Scanner enthusiasts are also encouraged to read Bob Parnass'
excellent monthly FAQ postings on rec.radio.scanner.

FAQ, of course, stands for Frequently Asked Questions. It is considered
good form to read the FAQ(s) for a newsgroup before posting to ensure
that ones posting is appropriate. You can find FAQs for most newsgroups
at <ftp://rtfm.mit.edu/pub/usenet> by anonymous ftp, or on WWW at
<http://www.cis.ohio-state.edu/hypertext/faq/usenet/FAQ-List.html>. Look
under the following URL for a list of all radio-related FAQs.

<http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html>

< Snip >

Come back any time you feel like posting on topic, otherwise don't
bother.

All is not well as Drake discontinued the R8B and is not making another
receiver.

You better hang on to yours.

Radio Netherlands
The Dutch international service
The new frequencies are in effect today.

17,810 weak signal
17,660 very strong, the strongest for me.
17,735 very strong signal
15,310 very strong signal

Very strong signals for me mean that with the bookshelf speakers I can make turn the radio volume up as loud as I care to with little or no background noise. 17,810 is to weak for me to want to do that as the background static noise is to loud but it is listen-able at lower volume.

I'm adding several new curse words that some prolific Trolls in the news group are using since otherwise normal people can't seem to resist disrupting the news group by answering them. I have already kill filed the worthless Trolls but if people keep answering them I still end up seeing this crap.

Because normal posters continually respond to the Trolls the same foul threads show up every day. I'm not interested in reading arrested development type posts.

Apparently some posters think that's what I want to do, visit someplace every day to get short wave news and instead read a bunch of cursing.

Not!

The auction has since been stopped and closed.

But, you might want to read this:

R-390 folks,

This is a followup to the thread:
"Big bucks blackface 390A on the e-place"
about Item 5761820560, and is the story as I know it.

I got a call this morning from Howard Mills. He's the person I
referred to
in my post to the R-390 list:

" ... A well known restorer of "black Collins" radios did a batch of
black
R-390A panels not too long ago. I wonder if this is one from that
batch. ... "

In fact, it is. Howard shared with me some of the background on the
situation and suggested that I post the information here. This is the
story

as I know it.

About a month ago Gary Baker, W3OG, had an R-390 and sold it to the seller
of Item 5761820560, Dr. Jan C. Robbins, N0JR. Dr. Robbins wanted a black
faced radio, apparently because he had a black cabinet, so Gary took the
radio to Howard. Howard noticed the following:

1) The front panel was bent in the upper right corner.
2) The radio played well.
3) The nomenclature tag on the panel was a reproducton Collins tag of the
more common short size.
4) The PTO was a COSMOS unit, and the name tag on it had scuff marks and
scrapes.
5) The radio interior was moderately clean but by no means pristine.
6) The meters were of the type that do not have separate front covers.
7) He did not determing what the manufacturer of the radio was. He did

not
remove any modules although it appeard to him that the modules in the radio
were from various manufacturers, as is typical of many R-390A's that have
seen service and periodic depot maintenance.
8) He did not do extensive electrical or mechanical restoration of the
radio, alignment, or cleaning, other than replacing the panel, knobs and
frequency readout escutcheon.

There was a discussion between Howard and Gary about Dr. Robbins' desire to
have the radio sent to another well known restorer of R-390A's and keeper
of an extensive web site on the subject. It was Howard's opinion that the
radio performed well and since it was moderately clean to start with, the
value added would not be worth the cost. The well-known restorer was
offered the job but delined it.

Howard accepted the job of installing a refinished black front panel, knobs
and frquency readout escutcheon. The panel he installed was of the type
that uses a longer nomenclature tag. The tag on the replaced panel was

from Motorola. The panel, knobs, and frequency readout escutcheon had been

refinished with black satin powercoat paint. The charge for the panel was
adjusted upwards to account for the need for metal restoration work on the
exchange panel.

He re-installed the original meters without refinishing them. The powder
coating process he uses involves baking at over 500 degrees F and only
meter fronts that are separate from the meters can be refinished this way.
The heat would ruin the whole meter.

The now-blackfaced radio was shipped by Gary to Dr. Robbins within the last
few weeks. Dr. Robbins posted Item 5761820560 on Ebay on March 20, 2005.

A background note on black faced R-390A's: Howard bought an R-390A with

a black panel at a hamfest about five years ago, and still has it. The
panel is black *anodized* aluminum, not painted, and appears to be the
original panel. Visitors to Howard's shop commented on the black radio

and
so Howard refinished a batch of panels in black satin powder coat
paint. He now offers these panels on an exchange basis for $150.00. Meter
covers, knobs, and frequency readout escutcheons are available
also. Reports have been heard from time to time about black faced R-390A's
and the government agency that is supposed to have used them. I don't have
any good information from people who were "there at the time". It appears
that at least one batch of R-390A'a was built with black anodized aluminum
panels. The panels, knobs, etc., that Howard offers are black satin power
coated.

I summarize the situation.
The quotes are from Ebay's auction Item 5761820560.

1) "This is my carefully collected, thoroughly restored,
intelligence-agency-black R-390A."
- Gary shipped a black-faced R-390A to Dr. Robbins within the last few
weeks. That radio had not been recently restored except for newly
refinished panel, knobs, and frequency readout escutcheon. The finish
used

was black satin powder coat.

2) "...the radio has been perfectly aligned."
- No alignment was done recently to the radio shipped to Dr. Robbins. That radio was working well and apparently not in need of alignment. No thourough testing for such things as sensitivity, IF alignment, BFO calibration, PTO endpoint errors, HF crystal oscillator peaking, or the like had been done on it.

3) "I have compared this receiver on CW, SSB, and AM in hundreds of A/B tests with my Icom IC-775DSP."
- Comparisons with the radio Gary sent to Dr. Robbins would have been done in the last week or two.

4) "It is mechanically, electronically, operationally and cosmetically as close to perfect as any R-390A you'll ever find anywhere, and absolutely beautiful. When you first take it out of the box YOU'LL THINK IT JUST CAME FROM THE FACTORY--NO EXAGGERATION (only the rear panel reveals this receiver has ever been used)."
- The radio recently shipped to Dr. Robbins by Gary had a moderately clean but not pristine interior, the meters had been removed (unsoldered) and replaced in the refinished panel, the COSMOS PTO has scratched and damaged label, and the modules in the radio appeared to have been a collection of various modules from normal depot overhaul and maintenance.

5) "(... this is the best by far). I have had great pleasure restoring it to that highest level, and I do not like to see it go, but I am ageing and near retirement ... "
- The radio shipped to Dr Robbins by Gary was not pristine inside and had not been completely restored in the manner expected from Howard or the well known restorer of R-390A's who declined to work on it.
- It appears that Dr. Robbins is 61 years old.

6) "Third, the receiver comes with a NEW-STYLE SSB CONVERTER that simply attaches to "line," "AGC" and ground connections on rear of radio; no internal mods. "
- In the past a sealed module was offered that attaches to the R-390 in the same manner that creates audio-derived AGC voltage. An article appeared in Hollow State News about the module, and reported poor

performance compared to the radio's normal AGC system. The module was
taken
apart and found to consist of one diode, one capacitor and one
resistor,
the values of which were reported. The author may have been Dallas
Lankford. The module reported on was supposed to help in AGC action
while
receiving SSB signals, *not* convert IF signals to audio as other SSB
adapters or internal receiver modifications do.

7) " METERS ARE ALL ORIGINAL(!), a rarity. I wanted to keep them that
way,
so didn't powder coat."
" ...the inside is as clean and neat as the outside, ..."
- It is the sellers opinion that original meters on an R-390A are
rare.
Other workers familiar with the radio find that meter-less radios or
radios
with substitute meters are the less common.
- The meters on the radio shipped recently to Dr. Robbins had no
removable front bezel and so could not be powder coated.
- The front panel of the radio shipped recently to Dr. Robbins had
been
recently refinished in powder coat paint. The interior was clean but
not
pristine.

8) "Cabinet is FACTORY NEW (yes, BRAND NEW!!), a shiny
intelligence-agency-black milspec CY-979A, the only new black one I
have
ever seen."
- In the last couple of years, a number of new CY-979A cabinets were
available from Mac McCullough. It is not clear if any of those were
black. It has been reported that those cabinets came from a military
source. The three at this location appear to be genuine military
equipment
and arrived in new condition.
- The front panel of the radio recently shipped to Dr. Robbins is
black
satin powder coat and would not match a shiny finished cabinet.

9) "NOTE: NOTE: I should have mentioned that Bidder ID is kept private
in
this auction to protect the privacy of honest bidders. A growing number

of
dishonest individuals make it a practice to contact and even harass
those
who bid on someone else's listed items, and I don't intend to help
them. "
- A (possibly growing) number of Ebay sellers make Bidders ID's

private
to allow them to cooperate with someone who dishonestly bids the item
up in
price with no intention of actually buying it. This may entice bidders

from such places as Germany and Japan to become interested in the item,

and
bid more for it than they would if they knew its true condition. The
world
of gambling uses the words "shill" "mark" and "patsy" to describe this
activity.
- Reports have been seen of extreme dissatisfaction among auction
winners
when they asked Ebay to help resolve issues with sellers.
- It is unclear whether a seller of an item with private Bidders ID's

has
access to the bidding information, but a noble step would be to ask all

bidders if they mind revealing that information later and make it
available.

10) "... dishonest individuals make it a practice to contact and even
harass those who bid on someone else's listed items, and I don't intend

to
help them. "
- I belive I am an honest individual, and I certainly would send a
copy
of this to bidders of Item 5761820560 if I could. My intention would
be to
help them understand clearly the nature of what appears to be offered.

That is the situation as I know it.

The persons name who posted this has been deleted.

My educated guess is since there are no snakes on the islands of Hawaii,
Bush feels the laws of the garden of Eden do not apply there. Therefore no
rapture can take place there. So, by keeping the discussion politics,
hopefully they'll find Nascar since all roads lead to Bush.....

Don't make that mistake about Springer!

He is a sharp lawyer, slick politician, and one of the most successful businessmen in the entertainment industry! Just because he chose a gutter-theme in television, it was a route that he made an empire out of. If he gets a talk show venue, he will be the first liberal with the brains to offer real debate, and that will be good for Rush and other conservative pundits. Unlike Al Franken, who is nothing more than another bad writer for Saturday Night Live, without a political thought that could impress a fifth grader. Since the uneducated and underemployed are Air America's market, it would seem unlikely it could attract someone of real intelligence such as Jerry Springer. After all, Springer makes millions prostituting himself to idiots already, and how could a financial lightweight like Air America afford him?

AFN has several TV and radio feeds:

TV:
AFN Prime (Pacific)
AFN Prime (Atlantic)
AFN Prime (Korea)
AFN Spectrum
AFN News
AFN Sports
AFN Family
Pentagon Channel

Radio:
Adult Rock & Roll
Z-Rock
Hot AC (Adult Contemporary)
Bright AC
Country
The Touch
Oldies Radio
ESPN Radio
Fox Sports Radio
Sporting News
Sports Byline USA
NPR
Uninterrupted Voice Channel

AFN local programming is generally a combination of the above services, all
of which are available to the installations via satellite. They are also
available to military, DOD civilians and contractors in Europe and Asia.

" He is a sharp lawyer, slick politician, and one of the most successful
businessmen in the entertainment industry!"

Really? And what do you think lawyers and politicians are?? He seems to have
found his real niche in life. As to how they can afford him, it's called

"subsidizing"

George Soros and friends...

Not sure I see the point in your quote-and-question (not all lawyers, or all politicians, are scumbags, but maybe all lawyer-politicians are? ;). But true he must indeed be either subsidized, or a "volunteer", LOL.

Jack

Bite me?

I do believe that what the founders had in mind was 'terrestrial radio'...

But hey... you just keep toting it, 'tard.

4757. Recommend Best MW/AM Band Radio (+ Antenna)

Newsgroup: rec.radio.shortwave
Date: 2005-03-27 20:56:01 UTC
From: greg.wilder@insightbb.com
Message-ID: <1111956961.057970.58150@z14g2000cwz.googlegroups.com>
Source record: 14145

I have owned dozens of radio's over the years, including many shortwave. What I really want is an excellent MW/Commercial AM radio. Seems like it is getting harder and harder to get good AM reception. Probably due to many other electronic devices creating interference. I live in a large city and even the strong city AM stations don't come in so clear.

What does everyone here suggest for a good radio? (Portable) Either new or used.

I guess I also need to consider some kind of external or outside antenna. What kind of antenna's does everyone recommend? How about the C Crace dual ferrite at around $99 dollars.

Anyway thanks to all in advance...

Greg

I'm going to have to rename you Paul Harvey since this appears to be the rest of the story.

I would not participate in an auction where the bidders were not known. This can only lead to mischief.

The formating in this post made it hard to read so I made an attempt to fix it not knowing what it originally looked like. What happens is that people use two spaces between sentences and when quoted causes the paragraphs to get broken up.

Thanks for posting this information.

Your vote is your business, but since you need help understanding our point, Air America doesn't have the advertising to lure a millionaire success story like Springer to a "new job". Therefore to assume he is really going there, it must be that Soros and company made a big donation to Springer's favorite charity, so he would volunteer his time.

And that would be called venture capital. For example, Fox Cable took
several years and many, many millions in speculative funding before it
made a dime for it's backers. May AA be so lucky.

BTW: I'm told that the Washington Times newspaper has always run in
the red and just serves the ends of Sun Myung Moon.

As of today, AA reaches 60% of the population as potential listeners
on AM radio, and is also on XM and Sirius, and a huge number of people
hit it via the internet via what is said to be the biggest streaming
server in the world.

For a network just celebrating it's first birthday it's doing great.

I've heard Springer talk about serious stuff and I think he'll make a
great issue-oriented funny host.

So I'm used to tuning to Radio Japan after Netherlands signs off at
21:00 UTC and flicked the dial to 17,725 and was puzzled that they were
not there. I had to turn the dial the other way to 17,825. I was used to
turning down the dial from RN when it when off. Habits are tough to
break.

I found Yahos new and improved style so shity that I have
dropped all but 1 Yahoo group. And I plan on only checking
it once every couple of weeks.
It took over 7 attempts to post in the two groups I really cared
about, and the one group that I still belong to takes many attempts
to retrive posts.
With any luck Yahoo will choke to death on this smart update.
Lifew has enough frustrating events that I can't avoid.
Why would I want to add such pain to my hobby?
Terry

Soros has no involvement with AA, and Springer probably got a good guarantee
and, maybe, some options or participation in the net. Given his politics,
this all makes sense.

Most groups are moderated, which means someone has to review the posts
and decide that they show up or get tossed so they have to do it every
day or your posts take more time to show up.

Soros down't hide his agenda. A google of soros+"air america" comes up
with 6 random unrelated hits. A search of his web site, soros.org
also comes up empty.

Clear Channel seems to be investing a fair amount in AA based on the
number of CC-owned stations that are buying into AA programming. If
the first couple weren't making CC money I doubt they'd have expanded
as rapidly as they have.

>as rapidly as they have.

The programming is barter. The only "buying in" Clear Channel is doing is giving up inventory for Air America to sell. It was many years into Rush Limbaugh's show that he became a "must have" show that stations would pay for. Nothing on Air America has attained that status. Hard to do after one year on less than great signals.

Rich

I think they're talking about cheap CAT 5 wiring. Not the 2.4 gig
stuff. Good Cat 5 wire has twisted pairs that inherently reduce
interference. If there's a problem, I'd use ferrite beads every 6
feet or so (or just wherever practical).

Message-ID: <n5H1e.1989$vG.1328@fe02.lga>
Source record: 14347

A few minutes ago, I had my PL-350 outside tuning around SW and I found a station on 17.705 playing the song "Suicide Blond" by INXS. It was reading 5 out of 5 on my signal strength meter. At first, I thought I was just getting an image from a local broadcasting station, but no station in my area was playing that song. I went back to 17.705 and it was still clear as a bell. But as the song ended, so did the carrier. I kept listening for a few minutes, and there were a couple of more times I observed a carrier, but never any more modulation. Don't know what that was.

I've not heard of any problems with power-over-ethernet causing
interference to hams. (that said, this is the first I've heard of
power-over-ethernet period!)

I think he may have had it confused with the opposite system,
broadband-over-power-lines (BPL) which DOES cause severe shortwave
interference.

I suppose there is some possibility that the provided 12v DC power unit
is not adequately filtered and that it radiates interference. I would
think a ferrite choke core (available at Radio Shack), placed as close
to the power unit as possible, would probably take care of the
interference. You *might* need another one at the wireless box itself.

But I wouldn't be all that worried about it.

< Snip >

Think of small switching power supplies running on 24 to 48 volts and
switching from 100 to 500 KHz. Bad news. Bad, bad, bad.

The idea is to be able to connect networked devices and also power them
over the ethernet cable.

Not popular yet and I hope it stays that way. It's been around a few
years now. Besides the noise generation potential its a lame idea anyway.

Interesting. When I tune to 17705 right now, I hear an weak AM station, probably Radio Havana broadcasting to S. America.

Let us know if you hear it again.

Not always bad. They were developed for industrial use to interface
with other systems. A poorly designed linear power supply can generate
a lot of noise if the diodes are cutting off fast enough to create
noise. A lot of designs use a small capacitor across the diode to swamp
the oscillation at the switching point. A well designed and shielded
switching supply can be very quiet. Just because it has a long power
line doesn't mean it has to create and radiate noise.

Well, it's supposed to be cheap way of doing things and you know what
that means. Poor filtering due to cost and no space to put the
components anyway in those little bricks.

"W",
.
GE Superadio III - An External Antenna is not always . . .
The Best Answer !
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2726
.
If you are using AC Power with your GE Superadio III :
Then First Try Using Battery Power ONLY.
.
Try 'rotating the GE Superadio III to Eliminate the Static Noise.
.
Try Attaching a Ground Wire - Find a Cold Water Pipe
and Connect a Wire from it to the Ground Terminal of
the GE Superadio III.
.
IMHO - Considering the information that you have provided
about your location and surroundings; adding an External
AM/MW Antenna would simply result-in you bringing in
MORE Static and Noise to your GE Superadio III.
.
.
INFO - Check-Out these two YAHOO ! eGroups

That's because a "printer driver" is something Tracy thinks he can
understand. Sad to say, he can't. He can't figure out other projects
or acronyms. I'd love to see him try to figure out ke_us_ke... who
knows? I might even have an unclassified partial prototype somewhere.

"Cheap" in industrial settings means not having to run conduit, new power lines and put up with low data rates or pay for several days labor to install this stuff. In a pinch they can stick a hub at the nearest computer or other item on the network and add the DC power to the Cat 5E wire and be in service in a few minutes instead of expensive downtime while a more conventional system is installed.

I have the Degen 1103. It's a great little portable for the money, but it's no DX machine, and not in the same class as the Drake or Satellit 800 lines. It's an ergonomic pain in the patoot to operate compared to most sub-$100 portables, too; I've pretty much gotten used to its idiosyncracies, and I have been impressed by its nice performance. However, I would not consider this is a "main" radio unless you had no more money to spend than $75.00 on a radio. It would be a nice adjunct to a better tabletop radio.

Yes, I believe it. That is the entire spirit of venture capital or sweat
equity. Sure, he is paid. But he is probably being given extra perks, too.

Body handling: HTML body converted to readable text

It is definitely a nice unit. The audio reminds me of an old SX-28 I had years ago.
For bedtime listening, I usually switch off between the Palstar R30, the AOR7030, the Lowe HF150, or one of my homebrew MW radios. The interesting thing for me is when I listen to some of my favorite regional / graveyard frequencies, they sound almost the same as they did when I was a kid in the early 60s. I almost feel as if I am travelling back in time when I listen to those channels. 1600kHz is interesting.....when I was working out in Cedar Rapids, some of the folks used to listen to KCRG. It's kind of fun hearing it surface every so often from the murk of all the other stations on that frequency when evening rolls in.
WMT, 600kHz comes in pretty good in Chicago.....in the evening, you can hear a Columbian station on that frequency.
They did it right when they designed the 7030. About the only thing I will do when I get around to it is replace that mechanical tuning encoder with an optical unit. If the tuning setup is similar to the HF-150, I will only need to remove a couple of pullup resistors, and maybe a couple of steering diodes. Of course, I need to find 5V for the encoder. I need to pull out that schematic.....

I didn't. I was fortunate. But others did. What's the difference?
If you get your leg blown off as a civilian worker-bee in Iraq, you
don't get a medal. The people I knew who got shipped out had
absolutely no say in the matter whatsoever.

They, too, are far better people than you could ever hope to be.

There's no "downside" at all, assuming the price for the transceiver is reasonable and within your price range.

For SWLing, you would only use the "receiver" portion. If, however, you decided you would like to become a "Ham," well, you're all set!

Best,

Joe

Dear "Cuhulin,"

Here is the web site. I do not own a Linn Sondek LP12, though I appreciate its engineering which is such that it can be updated, as can the AOR AR7030 Plus. I have always felt, however, that the Sondek's design is inherently flawed. I am, in addition to being a short wave listener, an audiophile from "way back." When I bought my main turntable back in 1982, I considered the Linn, but I felt (and still feel) that its design is too light-weight for a belt-driven turntable. At that time I purchased a Logic DM-101 which has a much heavier base and platter. (You can pound it with your fist while a record is playing and nothing happens!) The heaviness of the turntable allows the use of an extremely light-weight arm and, therefore, a very high-compliance cartridge that will allow tracking of the most complicated grooves. High-compliance cartridges are quieter than low-compliance ones and they also "wear" the records far less. They're also quite expensive. (I also own a Thorens TD520 turntable which is designed in a similar fashion to my Logic.)

Please note that while many audiophiles disagree with me about my conclusions concerning this turntable, frankly, I think they are wrong and my conclusions can be proven by simple physics. (I also have a good friend who has both the Logic and the Linn; his Linn is "retired.")

However, just FYI, here is the web site for information about the Linn Sondek LP12:

http://www.linn.co.uk/spec_sound/product_display.cfm?ProductID=6&activeNavBar=products&activeSubNavBar=Source

It is undeniable that Linn, a Scottish company, has engineered this product with the future in mind and its quality is absolutely top-notch. I very much admire this kind of engineering and that is one of the reasons I bought an AOR AR7030 Plus, English-designed and built, with an eye toward the future, instead of any other receiver.

Best,

Joe

Dear "Conan Ford,"

>According to Radioworld.ca, Sony Canada no longer supplies the 7600GR.

If that's the case, try Universal Radio, AES, or J&R Music World in the US. All have web sites, though I believe you have to actually order the ICF-SW7600GR via telephone. (That may not be true for J&R - they may offer internet purchase; you'll have to check.)

These companies are reputable; I have dealt with all for many years. Note that AES has always had the AN-LP1 antenna in stock whenever I've wanted one (I have five!) and you may want to consider buying one for your radio. The combination offers extremely good performance and, incidentally, "travels" well on vacations, and so forth.

Best,

Joe

Here's the big reason Jerry Springer signed up AAR as a network-wide
affiliate for his show: It gets him on in New York City, on AAR
flagship WLIB/1190.

Clear Channel owns no AMs in the NYC metro, and CC alone wouldn't be
enough to get him on in NYC. So, now he'll (likely) be on all three
of the largest markets. I'm sure CC's KTLK/1150 in Los Angeles will
squeeze him in somewhere (perhaps dumping Morning Sedition for a live
6-9 AM clear), and Chicago is rumored to be added to the AAR affiliate
list, probably via another CC station (1690?), within days.

So, NYC was the only top-3 market hole for Springer, and now, it won't
be.

Anonymous,
.
Shortwave is a 'small component' of the "Total" BBC Operation and
Budget.
.
Currently the BBC as an Organization is laying-off thousands of people
in TV Broadcasting and Domestic (UK) Programming so that they can have
the needed Financial Resources available within their Budget to Invest
in New Facilities and Improved Technologies for the Future of the BBC.

Dear Jackie,

>What frequency? AM or SSB?

>Thanks!

>Jackie

"Marion's Attic" is on WBCQ-"The Planet" 7415 kHz (straight AM - SSB not necessary unless you want to use ECSS tuning) on Saturday evenings at 9:00 PM in the eastern time zone (using "proper" SW terminology, it's on Sunday at 0200 UTC next week, and then, after DST starts in the US on April 3, it's at 0100)

Last night's show was great; don't let the "old lady" announcer annoy you ("her" voice is "grating!"); the music "she" plays more than makes up for it! (And "she" DOES have a certain charm.)

Let us all know what you think of the show.

Best,

Joe

> information is "INCURRECT"!

5975 was S9+40 at 0210 tonight. Surprising, considering it's now out of Guiana beamed towards South America. I started out listening to their new frequency of 9825 because yesterday 5975 abruptly went off at 0200. 9825 was about S7-S9 with a really bad het caused by it being so close to Radio Havana on 9820, but I nulled the whistle using USB. When 9825 started to fade, I switched over to 5975. If 5975 continues being this strong I will continue listening to it. BTW, 12095 is pretty much inaudible here in California, last night you could barely hear it popping above the noise floor every so often, tonight nothing. 12095 is towards SAm from a UK tx.

The BBC made plenty of announcements on air about their reduced schedule to the Americas, but they directed listeners to their website, and I don't know how many South American listeners have access to the internet. As far as I know the schedules on their website are correct. 5975 is beamed to South America instead of the Caribbean after 0100, but I believe it's on to SAm until 0400, albeit from 2 or 3 different transmitters.

DW has shut down ALL services to the Americas, and the BBC is getting there. If you're in the western US/Canada you can probably hear the Asian streams, especially Singapore and Thailand, in the early mornings and for a couple of hours in the late afternoon, but with different schedules. The European state broadcasters are indeed run by politicians, and those politicians are too dazzled by new technology (the web) to realize that SW has its advantages and its place. I guess that's not as bad as Voice of America, which is run by imports from American FM radio station management who are intent on shutting down the old VOA and replacing it with music services carried on FM stations. Think Radio Sawa. It's American FM, except in Arabic. And the stated goal is to reduce terrorism by broadcasting rap music to Muslims. So far, it's not working, and I doubt it will.

Two words: budget cuts. Across the board. DW and RN have the same problem, as do most of the small European broadcasters, which are shutting down SW operations entirely to save money. State funded broadcasting in Europe is in big financial trouble as the governments struggle to stay solvent and within EU budget specifications, which require that budget deficits be no more than 3% of the budget. It's not just the BBC, it's everybody.

Body handling: HTML body converted to readable text

I use it for the bedside radio because the remote is pretty handy on a
king size bed. I don't want to keep rolling over to the side to change
channels or make adjustments.

If I'm having insomnia I'll tune in George snorey or if I'm interested
in active listening I'll tune in short wave.

Yes, 12,095 is usually not great for southern California either.

5,975 has been and still is good. Is 9,525 still on earlier or did it
move to 9,825 today? Maybe that was a typo?

If you go wireless for your computer(s),you definatley need the best encryption for your computer(s) www.linksys.com sells some good hardware routers that can be used as hardware firewalls.If there is a www.compusa.com store in your area,I recommend going there and talk to someone in their computer repair department.Them other computer stores,stay away from them! they don't know anything about computers,their job is to sell computers and that is all they know! I will never go wireless with my computers!!!

I'm hearing a lot of news with a certain spin that can only come from a genuine dislike of America. It's subtle, of course, but you have opinionists from Radio Netherlands for example, comparing George W. Bush, Condoleeza Rice, and Donald Rumsfeld to Hitler, Himmler, and Goebells.

They obviously cite our pre-emptive war in Iraq, and our war on terror as a logical means to make these comparisons, yet...

They never mention or debate the justification that the insurgency (I hate to use that word, because a true insurgency has real numbers behind it. What these people lack in numbers, they make up for in sheer brutality, and unrestrained terror.)

The way these news organizations display the situation is that everything was just fine in Iraq, we went there, and since being there, there's been nothing but an orgy of destruction.

There is progress being made, and we can debate the war 24/7 if it suits someone, but the intellectual dishonesty and abusive rhetoric has the potential to do a lot more damage to international goodwill between Europe and the U.S. and might eventually be planting the seeds of an alliance against us.

I'll use Europe giving the Chinese weapons and technology as an example...

Just don't think the TRUTH is being sought, is all. I reserve the right to be wrong, but I don't know why our credit rating is so bad with the PEOPLE of Europe. I can only think that would happen because of a propaganda machine.

I know a few attorneys - like my brother, sister, and uncle, yes. They are not ambulance chasers and do not belong to the horrible American Bar Association that makes a team sport out of mangling the US Constitution. And I know a few politicians, like some of my Virginia State delegates who are honest businessmen trying to represent me and deal with the problems the state faces in an honest and professional manner. Beyond that, I will allow many of either ilk are bad actors. But I won't stereotype all lawyers as bad because their ABA is awful. Not are all doctors are corrupt just because the AMA has nothing to do with health or honesty, just promoting itself, whether that means advocating truthful positions, or accepting bribes from Archer-Daniels-Midland to say carbohydrates are good, meat is bad, even when they knew better. The AMA also knows that ADM's fuel additive MBTE from corn-ethanol is a terrible poisonous pollutant, and does absolutely nothing to make the air cleaner, but they of course support it, and drag the sappy American Lung Association along with it. To get back on topic, I have heard Springer orate, and he is a very intelligent.man. I'm a conservative an I don't agree with many of his positions, but the best news is that neither Al Franken nor Rush Limbaugh could keep up with a debate between Springer and any other intelligent person.

Best regards,

Jack

jimg wrote:

I understand that the engineering costs to update any of these receivers (like the icom r-75 and the drake r8b) is prohibitive. None of these companies can afford to develop custom IC's, and in the last few years many of the companies like analog devices, maxim, philips, toshiba, and sony have discontinued the processes that these basic comm functions were implemented with.

The prevalence of dsp processsors, high frequency high resolution sigma delta adc's, even progrmmable sige vga's with more than enough bandwidth to be used as rf front ends for HF alter the entire design approach. In a few more years, adc's able to digitize the hf rf will be affordable.

It's getting so attractive, that I've been thinking of designing a very high performance hf radio using the current generation of ic's, especially those used for wireless and datacomm applications to date The majority of the design will be the firmware development.

Of course, it makes sense to rely on your laptop for a display.

I think the real challenge is to create / compile a detailed spec/feature list to drive the development. I don't know if hf radio developments to date poll their consumers, but it would be great to create a pareto list of features not from a few but from hundreds of knbowledgable devotees followed with a carefully detailed set of performance specifications... with design tools like Spectre RF and system simulation in Simulink, the radio can be built behavioraly and checked out long before soldering.

Would people be willing to put in the time to carefully think and document what they want in a radio? Would they be willing to continue to review and participate in the development? Over a period of half a year or more? And do you think there are 100+ who would be able to contribute effectively?

Unlikely. They just put an addition on the trailer just for the extended family. The latest survey shows that eighty percent of those caught torturing and killing prisoners in Iraq have close relatives living in Georgia trailer courts. The other twenty percent had no fixed address before joining the forces. Ninety percent never completed Grade nine.

It was the strangest feeling. I was poised to make yet another insightful observation of the Ace's shortcomings when I was suddenly transported into cuhulin's brain. It was very cramped and fetid. Somehow, in what may be evidence of psychic phenomena, the previous message was transported through me, to the newsgroup. I sincerely hope it never happens again.

The episode can be compared to the out of body, near death experiences reported by some who came back to tell. Well..sorta..for one thing there was no bright light. Not even a dim light, come to think of it.

I own some old antique dolls and a mechanical Laurel (Laurel and Hardy) wind up toy.Wind it up and it "walks" forward and I own some more old antique toys too,but I don't play with them.One of my antique wind up toys is a wind up Mule toy and it actually moves it's legs and walks too.It was made in Japan at the end of World War Two and the two seperate sides of the body of the Mule are made from American beer cans.

Humph! that's news? I have always known AFN has multiple streams.I used to listen to it in Vietnam in 1964.They had a broadcasting station in one of the hotels in Saigon and their broadcasting tower was on the roof of that hotel too.I have seen it many,many times when I was in Saigon.I used to have a shirtpocket transistor with me most of the time over there and I would listen to them and sometimes I would listen to some Vietnamese radio stations on my transistor too.Well,let me cut the light now,past time I get my beauty sleep.

This is a nice dream but design by committee would be tough. Plenty of
people like myself would not want a laptop connected to the radio. I
would want a stand alone operational radio. Connecting the laptop for
additional displays like spectral would be OK as long as the radio
operates by itself.

Starting out with the abilities of an all round capable R8B would be a
good start for a feature set.

How would such a project be managed?

I was a member of the groups in question.
Before the great update, I would see most of my posts in a few seconds,
at most 5 minutes. Now Yahoo gives no errors, and just returns to the
openening page, with no
visible messages. It takes up to 7 atempts before it is accepted, and
then I
am returned to the home screen, again with out messages.
When I enter the group the same thing, home page with no messages.
And it isn't only me, several friends, in widely diverse groups have
the same error.

If they ever resolve this improvement, I can always join again. For the
time
being I will spend my time in more productive ways then fighting broken
software.

Terry

Well, at least one of them is waiting for that covert "go" signal.

Until then I guess they have to hold it.

Source record: 14371

Ah, so you noticed this phenomenon also? Glad I am not alone.

What I find especially troubling is the lack of "focus" or criticism, towards
truly murderous regimes. And the undeserved "friendly" approach to
the worse regime of all time - China.

I am beginning to see that it is all about money. China is a perfect example.
When companies go global they don't give a damn about human rights,
freedoms and democracy with which they profit from. These companies,
as well as the governments that they must deal with, have an ongoing cozy
relationship in which both parties profit at the expense of the peoples
of each country.

Ex: US publishing & media companies with business interests in China whom refuse
to publish books or air programming which do not place China under a
"favorable" light.

Ex: European satellite company which cancels contract with a media company that
broadcasts uncensored Chinese content to the mainland because of pressure
from the Communist Party.

Ex: US hotel which refuses to honor reservations from a religious group which
is persecuted in China while a high ranking Chinese official stays at a hotel next
door.

And these are a drop in the bucket. I see the only recourse to this phenomenon
is to avoid Chines products as much as possible as well as writing letters to your
congressmen as well as the media, including the BBC as they are included in
the above examples.

The internet is also under attack on both sides
of the "Great Wall". Soon blogs will have a hard time existing because they
have "infringed" on the exclusivity the media deem is theirs in regards to
"information". This will become a dangerous socio-political situation in
the not too distant future if it is not "nipped in the bud".

I received my first EQSL about two months ago and it was as excittting
as
the first snail mail QSL I received back in 1966. A few days later
another
pirate sent a snail mail QSL and a CD-R containing the entire
broadcast.
I can see why many priates would prefer the EQSL as there is less
expense,
with faster turnaround.

I hope to get my new and improved, and redeisgned 4 time QTH back in
shape this week. A tree limb came down in a mild T-Storm last night
and ate my "long" wire antenna. Wire is cheap and I have plenty more.

So, welcome to the club. Most talk show hosts today are known by their
political bias. Except those who are fair and balanced on FOX.

Air America bills itself as a Liberal network. There isn't a network
that claims to be Conservative. They leave that to their hosts.

Sorry to be so realistic, but Springer signed up for money and an
override on advertising that runs in his show. I've worked in Talk
Radio too long to believe in fairy tales. High visibility
personalities don't sign up to work 15 hours a week for free.
>

In an unrelated story, on 26 March (yesterday) BBC has
brought back it's long successful SciFi program series
DR. WHO. (currently only available in the UK)

The opening episode of the first full series since
1989 saw the Time Lord - played by Christopher
Eccleston - meet his assistant Rose (Billie Piper).

Written by Russell T Davies, it is the first of 13 new
episodes of the drama, which was first screened in 1963.

"We're pleased so many people sat down as a
family to watch the return of the Doctor," a BBC
spokesperson said.

Unofficial overnight figures show the programme got
an average of 9.9 million viewers - 43.2% of all viewers -
with a peak of 10.5 million viewers, a 44.3% share of the audience. (44.3%
!!!!)

Correct observations. The re-structuring will affect both the
World (external) and Domestic (internal) operations of the BBC.
Both the people who watch and/or listen to the BBC are not
happy and feel that these actions by Management will dilute their
historic coverage of the news and programming as a whole.

The 2,050 job cuts - including 424 announced in
December - take total job losses at the BBC
to 3,780, saving ï¿½355m ($682 USD) a year.
The combined cuts amount to 19 percent of the
BBC work force.

Well, of course he did. I wasn't saying he was working for free...
that wasn't my point.

I was just trying to figure out in my mind why Springer needed Air
America Radio. It would seem to me that he wouldn't otherwise need
them. Clear Channel (not Premiere, but Clear Channel itself) has been
syndicating his show to many of its major market talk stations,
including non-liberal talk station WTAM/1100 in Cleveland. Why does
he need Air America as an affiliate, when many of Air America's own
affiliates are run by Clear Channel, and CC could just put him on
without them?

NYC. That's why. Unless they buy an AM in NYC (unlikely) or flip an
existing FM to liberal talk (about as likely as those porcine
creatures sprouting wings), Springer wouldn't get the Big Apple
without AAR, period.

I don't know the monetary situation at all, but it appears Springer
would have no need to hook up with AAR without WLIB's presence as
their flagship.

>In any of those three markets will his signal be comparable to
>Limbaugh's. As good as WABC? As good as KFI? As good as WLS?

In NYC, WLIB/1190's second-grade signal is enough to apparently make
them at very least competitive (if not more) with your old home, WOR.
I haven't seen the latest numbers, so I don't know if that's still the
case. It's not nearly the equivalent of WABC, signal wise... but
without WLIB, Jerry's not on the air ANYWHERE in the NYC market.

The Los Angeles station, KTLK/1150, is a full-time 50KW signal
competitive with KFI and KABC.

The Chicago station is not...likely current "real oldies" station
WRLL/1690. It's not a 1KW daytimer (it's high-band 10KW days/1KW
night from a southside stick)...but it's anemic compared to WLS.

...Not so subtle.

Are there any news or public affairs programs from foreign countries which are more neutral or friendly towards the US? I don't usually listen to the major broadcasters myself, except to check propagation.

You've gotta update your rumor mill, David. :D

The latest information, straight out of Robert Feder's column in the Sun-Times, is that AAR is expected to be heard sometime in the next few days on a Clear Channel-owned station in the Chicago market. Of course, CC owns neither WAIT or WONX.

The affiliate, assuming the above information is true, would likely be current "real oldies" station WRLL/1690. Not the best station in the market signal-wise, but a full-timer and somewhat better than WAIT or WONX.

One thought I kicked around...that WGRB/1390, CC's other AM in the market, would somehow be involved...maybe they'd move it to 1690 and turn 1390 into the liberal talker. But either way, if it's CC, those are the only two stations they have to work with.

Hardly. Doesn't get into Southern Orange County, the Inland Empire or
North of San Fernando worth a crap.

They're competitive enough in the daytime in the places I've been.

Dallas, L.A., Phoenix, San Diego

And WCKY is pretty good at night all over th Ohio River Valley, isn't
it?

In the just-out exctrapolated month of Feb, WOR beat WLIB nearly 3 to 1.
>
> The Los Angeles station, KTLK/1150, is a full-time 50KW signal
> competitive with KFI and KABC.

No, it is not competitive with either, even WABC. It is highly directional,
most of the power going ot to the ocean. It has to protect 1150 in Mexicali,
so no signal towards the South, meaning the OC. It is vastly inferior to
either station you name.
>
> The Chicago station is not...likely current "real oldies" station
> WRLL/1690. It's not a 1KW daytimer (it's high-band 10KW days/1KW

Apparently the Chicago station is either WAIT or WONX, both... arf, arf,
dogs like the "Dallas" affiliate.

with Traci Fort makes him look to the rest of us?

4975. Pastor Peters gaining, Bro. Stair losing AIR TIME ???

Newsgroup: rec.radio.shortwave
Date: 2005-03-28 15:38:46 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <114g97uhgn0frb0@corp.supernews.com>
Source record: 14513

I thought Bro. Stair was the only one on 7465 and 5765 but I believe Pastor Peters picked up an hour on each last night.

Does this mean Bro. Stair is giving up some air time on WWCR? Perhaps he's just trading some air time from transmitter # 4 to some of the other transmitters because he's on 5070 a good bit and that is NOT Trans. #4.

I believe he used to have transmitter #4 exclusively and still had some air time on other transmitters.

Thus, it appears, Bro. Stair is CUTTING BACK on his WWCR air time. I heard him say the other day that there are still FOUR people who are going to send in $100,000 and ONE who is going to send in $1,000,000. He was telling about 23 (?) transmitters he could buy air time on -- if he could only get YOUR money to do it with. He *may* be cutting back on WWCR to purchase elsewhere.

My *guess* is he's just CUTTING BACK - PERIOD. ....Because the funds are slacking off. He throws in a defensive comment every now and then about the "lies" some folks are telling on him.

Anyone know what the real deal is on this? Coca-Cola? ;-)

I have no problems seeing yahoo groups and messages.
About a year ago there was an announcement from yahoo saying
posting messages would be delayed due to the many worms and trojans
going around. I guess they scan everything before letting it go online or
to those who get messages by email.
I usually have to wait to see any message I post show up
in a group, but otherwise it works fine.

The "first" was a signal for broadcast, but not the first radio signal from Europe. On 12 December 1901, Guglielmo Marconi succeeded in broadcasting the first radio signal, the letter 'S', from a station at Poldhu in Cornwall to St. John's on the island of Newfoundland, Canada.

here's another opinion, in the same vein, from the Toronto Sun
http://www.canoe.ca/NewsStand/Columnists/Toronto/Peter_Worthington/2005/03/28/974116.html

Mon, March 28, 2005
His legacy's painted in yellow
By Peter Worthington -- For the Toronto Sun

Although some are disappointed, no one should be surprised that U.S. army deserter Jeremy Hinzman's bid to be a "refugee" has been rejected.

Hinzman himself says he expected this decision from the Immigration and Refugee Board, and will launch his appeal today. It will likely enable him to remain in Canada for years like other illegals.

Looking at it objectively, it's hard to imagine a case weaker than Hinzman. His three main themes for deserting are: 1. Iraq is an "illegal" war (what's a "legal" war, one wonders?); 2. He was afraid he'd have to commit atrocities in Iraq; 3. He decided he was a conscientious objector, even though he volunteered to become a paratrooper in America's most gung-ho unit, the 82nd Airborne.

'Fear of combat'

While good manners dictate that no one wants to come out and say it, it's hard to escape the stark conclusion that Jeremy Hinzman is a coward.

A Globe and Mail editorial put it gently -- and I'd agree: "A person (Hinzman) is clearly not a refugee if his only reason for desertion is his dislike of military service or fear of combat."

The army was fine when he joined 10 months before 9/11, and being a macho paratrooper gave him status until on the eve of being sent to Iraq when he ran away to Canada.

True, he served in Afghanistan -- where he was refused conscientious objector status. Perhaps out of deference to his newly found pacifism, he was relegated to kitchen duty. Safe but unheroic.

No one is sure how many U.S. deserters are hiding out in Canada. Maybe 100, maybe 200. Interestingly, their lawyers and supporters tend to be former Vietnam draft dodgers.

But these guys today aren't draft dodgers -- a qualitative difference. There is no draft in the U.S. It's a volunteer army, like ours.

These guys are deserters, and there's a certain disdain for deserters. Even during Vietnam, a draft dodger was more acceptable than a deserter, which reeks of cowardice no matter how one sugarcoats it.

That said, as reported by the Wall Street Journal, Detroit Free Press and others, Hinzman's lawyer Jeffry House came up with a novel defence on the CBC: "We don't believe people should be imprisoned for doing what they believe is illegal."

Bicycle courier

Hmmm.

A poster boy for deserters, today Hinzman is a bicycle courier. It's a far cry from the university education he says he joined the army to get -- until the shooting started.

The "cruel and unusual" punishment he thinks he'd get if he returned to the U.S. would be at most five years in prison, but more likely one year. Neither very cruel, nor unusual.

Despite Canada's meek support for U.S. policy and our opposition to the war in Iraq, Canadians are generally admiring of their own military and not enthusiastic about deserters.

Canada, with Paul Martin as PM, is different from Canada when Jean Chretien was PM and his party striving to loot the till.

Martin clearly seeks to restore damaged relations with the U.S. Despite his verbal opposition to missile defence it doesn't mean a damn thing because, under NORAD, Canada is already a partner in continental defence.

Hinzman will be an anti-war hero to those aging anti-Vietniks who came here 30 to 40 years ago, and to the CBC which viscerally dislikes our military and revels in anything anti-American.

He can attend anti-U.S. rallies and ride his courier bike on our streets and live a sort of twilight life and never amount to much. But mostly he's a sad young man whose judgment is flawed and whose courage is questioned.

Not much of a legacy.

My very humble apologies.

I was working off of this Feder column a month ago, which I just dug
up again today:

http://www.suntimes.com/output/feder/cst-fin-feder251.html

Nowhere in the column does he actually mention that it'd be a Clear
Channel station. The assumption was made by me (and others) because
the lineup listed included Jerry Springer, and Jones/Democracy Radio's
Ed Schultz. At the time of the article, Jerry's then-new show was
solely a Clear Channel venture, and Clear Channel has an apparent deal
with Jones to clear Schultz on its liberal talkers.

Thank you for the clarification and the correction.

>In the just-out exctrapolated month of Feb, WOR beat WLIB nearly 3 to 1.

Again, old information here...what I was working on. A big deal was
made about WLIB with Air America beating WOR when they got their first
ratings book, and I'd been led to believe that though their ratings
certainly settled down from that "sampling" book, that they were still
ahead of WOR.

Do you have any time-slot breakdowns on this? i.e. is Franken beating
whatever's on WOR in middays, and is Randi Rhodes ahead of Bill
O'Reilly? It wouldn't sound from your information above like it would
be possible.

>No, it is not competitive with either, even WABC. It is highly directional,
>most of the power going ot to the ocean. It has to protect 1150 in Mexicali,
>so no signal towards the South, meaning the OC. It is vastly inferior to
>either station you name.

Again, I guess I'm wrong (that's sure spreading today...I wonder why I
even got out of bed). I guess the information I spew here isn't worth
the electrons that carry it. It's been a heck of a week for me...I
have learned that I'm full of crap.

Perhaps the word "competitive" was not in order here, though it's
certainly a better signal than the likes of WONX or WAIT in Chicago.

>Apparently the Chicago station is either WAIT or WONX, both... arf, arf,
>dogs like the "Dallas" affiliate.

Since they're apparently not hooking up with CC in Chicago, and didn't
in markets like San Antonio, they're once again looking at third-rate
signals. This can't be a good thing for them.

Of course, with the record I've been spewing here, that means they'll
end up on a 50,000 watter just to show what I write is incorrect.

No, DW has (as of the last time I hit their web site, a few months
ago) a hour long daily program targeted to North America, but only
for rebroadcast by their "partners" . Might be on WRN, or on the DRM
transmission out of Sackville.

They didn't make this comparison and explicitly said that. Twice. He (Robert or Richard Green, not sure which) said that we don't need to hear about the personal lives of public figures. This was about the controversial Hitler movie that shows his "human side" - playing right now in Germany. He only introduced the others to make the same point. It makes no difference to anyone if George Bush, Tony Blair or Donald Rumsfeld pat their dogs, tell jokes to children or whatever. He was decrying the tendency to make celebrity out of politicians and leaders. As if we need to know.

As for America bashing on the world stage, the unilateralism of the USA during Bush Jr's first term was sufficient to justify it. That "New American Century" stuff. He's changing this during his second term, but there's a lot of damage to repair on the world scene. I know half perhaps of Americans don't care about world opinion (given your past election's voting patterns), but there you are. And I know that Sept 11 attacks are a defining moment in your country,taken to justify subsequent decisions, policy and military intervention. The Sept 11 attacks are taken in context by the rest of the world and not as an aberration,whether that is right or wrong is another question. They are seeing things differently. What I like about SW is i get to understand how others think and feel, whether I agree or disagree.

No, President. Danny Goldberg remains CEO.

--
George Bush's War of Choice on Iraq is a totally unnecessary war.
Every life lost, every limb lost, every disfigurement, every
disability caused there is more blood on George W. Bush's hands,
and on the hands of everyone who voted for George W. Bush.

Im more annoyed with the seller protection. I sold an item and sent it only to have the payment reversed leaving me with no money or item.

I have sold about £200 worth of stuff on there with paypal taking about £15 and ebay taking nearly £40.

No wonder there making record profits!

I hope to see a drop in their rates soon otherwise I won't be able to continue.

Which is not true in any direction except towards Catalina Island.

The only comparison between a highly directional 50 kw on 1150 built on a
dry, rocky site and a non-DA one on 640 in an area of higher conductivity is
that both are on the AM dial.

In a car. But it is, for all practical purposes, a daytimer.

The articles I have read tell me that she does not have any awareness of the world around her and has not for many years. Consequently she is not doing something that you could not do. She is doing nothing - her doctors are keeping her organs nourished, but she is in a perpetual vegetative state. She has no functioning brain with which to sense the world around her let alone suffer from the loss of food.

If anything it is an example of how our ability to prolong basic biological processes has far exceeded our ability to maintain a minimum level of mental awareness.

When you sell something on ebay, it makes sense to send it with delivery confirmation or tracking - so if the person claims they didn't get it, you can show they did.

The BBC is the best Broadcasting company in the world.
All the U.S stations are run by corporate, suit wearing, white assholes.

And for your information (you dumb fuck) the IRA aren't out to kill the
British. You worthless shite.

If you had one intelligent braincell you'd realise you were wrong.

And as for posting all that shit about yourself, I don't care what you are,
or what you do, just post something thats fucking relevant for once.

aaahhh pfft

Did you tell Paypal about this when they contacted you?

If so, did they give any kind of response?

Also, even if you've left the buyer feedback, you can go back and leave a comment on your feedback indicating he reversed the paypal payment after getting the item and giving you positive feedback.

Regards,

Mark

Indeed, he does. He's improved since they fired him
from "Bongo Burgers." So far, he hasn't repeated his
performance of holding hamburger buns over his head
and yelling "Tha' ALIENS is commin ta get me!
They mother ships look jus like dez hare thangs.
I knowed 'cuz I got a Seee-Cur-Tee Clearance an'
I wuz in AREA FIFTY WON!"

I think it had something to do with the pesticide his
step-dad left over his bed in the tool shed.
The bag was leaking a bit.

There's a good reason why Europe is so anti American. Namely, they hate
America. This may be self evident, but the rest of the world really,
really hates America. Part of it is our superpower status, the fact that
we dominate the world like no empire ever has. We spend more on our
military than all the other countries of the world combined. Plus we

have most of the world's nuclear weapons. The rest of the world feels like the playing field is tilted, like Bush is using America's power as a blunt club to run roughshod over everybody else, and that the American people either don't care or actively support it. The world simply wants to be treated fairly, but they feel like America does whatever it wants and the rest of the world be damned, that the giant is raging out of control. I think that's at the core of terrorism, of Europe making an alliance with China, of Europeans and Muslims dancing in the streets on 9-11. Another part of it is a difference in viewpoints. The right wing Christian fundamentalist movement that is so powerful in America does not exist in Europe. Likewise, few Americans subscribe to the democratic socialist views so common in Europe. Europe feels like it has more in common with China than with the US.

> Telamon
> Ventura, California

My thoughts would be to see about designing new boards to fit the existing chassis, and then see about new features like reduced power consumption and computer interface for remote control, up or downloading memories or logging frequencies you listened to without adding them to the preset memories. The VLF could be replaced with a DDS that could tune in the current 10 Hz as well as 1 Hz to tweak SSb signals. Maybe add an input for a frequency standard for serious users so it's within 1 Hz at 30 MHz and a buffered IF out to drive an optional spectrum display. I worked on $10,000 to $80,000 radios and some of the older designs had been in production for over 10 years. Circuit boards went from through hole to surface mount, the Op amps were replaced with newer parts and overall tolerance of some parts went from 10% and 5% to 1% and .1% to make the boards interchangeable without a lot of extra work. Hard to find polypropylene caps were replaced with SMD ceramics and the overall power consumption went down.

The important question would be, are there many customers left to buy a brand new top notch receiver?

To test your theory, you would have to put Franken on a signal equal to that
of the Rush affiliate. Except for, maybe, Portland, this has not happened.
On the other hand, in Portland it looks like there may be a near tie.

The 'last word' as usual, is that you're a 'tard. Nothing new of course, but I figure sooner or later the 'word' might just soak in.

Now go hunker down, play with your doll, talk baby talk to it, maybe break out your crayons, colour some pictures and maybe play with your other toys.

Oh yes, and don't forget to tune around for that 'covert "go" signal'.

LMAO

Dan and Jim,
.
PayPal - IMHO Is So Easy To Use.
Plus the Seller Pays for the Service.
Note - eBAY 'owns' PayPal.
.
Western Union BIDPAY Money Orders are some what more dificult
to use. Remember - You The Buyer Pay for this Service.
But... Considering the Trip to the Post Office and the Cost
of a Money Order Plus a Stamp and Letter.
The Dollar or More Extra Expense is well worth the Money
spent when you can do it all at home in minutes and have
the WU System Mail the Money Order and send the Confirmation
eMails for you.

Hiya everyone, I am on the gold coast just south of Brisbane in Queensland Australia
Just bought my shortwave radio a Sangean ats 505 . I am surprised at how little I can pick up?
Anyone and good ideas to help me. I am lucky if I can get 5 stations in total

Thanks for any help you can give
I used to have an old Russian shortwave that I bought in England and was like a tank big CLUNK CLICK selector dial got great service off it but it died after 30 years

Im pretty new to all this though
thanks
Steve

Radio Vlaanderen International f/d "Koksijde" QSL card and sticker in 11 days for web report. This web report submission thing is kinda nice....it does get the report there reliably and saves a few cents in postage.

I understand they're stopping English services (if theyhaven't already). This is a far cry from the old Beligiese Radio en Televisie of the late 70s. They had great programing...

Course I remember when Radio Luxembourg had the best English service on AM back in the days of the cold war.... Kept me company on many late nights at the site.

My 505 is pretty sensitive off the whip. Overloads with external antenna.
The SW schedules just changed so you might not be listening at the right times.
DxAce just gave me a good site to find the latest broadcast times and target areas.
http://www.worldofradio.com/dxld5051.txt
When it's available the bc-a05.txt at http://www.eibi.de.vu will be very useful
and the same goes for English language schedules at http://www.primetimeshortwave.com

Many sellers will ship after Western Union confirms the payment is good
- so in that respect it's better than mailing a money order or check.

It also seems to be an easier system for international transactions.

I'm thinking about getting a MFJ-1020C active tunable antenna because I can switch it between my portable and my non-portable shortwaves.

I can't run a big old outside wire. I can't.

I understand this is a compromise, but has anyone USED this?

Comments?

Best,
Larry Loeb

There are just as many doctors that say she could be rehabilitated to some
degree. She responds to her mother and father. She smiles. She WAS MUCH
better than that before the alleged insulin injections.
She doesn't deserve to die. And as to the claims of her friends, they are
just as valid as her husbands claim that she didn't want to live like she
is.

Yeah, almost as convenient as her husband waiting seven years before yanking
her feeding tube the first time, claiming she said before her sickness that
she didn't want to live in her present state. Yes, how convenient.

Hi Larry. It's hard to believe that you can't get something as small as an H-800 Skymatch antenna outside, and that would result in better performance than any antenna you're apt to use indoors. The Skymatch is about 22 inches long and it's housed in brown PVC pipe. You can put it *anywhere*, and it will be an extremely quiet antenna provided you put it in a quiet place.

I won't recommend the Skymatch for indoor use, as it would pick up too much local noise. In fact, I wouldn't spend a lot of money on any antenna that I was going to use exclusively indoors, unless of course I had a large attic and could find a quiet place for it there, away from computers, TVs etc.

In any event, I haven't used the antenna you're inquiring about, but perhaps others have.

Best,

Steve

There have been so many stories that have alleged that one or another family member did or said this and that. The facial movement is most likely involuntary or some low level response...not the joy that everyone would like it to be. From what I have read they were devoted to one another. It is a sad case, with no easy choices. But with no chances for improvement and the doctors saying that she will never sense the world or people around her I don't see anothe choice. If he was as heartless as some say wouldn't he have turned over custodianship and the attending financial responsibility to the parents long ago?

cuhulin@webtv.net wrote in news:6424-42481D7C-142@storefull-3258.bay.webtv.net:

I have written one of my senators, Rick Santorum, explaining that this issue is the straw that broke the camel's back. The other Senator is fairly useless anyway, no sense in wasting electronic ink.

The Republican party has become a non-entity as far as I am concerned. They habitually fail to accomplish the items that they claim their party platform is all about (despite controlling the House, Senate and Presidency), and constantly succeed in passing bills that egregiously benefit big business (bankruptcy reform, protecting Americans from inexpensive Canadian drugs, rejecting a bill that sought to limit the amount of interest that Credit Card Companies can charge to 30%, etc.) How naive I have been, I actually believed that they stood for the conservative beliefs that they endlessly espouse. Not any longer, there seems to be 2 roads to hell, the Democrats, the quicker, and the Republicans, previously the slower, yet they have accelerated. Fortunately the Republicans advocate smaller government. (just kidding, this is obviously not the case either).

My wife and I watched the Brady Bill debate years ago on C-Span. The Democrats were in control of the Senate at the time, and the Democrats stated that the voting on the Brady Bill would end PROMPTLY at the scheduled time. Well, that time came and the Democrats didn't have sufficient votes to pass the Brady Bill, yet they allowed the voting to continue despite their prior protestations concerning ending the vote punctually. When the Democrats realized that they didn't have the votes to pass it, and were unlikely to get them, they conceded the issue and stated that they would renew their efforts when the Senate reconvened after the Thanksgiving break.

Imagine my surprise when the headlines the next day proclaimed that the Brady Bill was passed. Come to find out the Dole had negotiated the passage with them after the voting was final. Great work Republicans. Issue after issue, they feign support for this or that, knowing that they will fail, or that they courts will strike the law down as un-Constitutional before the ink dries from all the signatures. This way they can maintain the appearance of being pious, all the while maintaining the same beliefs of they people that they excoriate in public.

With this Terri Shiavo issue, they again proved their value, that is that they are just about useless unless you happen to be a major corporation.

5086. Slinky Jr. on a Hula Hoop = A Loop Antenna + The MFJ-1020C {Pre-Selector}

Newsgroup: rec.radio.shortwave
Date: 2005-03-29 00:11:35 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1112055095.388727.63440@g14g2000cwa.googlegroups.com>
Source record: 14621

LL,
.
Consider the Slinky Jr. on a Hula Hoop Loop Antenna
to use with your MFJ-1020C as a Pre-Selector.
<http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2741>
.
1. Buy a Medium to Large Size Hula Hoop.
.
2. Buy a Slinky Jr.
.
3. Twist the Slinky Jr. on-to and around the Hula Hoop
to 'form' a "Loop" with the Slinky on the Hula Hoop.
.
4. Use two Plactic Wire Ties to Secure the two Ends
of the Slinky Jr. about 1"-2" apart on the Hula Hoop.
Also use about 3-5 more Plastic-Wire-Ties to keep
the Slinky Jr. evenly space around the Hula Hoop.
.
5. Use a short piece (6'-10') of RG-58 or smaller
Coax Cable with a PL-259 Plug on one end as a
Feed-in-Line for the Slinky Hula Hoop Loop Antenna
to your MFJ-1020C.

6. Connect the non-plug-end Center-Wire and the
Outer-Shield to the Slinky Hula Hoop Loop Antenna.
- The Center-Wire to one end of the Slinky Jr.
- The Outer-Shield to the other end of the Slinky Jr.
.
7. Place the Slinky Hula Hoop Loop Antenna "ON"
the Center (Side-to-Side) and Middle (Top-to-Bottom)
of an Out-Side Facing Window.
.
8. Connect the PL-259 Plug to the External Antenna
Input of the MFJ-1020C Active Antenna {Pre-Selector}.
Note - Remove the small Whip Antenna for the
MFJ-1020C Active Antenna {Pre-Selector}.
.
9. Connect the MFJ-1020C to your Radios.
.
RESULTS : You have a Shortwave Listener's (SWL)
Slinky Hula Hoop Loop Antenna (SHHLA).
1. Being "ON" the Window is as close to being Out-Side
as you can be while still being In-Doors.

This will generally give you the Strongest RF Signals with
the Lowest Noise that is available to you In-Doors.
2. The Loop Antenna is about as quiet an Antenna as you
can get for Noise Reduction.
3. The Slinky Jr. has about 85 Turns with a Diameter of
1 7/8 Inches for a Total Wire Length of 29.3 Feet.
4. The MFJ-1020C is being used as a RF Amplifier and
Pre-Selector for the Slinky Hula Hoop Loop Antenna to
be Fed into your Radios.

A good idea, that.
But it misses the point.

Wifey don't want no cables in her living room. Of any sort.

[Yes, I know. Move. But then, the computer area (where I could move the
radios) is such a local source of RF it would defeat the entire purpose. I
already tried moving things there just because I could throw some wire out
the back window. It just sucked dead rabbits through a straw big time.]

So, should I gamble the $80?

Message-ID: <1112059401.009395.24510@o13g2000cwo.googlegroups.com>
Source record: 14634

I just tried for 10 minutes to get the R2000 newsgroup to
display any messages. With winning user interfaces like this
how can Yahoo survive.

And I thought the new and deproved Google Beta was a POS.

I dropped 7 Yahoo RF groups because I just couldn't get into them.

And this was on my "main" PC, my laptop and both of my "work" PCs.
At first I thought that maybe becasue at home I am running a very
hacked version of Windows 98SE, with many dll/exe/vxd pulled from
Windows ME.

But my primary work PC is a Windows 2000(yuck!) and IE and Mozilla
acted the same way. My other work PC is a Windows 98SE, stock
(or as my IT friends call it, virgin) with all of the latest security
patches.

So I am glad that dxACE and some others can read and post, but untill
they return to a working interface I just don't have the time to waste
trying
to read and post to "dead" user groups.

I intend to keep the r2000 group alive and check evey couple of days
for a few weeks, and >IF< they fix their defective trash I will rejoin.
If not I will
pull the plug on the R2000 group as well.

One group I really miss is the RFH antenna group. Full of interesting
information. I considered changing from read on line to Email
notification,
but my employer would not acept that amount of non work related Email.

Have you thought of capacitive coupling of a random wire?

Basically, you run an outdoor antenna, and hook it up to a couple of square inches of aluminum foil you rubber cement to the outside of the window. Then you run a wire from your radio to a similar sized sheet of aluminum foil in back of the outside one. The signal passes through the glass from one sheet of foil to the other.

The Skymatch is an active antenna for HF use. If you hook it up to your transceiver it'll fry very quickly.

Your best bet for a cheap 2 meter ham radio antenna is probably radio shack. They'll probably have something that'll let you test the radio for under $25.

I just tried http://groups.yahoo.com/group/OcalaFreecycle/ which is
my local freecycle group and it loaded in about two seconds. It may be
a bandwidth problem with your ISP, or they were doing server maintenance
on the machine hosting your group.

http://groups.yahoo.com/group/Short_Wave-and-Amateur_Radio/ took about
four seconds to load. I'm on a cable modem but I'm using a five year
old computer running Win ME

Thanks for the added perspective; I'll have to look for some more
writings byPeter Worthington. It is refreshing to see Canada
differentiating between those who fled in the Viet Nam era to escape
draft versus those who enlisted and didn't figure it out that being in
the military means you may have to fight in a war.

Well, to me it is pertinent because, traditionally, and legally, these matters have been decided by family, family physicians, and clergy (and still are today, every day, all over the country, without opposition from the vocal minority). Where there is a conflict, as in Terri Schiavo's family, then the parties go to court and judge has to make the decision, based upon who has the legal say. The hypocracy arises when Dubbya makes statements like "It's always better to err on the side of life", whatever that means. He didn't say that when signing the Texas law, and he never said that when giving superficial review to all those death warrants he signed as governor.

OK,Radio Shack has antennas for 2 meter Transceiver Radios? There is a Radio Shack store just across Highway 80 from me at Metrocenter mall. www.metromalljackson.com and another one about a mile and a half South of me.I happen to have a thick Radio Shack catalog that the store at the mall gave me about four years ago,I will dig it out and take a looksee.The red wire and the black wire on my Transceiver each have a little round bayonet style plug on them and I think Running Dog once said I will need a dummy load too.Any information about that stuff? I don't know the first thing,,,,, yet,about how to properly hook up my 2 meter band Tranceiver and I sure don't want to fry it,assuming it is in good condition now.

Brian, where do you get this? She "responds" to the walls as well as her
mother and father. In three hours of video tape, her random, reflexive
actions showed up for what they really are. And there are not "just as many
doctors that say she could be rehabilitated", those doctor are in the
minority. And a lot of those doctors haven't ever examined her. The
evidence, as presented in court over the past seven years, is that her
cerebral cortex is gone, replaced by fluid, and brain scans show no
conscious activity. I wish it weren't so. But it is, as far as anyone can
determine.

If this is the choice Americans are being faced with in our political process, then we're doomed. Both sides care only about political advantage and not about the actual lives involved. Neither side cares about the actual problems highlighted (the divorce laws that require the informed consent of BOTH man and wife to grant a divorce, and more broadly the pervasiveness of eating disorders among women in America, since that's how Terri got in this situation) but only about their own narrow agendas. Each side has the unwavering support of exactly half the country. There doesn't seem to be any room for a third party with a different agenda (even Britain has three political parties, most other democratic countries have far more) even though one is desperately needed. The problems of the country go unnoticed while Terri gets all the attention. Did you know that the second anniversary of the start of the Iraq war was last week, while everybody was arguing about Terri? Not even American media mention Iraq anymore except in passing. The BBC has

totally forgotten about Iraq too. The only ones still following the Iraq war in either domestic or foreign media are the Cubans, mainly because they're jumping with glee at America's struggles in Iraq. The insurgency grinds on while people argue about Terri. The US is still vulnerable to terrorist attack. ABC World News Tonight in the US DID have a story about America's dependence on foreign oil, another problem facing the country, but that was only a brief segment. The rest of America's problems? Persona non grata in the minds of the people while they argue about peripheral issues surrounding Terri. By the time people notice the real issues, it will be too late.

Any comments on the SW reception quality and other features
of this radio? I saw it listed for $75.00 and hence the temptation!

try your local Sony store: they might not keep them in stock, but they
can order one in for you. I bought mine at a sony store, and it is an
excellent little radio.

Surface mount is the way to go and 1% tolerance parts are inexpensive
and good enough for a radio. Todays ceramic capacitors are a good value,
very stable and long lived. The problem is the analog IC's for
amplifiers, limiters, led drivers and other functions that go out of
style in a few years time.

> The important question would be, are there many customers left to buy

The $64,000 question.

Peter Worthington is a good guy, and he hit it right on in that column.

http://www.vac-acc.gc.ca/general/sub.cfm?
source=department/mincom/bio&recipient_id=88

Minister of Veterans Affairs Commendation

Peter Worthington
Toronto, Ontario

The Toronto Sun's founder and Editor-in-Chief, Mr. Worthington is a Veteran of the Second World War and the Korean War. Mr. Worthington was an Air Gunner in the Second World War and an Intelligence Officer in the Princess Patricia's Canadian Light Infantry (PPCLI) in Korea. He is recognized as one of the foremost writers on military matters. His column, well-beloved by the Veteran Community, reflects the popular mood of the moment, as they are always informative, frequently entertaining and eminently readable. Over the years, Mr. Worthington has been a powerful voice and advocate of Veterans' rights and benefits. He was a member of a delegation to Korea in July 2003--a pilgrimage organized on the occasion of the 50th Anniversary of the Korean War Armistice. A champion of Veterans' interests, he has also covered major events, reporting from numerous hot spots around the world. Mr. Worthington has and continues to make an outstanding contribution to the perpetuation of the memory of the sacrifice and contributions of all Canadian Veterans, and brings to his writings a unique knowledge and understanding regarding the role of Canada's Veterans in the Korean War.

It's a great little radio for the price, small and sensitive, and it has SSB function as well. I have one and recommend it highly.

Hi gang,
Sometime ago I stumbled on a broadcast down around 5-6MHz of a woman speaking in what I can only assume was an effected voice that I would describe as sing-songy along with drawn out words. She was going on about some kind of religious stuff so I presume it was on one of the domestic religious SW stations that have taken over the bands.
Does anyone recognize this description and where I might find her again. She was quite entertaining. :)

Thanks

Bob

Sure does! Sounds like their or WWCR using a crappy
Icom mic or similar. (grin) That and their audio
feed keeps dropping out every 20 seconds or so.
I quit listening at 02:20 as it was getting downright
annoying listening to the utterly crappy audio.

(yeah! good ole WWCR comes thru again eh folks?
I mean you know it's gotta be REALLY BAD when
Bro. Stairmeister what broadcasts from a cow lot
and James "chicken-coop" Lloyd sound better that
you do on shortwave!) Hopefully tomorrow evening's
b'cst will be more entertaining and not sound like WWCR
is using string and a pair of Maxwell House coffee cans
for it's program feed.... :)

You might be able to get more for less at www.universal-radio.com .

Really, what you want to do is, find a local ham radio club. Just
ask a couple of the folks there, and one of them will have an SWR
meter (If that's a concern), and I'm sure they will be happy to test
your HT to make sure it works fine.

That's a good find you turned up!

73,

Steve Lawrence

Maybe the profit meant fifty centimeter high waves instead of fifty millimeter. But those were supposed to be off the coast of South Carolina, not Sumatra. Maybe the profit has fled the US ahead of The Law and went to Ache because he heard that there were a lot of dark meat 8 year old girls there.

the idea would not be to design by committee, but rather to define a feature set, and then a spec set.

the truth is, as i would be doing the design and paying for additional devleopment tools, boards, etc, i guess the buck would stop here....but if there aren't enough interested people in helping to put it on track and answer questions about design decisions and directions, this would just end up being another man's radio (which is alright for me) , or another man's enhancements of an older radio....

someone suggested basing it on the r8....what i was talking about was forgeting about all the previous radios in specific, and using your vast collective experience with all those radios and the invested years and years of sw listening to figure out what you really want....

my intent is a dx radio without compare and without the cost....which is the reason for the laptop....displays and display related design changes, software/firmware updates, these are alot easier with a processor and a display interface already designed....it figure this is going to take me about a year fulltime to get to a working prototype, maybe a bit longer. i intend to cheat and use micro basic to craft the display (there will be no signal processing on the laptop, and an optical link to prevent xtalk). that means you can play and have fun making your own pretty pictures. i was also thinking of talking to friends at the mathworks so as to have a set of matlab modules for display processing.. it may not be pretty but it'll work well....

Decent reception, image problems, small sound. If you're in this price range, buy the 1103 instead. Or, go a little higher for the YB-400.

Here's one reputed to have cost in that range. It's an Applied
Communications (aka Norlin or Aiken) Sr-2150.

<http://users.adelphia.net/~msholden/SR2150Applzoom.jpg>

It's a wideband receiver that covers from 20mhz-1200 mhz with no gaps.
It has a signal monitor that uses a plasma display. You can tune to any
signal that turns up on the display very quickly. It weighs about 70
pounds, and it was built by hand. The engineering costs were probably
spread over very few units.

It's also fun to use. (Though the cooling fan scares the heck out of
one of my cats)

I understand they were built for the NSA.

Thanks Steve Lawrence.The PC Warehouse System 486 desktop computer that I bought at the Goodwill thrift store about seven tenths of a mile South (South is always best) of my doggys couch last week,the same afternoon I bought my $2.00 Transceiver,last night I took the case off of that computer and the latest date I saw in there is 12/94 (December 1994) So,it is too old to use like it is,but I can hook it up and download a free version of Linux into the computer and play with that and the computer does have a CD drive and a big floppy drive and a smaller floppy drive.I think I can get some use out of the computer anyway and if my $2.00 Transceiver turns out to be ok,I won't feel so bad about the $25.00 I paid for the computer.I think I will buy a 2 meter antenna and a dummy load thingy from the Radio Shack store after I ask some local Hams in the Jackson area about my 2 meter Transceiver.I am sort of anxious to try it out.Sometimes in the mornings and evenings I hear a few local Jackson area hams talking when I listen to my radio scanner. cuhulin

The Osterman book says it's double conversion.

The prices in that book are somewhat out of date, but they felt it was a one star (value rating) radio and worth $60-80.

For comparison, the same book indicated the range for a used R-1000 was $280-$300 and they gave it 5 stars for value. The R-2000 was $380-$450 and 4 stars.

Hey hi Mark!

Long time no talk to. How have you been?

I just picked of these QR-666's for $81 tonight. It includes the original
manual too. I like the looks of it. Can't find any reviews for it but I'd
like to try it out.
It can be hooked up for car use. I like playing with some of these older
radios.

Custom built telemetry radios to track deep space satellites.
L-3Com/Microdyne RCB-2000 dual digital receiver with combiner built in,
ruining embedded NT and fully programmable for everything except which
microwave band they received.

Not solid gold, but a lot of expensive gold plated parts. I worked
with engineering to get it ready for the production floor, then
programmed the boards and setup the DDS boards. I worked on these
radios for the last year I was able to work full time.

Great little radio for the price. Got mine off of ebay and enjoyed it.
As having owned both the 1102 and the 1103 I would go for the 1103.
Some can't stand the ergonomics of it or the "fake" analog lcd. Never
bothered me.

One thing I really liked on the 1103 that the 1102 doesn't have is a
line-out jack. The 1102 only has headphone out. When I tried to record
from it the volume was really low. Can't go wrong either way though.

Paypal weren't very helpful. I just got a load of automated messages,
saying that it will take 30 days to clear.
I didn't even get an explanation, as to why it had been stopped.

Paypal definately some serious international competition. They're starting
to monopolise the market.

Wow! You're using China as a model for human rights? (Isn't that what
Socialism is supposed to achieve?)

<Not that I buy into that...>

I really hope, and pray that Europe doesn't find itself more in-line with
Chinese beliefs than those of a representative republic.

If what you said is true, it is extremely frightening not just for America,
but the whole world. I'll not debate anything, as I don't care to. I've
other things to do with my time that are more precious to me, but as a
historian, and lover of my own personal liberties, I find this to be the
beginning of a horrific dark age.

I took RHF's advice on this and built a modified version for use indoors, using 50 ft. of wire after the toroid section was wound. For indoors I replaced the weight with an alligator clip. It works great.

I agree with your assessment on the 1103-- I too have the 1103 and the
ergonomics, while kind of odd, don't bother me during the actual operation
of the radio. It's really a good performer.

I've never had image problems with my 1102 though, as a previous poster
indicated. Isn't the 1102 a dual conversion radio, which should
theoretically keep down the images?

Source record: 14730

Last night, 28 Mar. 0350z to signoff at 0400z Radio Voice of
Vietnam, s3r3 between heavy QRMN on NC125 with 156 ft off center feed
antenna in upstate New York. Male and female voices talking
(Vietnamese?) way down in noise until signoff in English. Frequency
slighly down band from 2.400...estimate 2385.
Does this correlate to any published schedule and frequency. If
so was it direct from Hanoi or a relay ?

Several people have asked me where they can get their
very own "Acehole Doll." The person responsible for
this nasty but oh-so-cute doll is:

STEVEN R LARE
733 Myrtle Ave.
HOLLAND MI 49423

Home phone is in the 616 area code,
but not even a real "acehole" would post someone's
home phone on the net, would they?

Write him any time to get your own talking
Acehole Doll! But remember-
It says stupid shit like:

(zzzzziiiiiiiiiipppp).....

For most browsers you select "If sender contains" and type
Google.com into the filter.

I'm trying to find out why "nfilter" (newsproxy.exe) isn't working
for me. Its easy to take out a whole domain with Netscape's built in
filter but I have some idiot following me around different newsgroups
trying to pick a fight. He creates new IDs every couple days to escape
simple filtering but claims its because he has a different ID on every
computer. I had his ISP block so he started creating fake domains and
top level domains. So, its either trap his garbage or forward the
messages to his ISP so he can complain that people are trying to get him
kicked off of the net again. He claims I had him kicked of the net when
I didn't even have internet access. A very disturbed man.

Hollow state boatanchor National NC-125, recently realined with
HP-8646B sig gen.
2385+455 = 2840...probably not an image. 2385/2 = 1193... call
it 1190...possible 2nd harmonic of domestic US Vietnamese station, but
Google seach on domestics didn't find anything near that, and the
signoff was definately RVoVietnam. QRMN from forced air, gas fired home
heating ignition made listening really tough, but the signal had some
QSB and sounded *really* far off and multibounce. Propagation on the 90
meter band was among the best I've ever heard last night, so I went down
to 120 meters where I dont usually hear anything. I was unable to Google
any time/freq listings for RVoVietnam...just propaganda about
programming. If I'd been using the Sat800 I'd at least know the exact
freq, but I was just band cruising with the bedside NC-125.

Nobody is interested in your daily geography lessons about Jackson and the surrounding area. The Jackson Hamfest is always held in February dimwit!

You live in that squalid west jackson area by the metrocenter with all the jigaboos don't you?

If Jeff is like most hams these days, he won't be able to fix anything short of a broken shoelace.

Get a life, learn to quote so we know what in the hell you are referring to and buy a real working radio!

You have to be the dumbest asshole who ever posted here on usenet.

As long as it's in good working condition you probably did OK. Having a manual
is nice - especially if it includes service information.

Having it capable of running from battery power is always a good thing too,
though you've also got the Lowe for that.

Regards,

Mark

Sure...I owned the later version, R300 with the SWL bandspread dial. They are double conversion on all but the lowest sw and all of the mw band. Double conversion doesn't help much with the images, which abound.

Still, it is a fun radio to use and it looks like it should have tubes inside. The crystal marker allows accurate (by pre-digital standard) tuning. And it has two filters that actually work, although they are a bit sloppy for ssb work. After a few hours behind the dial, it does become a bit tedious and you realize just how far receivers have improved. It's younger digital siblings, the R600, R1000 and R2000 would be much easier to use and would perform much better. They will not "look" like a glow-in-the-dark radio however.

If you are in the market, don't pay much over $100.

I'm so glad to hear you're doing OK. I was a little worried about you for a while chap. I didn't see any posts from you like before and wondered what happened.

OK so $81 was not high then. It looks from the picture and manual someone just socked it away in storage.

Hi Pete

How can that be? You're saying the circuitry was designed that way? They
couldn't do double for all the bands??

Yes Yes!

I found a picture of it lit up in the dark. Nice cool green meter display.
All I can say is try to find one of these somewhere. I bet it wouldn't be
easy. I think this radio will entertain me more then then the $81 I hope.
Thanks

Lucky

I'm curious about how it was done, but it was not uncommon to have
receivers in the old days that switched to double conversion only
on the highest band(s).

Back then, the normal IF was 455KHz, this was before crystal filters
in the HF range became available (and once they did, before they became
common). It was pretty easy to have good image rejection at the lower
bands with that IF frequency, and given that one did have front
end tuning tracking the local oscillator, there was little incentive
to do things differently.

But at the higher bands, 10MHz and up (the exact frequency being
more determined by how the receiver breaks the 3 to 30MHz range into
bands), image rejection became more of a problem. On the really
cheap receivers, it pretty much disappeared, as you'd often see
in reviews of such receivers. A receiver like the National HRO series
had two stages of amplification before the mixer, and the extra tuned
circuits apparently helped to keep out images.

So double conversion was added on the highest band(s). A stage of
a combined mixer/oscillator was added one those bands, or more
commonly there was a stage of 455KHz amplification that was
turned into a mixer/oscillator on the highest band(s). The first
IF would then be in the 2MHz or so range, and that extra stage
would drop it down to 455KHz. This counted on having enough selectivity
at the first IF so the 455KHz images were knocked down enough.
The Hammarlund SP-600 did this (and benefitted especially since it
tuned right up to 54MHz), and a Heathkit portable comes to mind too.

Why not make it double conversion through all the tuning ranges?
Maybe because the extra conversion always adds problems, so if
you only have it in place when actually needed, you cut down
on unwanted spurs. Double conversion gives two chances for
images, and a mixer is more prone to overload than an amplifier,
so if you don't need the extra conversion for image rejection,
the extra conversion is a liability.

The other common scheme for double conversion back then was to have a receiver that tuned a fixed range, and then toss in a crystal controlled converter ahead of it to add the extra bands. In some cases, you had single conversion on one band, because the fixed tuning range would be a useable part of the spectrum. A classic example would be a receiver that tunes the 80meter ham band, 3.5 to 4MHz. For that band it would be single conversion. But to tune the higher bands it would be double conversion, with the bands converted first to that 3.5 to 4MHz range. Receivers like this had the advantage that since the tuning was for only one range, it was worth making a good linear oscillator and a good dial. Which is where receivers like the Collins R388 came from.

Double conversion became a different thing once crystal filters in the HF and even VHF range came along. Up conversion was then happening and that has certain advantages. Once the first IF has a decent filter, you will get good image rejection for the second IF, and since you have a relatively narrow bandwidth at that first IF, overload of the second mixer becomes more difficult, since it's only seeing a small portion of the spectrum. And then LC oscillators became synthesized to a crystal reference, and it no longer mattered where the oscillator tuned.

Michael

> is up to the individual. It has to do with whether schools are
> suitable for passing on cultural or mythological beliefs as fact, which
> they are not. That is what shortwave radio is for ;-)
>
Well said.

To extend your last paragraph, it should be noted that science is not contrary to faith, and is not about "disproving" religious ideas. Science and faith are, by definition, completely separate paradigms that have little to inform the other. The mere existence of science does not minimize the importance of faith, and vice-versa. However, ideas like "intelligent design" attempt to explain notions based on faith using the parts of science that fit, and throwing away the parts that don't.

Science cannot be used to prove or disprove the existence of a divine creator. If god or gods have created the universe, space and time, and all the natural phenomena that people have observed in a scientific way over the centuries, there would be no way for science to factually determine this.

However, this was never the aim of science, so it should not be expected to do so.

Theories about the nature of the universe are constantly revised as we learn more provable (or disprovable) facts. This does not change observed phenomena at all.

To make a more apropos comment with respect to this newsgroup, we do not understand, in some fundamental ways, how radio waves and electricity function. We have many theories about the fundamental nature of how radio waves propagate and electricity turns RF into sound, and we've developed a huge body of evidence that has well-understood technical applications (i.e., a shortwave radio.) However, if one examines the theories of electromagnetic physics there are still questions regarding how it works at some fundamental level. Theories still abound on how, exactly, these things we call electrons (the nature of which is still being discussed) "move" (or don't move) through a conductor.

However, even if these theories change, or are revised, or contested over the years, this does not change the fact that our radios still work the same way we expect them to. We've learned a lot about radio and electronics in the last century. This does not change a whit how well your crystal radio set works.

The notion that radio, or even evolution, is somehow "just" a theory is not the point. Theories are frameworks upon which we hang observed behaviour in order to better understand it. Even if the theories are revised to take into account new observed behaviour that contradicts some aspect of the theory, the worlds still works in the same (poorly understood or not) way.

This, in fact, is the great strength of rational though, of which science is the best example.

Thanks for listening.

That makes perfect sense. But, if they did it right the first time, there
would not be any added problems. Back in 1970-75, they were still in the
dark ages of radio :)

Thanks
Lucky

Well,

I listen to him sometimes. Let's see how good the "666" radio brings him in.
Perhaps this radio let's you hear only what a person is really thinking. It
only broadcasts the truth. Now I'm kind of scared about it myself. The
headline for this radio in the ad only said "Kenwood Shortwave Radio"

If you didn't check the listing manually, you wouldn't find it. It didn't say "QR-666"
or "Pre R-300" I wonder what the black box brings?? :)

Lucky

The both the 666 and R300 show up on Ebay periodically. To make room for new acquisitions the R300 had to move on to other users.

I owned one for about a year and enjoyed it for what it was. If you have never owned a band spread receiver with a crystal marker for dial alignment, then you are in for what I would call both a treat and a challenge. It is fun to learn something different, even if it is not new.

The bandswitch can be problematic on those radios. Mine required periodic cleaning and precise positioning to function on the lowest shortwave band. A Kenwood technician told me that switch was a potential source of problems and that there were no replacements. Have fun, and be sure to post your impressions after you've played with it a while.

5250. NRD 525 / Sherwood SE-3 MKIII For Sale

Newsgroup: rec.radio.shortwave
Date: 2005-03-29 18:48:31 UTC
From: Ken Wilson <kg4big@yahoo.com>
Message-ID: <1112122111.637387.283460@g14g2000cwa.googlegroups.com>
Source record: 14788

I am offering my JRC NRD-525 & Sherwood SE-3 MKIII combo for sale

The 525 has the following options installed. CMK-165 VHF/UHF board
,CMH-532
RS-232-C Board....board only no cable, CMH-530 RTTY Demodulator board,
& 1 khz
filter in the narrow position.

The serial # on the 525 is 38211. It works great &
looks good. Not mint but very good. Comes with manual...copy in a
binder & the 110 volt power cord and Whitepaper review.

The SE-3 MK III is in as new condition & works great.

Serial # is 4550454-A3. Comes with manual..7 pages & the power supply.

I will sell for $900.00 shipped lower 48 UPS ground.

I would prefer to sell as a pair but would sell the SE-3 seperate after
the 525 sells.

$500.00 for the 525 shipped UPS ground. $400.00 for the SE-3 shipped
UPS ground

Source record: 14789

The DE1103 is a dual conversion radio and it has plenty of images.
Most of the 6mhz, 7mhz and 9mhz and 15mhz bands reappear 900khz down.
You can count on almost any strong signal popping up in the wrong
place.

Someone posted a link to a summary of moderately priced receivers on
Radiointel. One of it's erroneous points was that receivers with
single conversion should be automatically excluded while those with
double conversion were assumed to provide protection from images and
were therefore much better radios. In the real world it ain't that
simple.

The DE1103 provides good value for the money, but it's price means that
some shortcomings remain. I think a similar assessment applies to the
DE1102.

Don't laugh!

A retail product such as an "Acehole Doll" if one was actually
produced, would likely be a big hit with the 18-27 year old
demographic market, and would likely make the creator
a multi-millionaire overnight. (remember folks, ours is a country
that produced Pet Rocks, Cabbage Patch Kids, Garbage Pail
Kids Trading Cards, Whoopie Cushions, the VCR, the Apple Computer,
The Windows Operating System and similar contemptable consumer
products which made their creators very rich in a relatively short
time.....)

I agree and I believe we now have the answer as to why AA needs Jerry Springer. Even in the midst of his freak show he manages to present a sense of logic and reason. I think if AA wants to make it as a national network they need to tap more talk show hosts and less angry stand-up comedians.

Yes, a pretty good article.
http://www.villagevoice.com/news/0513,hentoff,62489,6.html

If Terri was on death row things would be different. And of course then, the ACLU would be fighting for her. Judge George Greer is a murderer.

Hi Guys
Im really disappointed that I buy a Sangean 505 shortwave radio for $200 Australian dollars and this morning I could not pick up even one station?

I live on the coast in south east queensland at the gold coast australia, my house is placed half way down a steep bank with good clear views.

I have read http://www.geocities.com/n2uhc/portablewire.html and will give it a go!
what is overload and why do you think Im not getting any stations
When I press auto search it stops at many stations but all I hear is rumble noise, if you know what I mean

I do appreciate all help,

regards
steve

Let's cut the fun stuff and get to business, shall we Steve?
You know, I've been around the net since the Eighties,
when it was all BBSes and such.

In all that time, I've used my real name.
I've been easy to find- no problem.
I've had some tussles with people,
and some of them had a screw or two lose.
But never, in all that time, has anyone been so low
as to call my wife and little children and harrass them.
Not once, until you.

You have a long history of being a miserable prick to people
on the net, Steve, along with multiple times you've sworn
you were going to "turn over a new leaf."
So much for your word, huh?
But guys like you, who think they're smarter than everyone else,
always over-reach, Steve... Always.

And what's with that cowardly phone call to me?
Didn't you have the back-bone to tell me who you were
and have it out? Who knows- we might have come to
an agreement. But I guess sneeking goes along
with lying and scaring women and little children.

Tell ya what, Steve-o: You do whatever you think best,
and I'll do the same. OK? I think reasonable people
will get the idea of what kind of person you are.

David S.

Did I harass them? I simply asked to speak to you, 'tard boy.
Your daughter or whoever gave me your 'work' number.
Simple as that. You can portray it any way your little 'tard boy brain wants to.

> You have a long history of being a miserable prick to people

Cowardly...?

> Didn't you have the back-bone to tell me who you were
> and have it out?

You didn't tell me who you were, 'tard.

> Who knows- we might have come to
> an agreement. But I guess sneeking goes along
> with lying and scaring women and little children.

Lying? I asked if you were there... they said no. I asked if they had a number
where I could reach you, 'tard face, and it was given.

> Tell ya what, Steve-o: You do whatever you think best,
> and I'll do the same. OK? I think reasonable people

There may be a chance you have a defective receiver. Even during the middle of the day you should pick up some stations on the higher frequencies. When I was in the Philippines I used to pick up all sorts of stations from all over Asia & the Pacific.

> I have read http://www.geocities.com/n2uhc/portablewire.html and will give

Yeah the guy who put up that site is a pretty neat guy! :-)

> what is overload and why do you think Im not getting any stations
> When I press auto search it stops at many stations but all I hear is
rumble
> noise, if you know what I mean

Overload means your receiver is being overloaded by strong signals, and this results in certain stations being heard all over the bands, no matter what frequency you tune to. Or, it means that strong stations will show up in places they shouldn't be. Overload is usually a problem with a high gain antenna or too much amplification. A short wire (15 to 20 feet) connected to the whip as outlined on my page above should not overload a portable receiver.

I usually don't use auto search on HF due to the characteristics of propagation, fading, etc. Plus weak stations will probably be passed over. I'm not sure what you mean by a rumble noise, but if the station is strong and all you hear is rumbling then I'd suspect a defective receiver.

20-30 feet of wire, should be copper wire, speaker wire will do. Hook it up to the "whip antenna", that is, the metal retracting rod antenna that extends out from the top of the radio. It would be best to hook it up to the end of the antenna where the little knob is. Overload is when a signal is too strong for your radio's circuits and creates false signals or "images" all over the dial. Since you're in Australia, overload should not be too much of a problem, is what Dan is saying. From your other posts, it sounds like you live at the base of a hill on the beach, your house pointing southeast. This is not a good situation to receive signals on a small portable radio just using the built in antenna (the "whip"). That's why you need to hook up 30 feet (about 10 meters, I think) of copper wire to the end of the whip antenna and run the wire outside your house and hook the other end of the wire to a tree or a wood fence or anything that's not metal. Do you understand a little bit better?

Does anybody remember "The Last Word", a little computer chip hooked to
a speaker that would say things like "Fuck you!" and "You're an
asshole!" whenever you pushed a button? They were quite popular about 20

years ago. How about the Furby, the hottest toy of 1998? The only people in the world who come close to matching Americans in dreaming up garbage that people go apeshit for are the Japanese, and they're a distant second.

One other thing 'tard... I must have scared the everloving shit right out of you as with the post I'm responding to you changed your sender name from David Stinson to arc5@ix.netcom.com.

I suggest that you stay hunkered down in your apartment and stay tuned for the 'covert "go" signal'.

Frickin 'tards... there's a factory out there that keeps turning them out.

Oh, pleeez, Steve-o. I'm posting from a Google account since
I'm not at the home computer. I thought you were supposed to
be smart? But then, it takes a certain kind of man
to call anonymously and scare a little 9-year-old girl.
Go ahead and deny it, Steve; we both know what you did,
and my daughter knows what you did.
And now the people familiar with the way you treat others
know what you did, too.

It takes a certain kind of man to do that,
and it takes another kind to support him for doing it.
Not to worry, though; I'm sure someone will come to
your rescue. What else can they do, having associated
themselves with you?

By the way- who was it that posted who's address first?

Scare? I asked to speak with you 'tard... I asked to speak with David Stinson.

Then I asked where I might get in touch with you...

The number was freely given...

I'm not sure who was sending the original post about this radio, but I just ordered this radio through SonyStyle (www.sonystyle.ca) last Friday (25th) and should be receiving it this week sometime. According to Sony their main warehouse is in Whitby, Ont and that is where they are shipping it out of, so apparently they do have stock. Purolator makes bulk pick-ups there 1-2 times a week. Puro said once they pick it up, I should get it the next business day, since I'm also in Ont.

Not sure if this helps the original poster.....

If your kids are easily scared by someone asking to speak with their father (asked for by name), then I think you've instilled some type of paranoia into them which further corroborates my theory that you've got a lot of problems!

ABOUT - Portable "Roll-Up" {Reel-Up} Shortwave Antennas :
http://groups.yahoo.com/group/Shortwave-SWL-Antenna/message/2761
.
These Roll-Up {Reel-Up} Portable Shortwave Antennas can be
used In-Doors or Out-Side with most AM/FM Shortwave Radios.
.
These Roll-Up {Reel-Up} Portable Shortwave Antennas can
be Clipped-on-to the Radio's Whip Antenna.
.
Or, these Roll-Up {Reel-Up} Portable Shortwave Antennas can
be Plugged into the Radio's 1/8" External Antenna Input Jack.
.
These Roll-Up {Reel-Up} Portable Shortwave Antennas are
about Twenty-Three Feet (23') Long when fully extended.
.
NOTE - In general these Portable Shortwave Antennas provide
a One + Plus S-Unit Improvement in the Signal to the Radio.
.
.
Portable Shortwave Antenna - Frequently Asked Questions (FAQs) :
.
Question # 1 - Will using a Portable Shortwave Antenna
with my 'portable' AM/FM Shortwave Radio make a difference
in my Reception. [Does It Work ?]
* Answer * YES - Usually using one of these Portable Shortwave
Antennas does make a good improvement in the reception of the
Radio on the Shortwave Bands. HOWEVER - Depending on your
location you may also pick-up as much RFI / EMF Noise as
Radio Signal when you use one indoors.
.
Question # 2 - Does the Portable Shortwave Antenna make a
good Travel and Camping Antenna for use with my 'portable'
AM/FM Shortwave Radio ?
* Answer * YES - This is what it is Design-To-Do and it
does a very good job as a 'portable' On-the-Go Travel
Antenna to be strung-up in Hotel Rooms or from a Tent
to a Tree while Camping. Compact-Light-Weight-Efficent
.

running dogg <run@ning.dog> wrote in news:4248c577$1_1@127.0.0.1:

In my increasing disdain for Republicans, I have little doubt that some (many) of them have exploited this situation largely since it is diversionary.

I have a friend (surprising, isn't it), that was a hold out concerning his dedication to the Republican party. We both are registered Republicans. Having had more than a few arguments with him since the Iraqi war began, I gave up arguing with him concerning these issues (basically, Republican politics), since I value his friendship more than I need to endeavor to try to convert him to my views. I was astounded today when he said, quite unsolicited, that he will never vote for another Republican again. The Terri Shiavo has been the breaking point for him as well.

I think he is beginning to feel as I do, that the Republican Party is incapable or unwilling to support those facets of their constituency that are largely responsible for their success at election time.

> By the time people notice the real issues, it will be too late.

It is too late, far too late. The Shiavo issue was simply another step on the way to the gallows, another knot for the rope, anything to keep the condemned from considering their fate.

thanks, but I went online Jan 1999. since then I had a year's gap
where I was too sick to do anything so the internet and telephone line
were shut off to cut expenses. I'm on full disability these days but I
still like to work on old radios and test equipment.

Seems we have about FOUR "situations" with different individuals all at the same time.

1. The Terry Schrivo case.

2. Johnny Cochran

3. Jerry Falwell

4. They are considering putting a feeding tube in the pope because he is unable to swallow. ....Even as they remove the feeding tube and leave Terri to starve and dehydrate to death. Wonder if they'll do the pope the same way? Probably not. His "spouse" is not pushing to have him cremated.

Artaud, there are a lot of us that would agree, except that the other real, electable alternatives have been even worse. That's why you see more and more people describe themselves as "conservatives" rather than "Republicans."

I agree that the Republican party is due for a real housecleaning. The trick will be doing it without losing the branches of govenment to liberal Democrats.

He has a history of calling people's employers too. He's an unbalanced loon who should be prohibited from owning firearms, along with the thousands of rounds of ammo he collects for a rainy day. The authorities will have some explaining to do when the 'Ace' finds a high tower near a local school yard. He should have been locked up years ago.

I hate to break this to you. You guys lost the war. They're no longer
your property, in fact we wrote an amendment in to the Constitution to
make sure of that. I know that since Mississippi didn't ratify it you're
gonna claim that it doesn't apply to you, but it does. It's been 140
years since Lee surrendered. GET OVER IT!

Isn't ten centimeters equal to 100 millimeters? The Profit predicted
fifty millimeter waves. The actual wave was TWICE the size that the
Profit predicted! Oh my god, Jeezus must be coming soon, the devastating
50 millimeter waves have hit!

You responded to my post - My wife isn't interested in radio, but supports my interests. (of course I support hers too)

In fact back when I decided to put an antenna a couple hundred feet away from the house and explained how it would be done I got a call from a contractor the next day saying she'd hired him to dig the trench, install the pipe and run the coax.

One thing I didn't think to suggest is he could run his coax through the walls and attic - that's what I do and it looks much more finished.

http://www.vov.org.vn/docs1/english/index.html

VOV 2: Economic, Social, Cultural and Education programmes over medium
and short waves on frequencies of (549, 558, 702, 729, 738, 783 and
1089)kHz and (9875, 5925, 6020)kHz with a daily airtime of 18 hours.

Maybe a harmonic from 1089 KHz or an image in your receiver from it?

My only concern is that he has had kids. Hopefully they will turn out OK
but if they do it won't be because of their father.

I'd ask for Mom next time and let her know about her husbands postings
to the news group. Maybe a frying pan thrown in the direction of dad's
head would straighten things out.

Try this group for a few dozen more names. The maroon sometimes has five or six personas going in the same thread. He calls himself names. This is the beauty of the Canadian Health Care system. He could never afford all the psychotropic medication he is now addicted to in the US.

alt.binaries.crafts.pictures

Oh. yes..they steal copyrighted material in that group, defrauding the legitimate creators of their rightful income.

mike

==========
My 'GymyBobism' collection...updated daily:
==========
some '#' bracketed text added for clarification
all cut and paste, NO modifications of ANY kind
100 % Pure GymyBob. Accept no substitutes!

We need less morons like another clone of Moron II here.
My fifteen minutes of FAME!

Everybody is a complete moron except me

Moving energy and creating it are different things.
(Gimmie Bob and the first law of thermodynamics)

It doesn't matter what you say...it's wrong!

My bozo bin is getting rather large with all the swollen heads here in it.

Your car alternator will charge your car batery up to 15.4 volts in cold weather.

NTSC redefined it slightly off 60Hz so that power supply ripple will move on the screen (two slightly black bands that scroll up/down your screen

Portable humidifiers do not typically use heat to evaporate the water. The heat from the room is used.

You sure spent a lot of time trying to convince me you don't knwo what I am talking about...LOL

You babies are a blast like RC toys to play with!

I am the only one that can be right

Voltage does not indicate state of charge well.

At 11.6 volts a 12v battery is about 50-70% charged still.

Polish solar panels are what americans called "flashlights"

We have to consider the DC/DC inverter in between that can act as a step up for current since the batteries cannot use the high voltage from the panels in full sun. ##unaware what flooded cell batteries do to solar panel output voltage##

There should be subsidies for solar panels but control of prices to boot.

Propane will disapate and freeze when it evaporates.

Gasoline is not nearly as volatile as hydrogen.

When I use pot I imagine everythging is perfect.

Perhaps you should only spoeak on things you know something about.

Many people have browsers that economize the download

Just another threading error creating confusion

Learn how to thread or sit back and watch for a few years.

Try to stay on topic and on thread too bean brain.

Perhaps try Outlook Express or another browser that knows how to thread posts.

Ohhhh. that's how it works here. If you put the boost to as many concepts,ideas and posters as possible it makes you a better person?

Bottom posting was the was in the 70s and 80s before threading browsers were available cheap like OE

Another Forte Agent person that doesn't understand threading.

You use Mozzilla and haven't learned to thread.

Try Outlook Express so you can understand threading maybe.

I have been noticing many threading errors everywhere on Usenet lately.

People with OE don't seem to have the petty problems with subject
lines changing, intermingled posts and downloading binary files with mixed
posts, random pieces and many other problems all the nonOE people have.

Bottom posting has been obsoletely by threading browsers.

Forwarding does not include headers.

Call your damn ISP and tell them your browser is multiple posting.

90% of the people in America have never operated a computer.

Sorry, My browser cuts off long posts to reduced bandwidth on my 300 baud modem.

Let's say youre solar cell was trying to put out
14.3 volts DC and you stuck a 10 ohm meter in series with a charged 13.8
volt DC battery.

Your troll was too obvious. Try to engage the mark in conversation first so
there is, at least, some stake, like friendship for the person listening.
When the friendship is well developed then attack. Not too obvious at first
or you will lose your audience. This will enhance your troll points.

I think outside opinions are worth much more than sales hype from the
company that made the product.
Referring to *factory* charging specifications for the batteries they make
This is good to know. However I tend to go by the manufacturer's information.
They provide the warranty.

This is power grid induction through capacitive proximity

You can get fooled with another ground in the house finding it's way back to the
transformer neutral.

A thought I have is rain water from a roof on a three story home through a
micro-turbine.

Setback thermostats only work efficiently for small differentials, dependant
on the time duration.

Breakers are good for one time usage of one fault and then they need to be
replaced for any warrantied usage.

If the breaker interupts a fault, it should be replaced.No warranty will
honoured after that.

This newsgroup is full of selfproclaimed experts like you.

I don't have a link at this time

There are no hydrogen molecules in water and the oxygen in water isn't flammable either.

Water is inert and contains no energy to be used. Get some basic chemistry first.

Quite simply put, for some of the boneheads here.

Most conclude their isn't many knowledgeable people here. I do.

NiCads and NiMh batterries are designed to take a current charge forever.

Oh yeah, I can charge a battery and use it six months later fully charged. The nicads will be cooked because you keep them on charge, just in case you need them but when you remember them six months later they are cooked and won't last 5 minutes in the camera.

Hopefully his AGM battery is larger than a AA NiCad that could absorb this charge current forever.

It takes a complete idiot to deny they can short out all by themselves. Three, loose in a bag can short themselves out.
referring to AA batteries doing the physically impossible

Did they have electricity back in 1994?

I have been around so long with this stuff I believe I invented the diode in 1941 but I am not familiar with the solar panel usage requirements of them. (no P & N substrate explanations please. I wrote the GE manual...LOL)

NOTE: do not pass ground wires through metal holes or cable clamps with two screws on a metal surface.

There is **NOT*** enough energy in a lightning bolt to power your house for more than an hour...if that. Do the math.
The figures escape me but let's say it puts out a roughly MWatt of power for 100 nanoseconds?
100 x 10-9 x 1 x 106 / 3600 (sec/hr) = 0.0027 wH
oooops.... Wouldn't light your home for a 1/2 second.
OK..OK.. multiply the figures time 100 or 1000. Now it would light a 100W bulb for 1 second.

The IEEE-232 standards were never followed or known by many.

Fossil fuels are still renewable and being cxreated as we speak.

Children are venerially created.

If you want to discuss this then fine, otherwise go fuck yourself like your mother did.

Can you let go of my dick before it explodes on ya, goofball?

Petroleum is not related to Natural gas.

I would rather work at my $100/hour job than at chopping wood for hours to save $3/hour

I have no license, I wire and inspect other's wiring for a job and work for a medium size electrical utility.

My workplace has been throwing out huge digitizing pallettes (like 24 x 36" units) ## in alt.sewing.mach-embroider ##

As a design engineer of transformers for 10 years I happen to know you are full of shit.

I am a Protection & Control Tech by profession and have experience with control systems

BTW Watts / AC voltage does not equate to any amps.

Try spelling "bus" correctly! Maybe your brain will start again. Probaby not, you fucking loser.
Referring to the correctly spelled word 'buss' as used in real electrical terminology
http://tinyurl.com/5ctml

X10 signals are transmitted just after the voltage waveform zero crossing. This is in order to avoid conflicts with SCR and Triac peak waveform switching spikes from load type devices such as lamp dimmers.
control module misinformation

Besides when they on any line they will pull of the meter as a disconnect point.
speaking of power line guys miles away removing YOUR electrical meter for THEIR safety

The majority prefers top posting.

Not one of your suggesters listened to what the OP requested...LOL

Get your tear ducts flushed by a knowledgeable optometrist.

Not many materials have the huge exponential resistance/heat curve aluminum does. Overload doesn't make it glow like copper...it flashes and explodes.

A bathroom fan motor would never push hot air down ten feet or cold up ten feet.

Bathroom fans have a hard time pushing 55 cfm through a 3-4" pipe 20 horizontal feet. They are made to vent smells and humid air horizontally only.

Why not spend the money on a contract with the grid company and get an exclusive line to your house and never have brownouts.

Usenet rules dictate top posting for readability

Many cell modems are set up to filter bottom posts out.

Cell modems do not cut off anything.

What security flaws.
##referring to Outlook Express##

10 pounds per gallon Imperial. That gallon is totally unique to the US....ooops..I think all gallons are unique to the US now.

The standard Imperial gallon the whole world used weighs 10 pounds exactly.

The copper isn't worth more than 5 cents per pound. It is classed a mixed copper and nobody wants it.

Hey moron! The copper is considered "mixed" copper and is worth about $0.02 per pound, if he seperates it all.

Just don't ever lose weight. Toxins are stored in your fat cells.

Did you know, **NO***, I repeat ***NO*** death has ever been related to PCBs?

Insulated square copper wires from a dry transformer are not 99% copper and take a lot of work to remove the insulation.

I have tonnes of insulated copper wire if you want it. I think you could almost have for the picking it up. How many bins can you take per year

50 lbs? We have it by the bin full. Mostly #6 to 650 MCM. I beleive you would have to leave a bin and then pick it up full later to compete with the current scrapper.

Can't this tranformer be used by somebody to generate a second 120V from a single phase 120V inverter? It sounds pretty beefy.

BTW: once you knock the wedge out of the coil form the laminations will be easier to get out. This keeps them from buzzing until the varnish and other impregnations go into it.

All you guys have a bad Christmas or Jewish and didn't see Santa or something?

Run each signal twisted with a ground for noise. RD twisted with gnd as a pair, TD twisted around ground as a pair etc... This means signal/logic ground not power ground or case ground, if they are different. Do not connect the other ends of the ground conductors.

Tar pitch in a flourescent ballast does ***NOT*** contain PCBs and probably never did.

Religion is not genetic or even herodigious

I believe the warmest part of the lake is just below the ice. As the water frezes it rises to the top and joins the other ice formations.

Gel cell won't cut it when it comes to putting out 100A or more. They cook in one spot and the rest of the electrolyte doesn't circulate fast enough.

There is nothing standard about USanian measurements. They changed their sizes to avoid trading with the rest of the world. This worked for a few centuries but the rest of the world moved on to the metric system to avert the confusion the US caused.

Ever put your ohmmeter (do I need to explain an ohmmeter also?) across a capacitor? It measures infinity after charging to the supply voltage because the electrolyte is an insulator.

Electrolytes are not conductors of electricity in a capacitor.

If the electrolyte conducted it would be a resistor.

I doubt they are 4 farads. More likely 4 microfarads uf.
referring to 4000mfd caps

Sometimes it is an ego boost to have these so-called "professionals" come and beg for information because they can't our toys do what the good guys can but I would never hire them given a choice.

I have never had problems running RS232 at 19K2 through 14kV switchgear so far but I use twisted pair and sheilded cable combos and observe allt he good grounding techniques etc. The other engineers always want to ground both ends but in an area with 10Kampere faults that isn't a good idea.

Try rereading what I posted and try a basic English comprehension course before you make a complete fool out of yourself again.

Do you measure altitude in degrees? Many aeronautical people would disagree with you.
referring to solar azimuth/altitude thread

My house is filled with motion detectors. They don't all operate lights. They mostly signal my house control computer and it decides what to do and when.

Enlighten please (like it really matters...LOL)

I will hand stitch my embroidery before I would pay that kind of money...LOL

A 50Hz transformer needs double the iron a 60Hz transformer needs for the same VA capacity.

Does it test CTs with real current or just voltage?

It doesn't really matter where the secondary current comes from, secondary exciting or primary current exciting, the voltage developed or excited across it will be about the same.
talking about an OPEN circuit CT transformer

High voltage spikes want to keep going at the end and this is where your saturating core transformer core is located behind the fuse.

Moving a kill-a-watt unit around is like using it on somebody else's house and telling the person's load.

oooops. A flourescent with a filament?
not knowing how most fluorescents start up

You are a stupid basterd.

Ever considered anxiety medication? Chest pains for a man is a classic symptom.

When confronted with many websites stating the otherwise he won't address the issue but repeats his crap again like a child stamping his feet.
Oh, the Irony!

What are you doing up at this ungawdly hour? I just got finished embroidering about 10 items, including a flight bag for golf clubs.
in alt.sewing.mach-embroider

I just love women with front loading bobbins.
in alt.sewing.mach-embroider

I doubt a 6 needle machine would be faster than a 1 needle machine unless you do repetitive patterns.
in alt.sewing.mach-embroider

I had many problems with this and damaged my machine a few times. It was the needles. Find ones that have very little "hip" bump around the eye of the needle.
in alt.sewing.mach-embroider

I have found doctors absolutely ignorant and totally obstinet on these kind of issues.

I put my first child on Ritalin for a year or so when quite young. It beat going to prison for beating him black and blue.

I made a big mistake and should have "drugged" all of my children the same.

Once again you are an ignorant asshole disguising your lack of confidence

I did the chem.cut medication stuff for a few years with my first child and then found Naturopathic Doctors using homeopathy to get more lasting relief.

Homeopathics saved me thousands of dollars for operations I did not have on my children

Accupunture worked for my 1 and two year old children for ailments after the medical doctors could do nothing for.

Placebo is a completely natural cure for many ailments.

Polio Vaccine? They stopped giving that one long before HIV was invented.

You have no idea what you are talking about and either does anybody else here.

See if you can replace it with a thermal acting unit. They have a rachet on a shaft that holds thew contacts closed.
confusing motor overload with breaker

What are you doing in my group?

Milk is just plain poison for humans.

I am not a chemist but I know that cow's milk calcium molecules are a huge irritant to human digestion and usually results in calcium deficiencies

See an accupunturist for the pain and circulation
See a chiropractor to keep the structure good.

See a naturopathic doctor for the chemical imbalance.
See a medical doctor for a some poison that will make her life shorter.

Even an honest Doctor will take yoy they arte totally ignorant of nutrition.

The medical doctors will play the time game and probably just let him die after removing half his organs because they may be a problem.

Some things mankind should just not eat too much of and it isn't meat typically and this may not be consistent for all people.

Do not listen to the stories of addiction. Yes, they are tough to stop but so is insulin for a diabetic. I have stopped taking mine and it wasn't that bad but after months of regressing I chose to return like the other half the population.

Make sure your wrists are well warmed up before putting sudden jerky movements to them.

Make up your mind before you mouth off like the usual Internet piece of shit.
This is a rough group and if you had followed the usual recommendations you would have known that and have nothing to say about it.
in misc.kids.health, alt.support.breast-implant, misc.health.alternative

Bad practice to ground yourself when working on electronics. It increases the chance of injury or death by electrical shock and also increases the chance of static discharge to the circuit chips. Ground is a potential too.

It may not be your browser. The news server you use may not have that
header information in the overview. My wonky news server does not
present a good deal of the header in the overview for new posts so I
see stuff that I have filters for anyway unless the post are more than
three days old. All my filters work if I don't read the news group for
more than the three days then but I read it most days so some filters
don't work.

I've complained to my provider and they have seen the problem but
apparently are unable to fix it.

http://www.forbes.com/intelligentinfrastructure/2005/03/16/cx_ld_0317bpl.html

I had an idea this was coming.
"t is compelling technology that could provide meaningful competition to cable and to broadband service providers for digital subscriber lines. But that might not even be the most interesting thing about BPL. What's groundbreaking is that utility companies are, for the first time, using modern technology like BPL to automate critical functions and manage their networks. "

If BPL is used for communications to control critical functions, this brings in the awkward situation that legitimate users of the HF bands could be in trouble for operating their licensed radios and causing interference to infrastructure critical to national security. This also means that shortwave listensers will probably have little recourse.

Yes, Im receiving lots of signals but not music or speaking just a loud rumbling like the sound of an aircrafts engine

Now that I've had a chance to examine the site, you're correct; I'm disagreeing with you. www.newsmax.com is a lousy excuse for a news source. Personally, I prefer my news to come from sources that hide their biases a little better than that. I haven't seen such a collection of ignorance since the last time I googled your posts.

And for the record, Jesse Jackson can kiss my ass. He's one of the worst of the scum-sucking politicians taking advantage of this. He waited until damned near the last minute to make a fuss, just for the political leg up he thinks this might give him. Where was he a week ago? He's not going to be able to do a damned thing, but he'll sure make the claim that he tried his best.

As for putting critters to death more humanely, you're missing the point. (Now there's a shock.) By letting her go this way, we're giving God one last chance to work a miracle, and save her and everyone else in the same boat. If we administer a lethal dose of something, well...we've killed them. But if we let God not act, then it was His divine will that they died. Wouldn't you agree, cuhulin? <eg>

My guess is that somehow the receiver was picking up the relay out of Sackville...
They still using 6175?

A harmonic from 1089...? How would it propagate? At least so as to be audible
where he heard it, frequency wise.

And just to complicate things, as if they are not already sufficiently
complicated (e.g. the Navajos keep Daylight Savings but the Hopis,
whose reservation they surround, go with the rest of Arizona and don't
and the most likely medium wave DX catch in Arizona is Navajo) the
countries in the Southern Hemisphere which have summer time are going
OFF summer time.

And then there's Israel where the exact dates of summer time are a
struggle between the orthodox, who feel that summer time encourages
desecretation of the Sabbath on Saturday night and the secular who
feel that summer time conserves fuel.

Just grasping at straws. My best shot is the transmitter had a 2X or 3X
spur.

The web page lists 6165 on VOV4.

They broadcast on a number of medium wave and short wave frequencies. If
this is at the same transmitter site maybe they have a mixing problem.

I have one of those little Radio Shack suction cup microphones and the wire plugs into a tape recorder.I have an RCA six hour digital recorder too.wal mart stores sells some telephones for about $48.00 that can record converstions for 15 minutes and they have a built in clock too.For quality recording assurance,of course.I keep my damn phone unplugged except for when I want to use it.I hate telephones,except for my antique telephones and I like them.

Yes, I understand that... but the question would still be then how would it propagate if the mixing product was from a transmitter site in Vietnam? At that time there is no darkness path from Vietnam to his receiving site to facilitate reception on that frequency.

I'm still betting on Sackville... and a receiver fault.

Aha! Sackville has had various mixing products in the past...

Here is my report of one back in 2003:

Recently a Sackville transmitter mixing product was found on 3530.
This a result of their relay(s) between 1100-1200. Radio Korea on 9650
and Radio Japan on 6120. 9650 - 6120 = 3530 (Steve Lare, Holland, MI,
Drake R7, R8 and R8B, swl at qth.net via DXLD 3-225 Dec 14, via DXLD
3-232)

So, it could be something similar to that if one can find their usage of the freq's
to back up the math.

Oh yes, if the OP can find out what the exact frequency he is hearing VoV on in that
frequency range then it will make things much easier to track down.

Big deal.....yawn....

HDD DVD is nothing new. The broadcasters have nothing to worry about as millions and millions of viewers will still tune in and watch the commercials.

Your could change the date of this story to 1980 and replace HDD-DVD with VCR and you'd have the same load of baloney.

$500 million to has-been Howard is retarded though. I wonder if they did this to keep XM from swallowing them up. Sounds like a "poison pill" strategy.

Hi Jim

I'm glad to know other people in here have put him on ignore. I got sick and tired of his abuse and depressing posts.
He thinks the world is here for him to ridicule and abuse, but, the joke is on him. He does this to keep from thinking about himself and who and what he really is. He's knows this better then anyone else.

I'm shocked he called this guy's little daughter up and scared her. This shows just what he's capable of. If he did this to me, it would be the last time he tuned his
radio in...

Oh really, 'tard boy? The fact of the matter is I didn't scare his daughter one bit. I simply called and asked to speak to David Stinson (And I didn't specifically call the daughter, 'tard. I simply called his home phone.) Daughter said he was at work. I asked where he worked and if there was a number at which I could reach him. Daughter told me where he worked and gave me the number.

By the way, the daughter sure didn't sound like she was 9, more like 13 or 14.

After that exchange the mother came on... probably figured I was a bill collector or something, I don't know.

Now if they're that scared of a phone call then they all got big problems!

After that I called the work number, and the person on the other end of the line did not identify himself. I posed as a Nextel Rep and asked how I might get in touch with their head office, the individual on the other end looked for a moment and gave me that number. End of conversation. At that point I had no idea if I had even spoken with David Stinson.

Source record: 14892

I was in my local Best Buy a few days ago when I found these GE UltraSonic 2.0 speakers open box for $12. I decided to try them out. Boy was I surprised.

These speakers are superb IMO for SSB and speech programs. They have ZERO bass and treble. What you hear is pure clear sound. When you adjust the tone, notch or other touch ups, you really can hear the changes you made. The only bad part is all the other garbage comes in nice and clear too.

But if your frequency is clean, or your rig can clean up garbage well, it doesnt make a difference. So far I coupled them with my R75, Lowe 150 and NRD-525 and they sound great. No muddy sound at all. You know how you must wear a pair of headphones sometimes for those really weak SSB signals? With these speakers you can hear everything. They are great for the price.

Here is one auction on Ebay for them. Some of these sellers only charge 1 cent for the speakers or $1, but shipping is $10 or $12. They are worth it. Try a pair and see the fantastic price/performance. Great value for your bread. Also, they sound so real and surround. They sound doesn't seem to come from one direction but from all over. Very lightweight too.

I forgot to mention they cost $23 new in Best Buy. If your BB has them you
can try them first. So for the $10-$12 they go for on Ebay are worth it. BB
is so overpriced.

Hi I am thinking of parting with my Yaesu VR5000 receiver, it is in
very
good condition and excellent working order, complete with printed
manual,
software version V1.7 (new)

please visit this site for specifications
etc.....

http://www.yaesu.co.uk/amateur/receivers/vr5000/vr5000.htm

and also

http://strongsignals.net/access/content/rr_vr-5000.html

I am open to serious cash offers or trades for other scanner/receiver
etc
please email me with questions/offers, digi photos available on request.
cheers
Roger

What about military, maritime and government uses of the HF bands? If big utilities start relying too heavily upon BPL for their communications, and use of the HF bands interferes with this, then Hams won't be the only offenders. Uncle Sam will be first on the list.

If you spend a lot of time on SSB, you will not regret having one of these. I have no connection to this auction or this seller. I just bought one of these units not long ago and really like it. It's surprisingly effective at eliminating 'white noise'.

Well, I'm sure they will notch aeronautical and military freqencies. Perhaps even HAM services. However, I am sure that Shortwave broadcasts will be a casualty--after all, what is left after you notch the rest? I can see angry SWL's getting charged with terrorism after they pick up a second hand CB radio and use it to knock the BPL services off in their area. BPL is a defacto spectrum grab.

Morning Steve

I was just looking at that unit earlier today! I'm going to go with the
599zx or the new Clear Speech speaker.
The MFJ DSP is not too bad from what I've heard about it but I'd rather go
with my first two choices. So you have this exact unit and you like it??

How so? That was an honest appraisal of the conversation.

You can portray it anyway you want, and based upon your monitoring of 'covert "go" signals' I guess you'll put your own little spin on it.

> If I'd done what he did,

5426. Buyer's Question - SRIII vs. S350

Newsgroup: rec.radio.shortwave
Date: 2005-03-30 14:24:10 UTC
From: radiodude20@yahoo.com
Message-ID: <1112192650.254626.130670@f14g2000cwb.googlegroups.com>
Source record: 14814

Hello. I've been hanging around for a little while browsing the NG, reading opinions about different radios lately. I'm in the market to get a radio that will primarily be used for AM DX'ing. I've got only $100 to spend and I wanted to hear from those who had both the Superadio III and the Grundig S350. I know in a sense this is comparing apples to oranges, but I've heard many good things about both radios.

I know this is a shortwave group, but I figured if I chose to get the S350 that I could listen to shortwave. I've done research on both radios and know what they have and what they don't have. Some of these questions have a couple parts to them. Here are the questions I have:

1) How is the sensitivity on both radios on both AM and FM? Is one radio a good deal more sensitive than the other, or are they fairly close?

2) How is the selectivity on both radios on both AM and FM? Is one radio a good deal more selective than the other, or are they fairly close?

3) How good is the quality on both radios? I mean such as the "feel", the knobs, the switches, etc.

4) I live on the east coast and I primarily listen to 650 AM WSM, and mostly to the Grand Ol' Opry. One of the main reasons I'm getting a new radio is because my basic (VERY basic) radios drift on 650 AM, very badly. How would both radios handle 650 AM WSM, if anyone listens to the station?

5) How good is the S350 on shortwave? A little drift doesn't bother me. I can put up with even a tad of moderate drift.

6) I've heard that the S350 could be found some places selling for $50, does anyone know of any online resellers that are selling the S350 for $50 EXCLUDING eBay? The reason for asking is that if I could find one for $50 or $60 I could then afford to get both radios.

7) I've also heard of one main problem with the SRIII. I've heard that the dial is very inaccurate. How true is this and it is a huge problem and can it be fixed?

8) Overall, with all things considered, if you could get either radio, which one would you choose and why?

I also know that these radios don't have presets, PLL and other extras, but that doesn't bother me. I've also considered other radios in the price range and it came down to these two, mainly because they're both

analog radios, which I like better than digital. I also realize the S350 has analog tuning with a digital readout.

I'm sorry for all the questions but I figured this was the best place to come to ask this question. Thanks for reading. :-)

Jim

I was refering only to international broadcasts on the 120 meter
"tropical" band. Last night, 0403z to 0409z there was *something,*
two male voices in Spanish with music interluded *way* down in the
grass, 2x3, on 2440.0 khz with my Sat 800 on the same antenna. Wicked
QRN.

I listen a lot to the 2 mhz marine traffic as I'm something of a
USCG fan as a result of being the originating station of a mayday on
2182 in Cheasapeake Bay in 1977. Coast Gaurd Radio Annapolis and a
crash boat crew out of Easton MD busted butt to help me get medical evac
of a man overboard. Marine band traffic can be really interesting.

If you read the tech reports- and have followed BPL for several years, you
will see that notching has proved ineffective.
Reading the professional journals, it also appears that BPL is an
inefficient technology, to be swallowed up by better answers.

So I'm supposed to pay for something I won't use? The only thing I would ever listen to on Sirius is WSM and I am listening to it right now on the computer. I spent what Sirius would cost along with a second phone line and dial up internet to get broadband internet and basic cable service for the same price. I only spend a couple hours a month in my truck and a few more at the grocery store or doctor's office. Please explain the logic of your statement.

Glad to try. The marker is used to align the main and bandspread dials and thereby give tuning accuracy around 5khz. The bandspread dial is most useful with ssb stations and locking in the frequency an am station is broadcasting on. For casual broadcast band scanning the main tuning dial is sufficient.

The marker generates a tone when both dials are tuned to the same place. To use it you set the bandspread to the beginning of the band in question then tune around the same location with the main tuning dial until you peak the tone. When you change bands, just repeat the process.

For bands not shown on the bandspread dial you can use the dial as a fine tuning control or use the 0 to 100 scale.

The owners manual has a very good explanation. Be sure and post your impressions once you get the receiver.

Good to hear that William. 2182 KHz is still used a lot, in spite of the
fact that the U.S. has never declared a Sea Area A-2 that would mandate it's
usage. The majority of coastal-Atlantic Mayday traffic is from fishing
vessels in New England waters. The stations listed below either make regular
Marine Safety Broadcasts or come up on 2182 KHz for SAR cases, or both:

Glad to help. The crystal marker can really improve dial accuracy on those older dual dial radios. The much smaller Sony ICF5900 was one of several other analog radios that employed the marker too.

I get as much enjoyment out of learning how to use an older radio as I do from tuning into stations. An admitted knob twister at heart....

Dear Jim,

You're not going to like my answer as it does not truly address your questions, but, owning all three versions of the GE Superadio and appreciating their positive attributes, nonetheless I have "retired" all but one which I sometimes use strictly for local FM (performance of which is very good). I do not own a Grundig S350 but, having seen several in local stores, I am not impressed. Personally, I would never buy one (even with its fantastic looks and sound quality). In my opinion, it is more style than substance.

The radios are probably "okay" for MW ("AM") DXing but if you can just "swing" a few dollars more you could buy a radio which is far better than both: the Sony ICF-SW7600GR which you can find for about $130.00 (from J&R Music World, among other dealers). You would find that this radio is just as sensitive on MW's as either of the two you mention and, with its digital readout and, especially, its synchronous detection circuit, it just "blows" away those other two. No kidding.

You're correct that "memories" are of little importance to many of us, but PLL is not an "extra." It is a virtual necessity for DXing.

You asked about selectivity: the Sony is FAR better that either the GE or the Grundig even though those two have two "bandwidths." The Sony's synchronous selectable-sideband circuitry allows you to eliminate selective fading distortion (which, have you ever noticed, ALWAYS occurs during station ID! ;-)) and to also pick the sideband with less interference. (For example if you lived near New York which has a strong station WFAN on 660 kHz and you want to listen to WSM 650 kHz, you would get a lot of "splatter" from 660 on 650 making listening difficult if not impossible with the GE and the Grundig. However, with the Sony, you could switch in the sync circuit to LSB on 650 and virtually eliminate 660. This is an example only; I do not live near New York nor have I presonally every tried that particular frequency, but I have done the same thing with other stations.)

Another beauty of the radio is that you can supply it with certain accessories as money allows. To get even better "sound," the Sony's weakest point, you can buy a cable from Radio Shack to run the sound from the line output through your stereo system. Very inexpensive. Then the sound is limited only by your stereo. Or you could buy an amplified (computer) speaker set, a somewhat more expensive option. To improve the MW reception, you can buy a Select-A-Tenna (or the similar Terk) which works inductively (does not require any wire hookup); putting the Select-A-Tenna and the Sony ICF-SW7600GR on an inexpensive "lazy susan" you can really "null out" co-channel interference and/or boost

reception of very weak signals. (Note that the Select-A-Tenna would also work well with the GE and the Grundig and you CAN attach a moderate long-wire antenna to the GE and, within reason, it works well with little overloading. I do not know how the Grundig would work with a long-wire on MW. You CANNOT physically attach a long-wire or other antenna for MW reception to the Sony, but, as the Select-A-Tenna works so well, that is unimportant, in my opinion. The Sony's antenna connection is for short wave reception only.)

These "options," which, as I said, you could purchase at your convenience, are not 100% necessary. You may find that, for your purposes, the radio alone is all you need.

Plus, of course, the Sony is a very good performer on short wave even with just its whip antenna. (A simple "clip-on" wind-up wire antenna is packed with the radio and sometimes offers a bit of improvement in reception of SW.) If you do decide to pursue short wave listening, the Sony can handle a fairly good external antenna (especially good, though sometimes hard-to-find is the Sony AN-LP1 "collapsible" loop antenna, which works very well with the radio and is convenient for travel as well).

It is my advice to you (for what it's worth) to try to save just a few dollars more and buy the Sony. It is just a much better radio than either the GE or Grundig and far more flexible in operation. I believe the performance and pleasure you derive from it will more then make up for any financial sacrifice you may need to make.

In addition, the Sony's quality of construction, at least in my experience, is much better than either of the other two radios. There is nothing that can be done to improve the GE's dial inaccuracy and its mediocre construction quality may loom large. (The Grundig's construction quality appears to me to be equally mediocre.)

Please pardon this long answer which didn't really address your question. You can gather that I am very positive about the Sony ICF-SW7600GR (and rather negative about the GE Superadios, with all three series of which I have had extensive experience).

Frankly, I regard the Sony as the best small portable radio being manufactured at the present time.

At its current price, it is nothing short of a bargain.

All my best wishes to you,

Joe

Check the thrift stores and junk shops and fleamarkets and local newspapers online and offline in your area and you might find a better radio for much less money.The second batch of GE Super Radios are not as good as the first batch of them,or so I once read somewhere a few years ago.I think the second batch of them are made in a different country.Same as those windup radios that were originally made in Africa and then they started building them in China and the quality went to pot.

No chance!
You have to get another radio therefore.
The PCR1000 is on par with a Sony 2010 on shortwave. Not too bad for a
widerange receiver.
If you really want to get into shortwave get a dedicated SW-RX.
The tentec RX320(D) does a nice job there if you want to have a
black-box radio.

Hello Steve, et al ...

I am not familiar with your shortwave receiver, but perhaps you can tell me the
receiver controls on the front.

Most communications receivers will have certain circuit designs that will prevent
"overload", such as an automatic gain control [AGC] which automatically
attenuates large amounts of radio frequency [RF] energy entering the first stage
of your tuned circuits. If your receiver does have an AGC switch, try turning this
circuit in the on position and see if there is any difference.

Good communications receivers will have one to two stages of RF amplification
circuits which are designed for selectivity. These circuits are manually controlled
by a control on the front of the receiver called an RF control. By decreasing the
RF control you will decrease the amount of RF amplification and bring back the
selectivity to the front-end stages. Look in your instruction manual and see what
your Intermod-Distortion [IMD] specifications are. This is the ability of your
tuned circuits to reject received signals from heterodyning with the local oscillator
[LO] during the mixing stage.

After you have read your manual and are satisfied with the ability to control your
receiver correctly, I will be happy to suggest various external wide-band antennas
that are simple to construct.

5448. A Jewish Confession

Newsgroup: rec.radio.shortwave
Date: 2005-03-30 18:33:48 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <114ls8a91cqr6a6@corp.supernews.com>
Source record: 14836

Pastor Peters preached a sermon this morning on 9985 entitled "The Inadvertent Confession of a Jew" and it came in LOUD and CLEAR. That was at 09:00 EST / 14:00 UTC. However, at 12:00 noon EST / 17:00 UTC there just happened to be a very strong station on 12.155 which interfered greatly with 12.160 where Pastor Pete was broadcasting. This message will repeat at 11:00 PM | 23:00 EST / 04:00 UT on 5.070 MHz and here's betting it will probably provide very poor reception. We'll see! :-) He will probably be on live an hour before that, also at 5070 KHz, and it is possible he'll be taking live call-in comments and/or questions -- possibly about this very program.

Anyway, just in case you are unable to receive it clearly tonight you may want to download the file at http://www.scripturesforamerica.org

I just checked and it is not posted, only through the 25th. It may be a few days before this program is posted. Check in a few days at http://www.scripturesforamerica.org/archives/past-archives/03-2005.asp and you'll be able to choose to download or listen to the file in three different formats; Real Media, Windows Media, or MP3 Media.

This sermon is an analysis of an interview with a Jew who works with "Jews For The Preservation of Firearms" and it is amazing what he acknowledges, both by what he says and what he fails to say. Oh, I believe it may have also been a fund raising event.

Don't forget. This is not some "BS" that someone else allegedly said about Jews. THESE ARE THE WORDS OF A JEW, ABOUT JEWS.

SOME VERY INTERESTING STATEMENTS! I suggest you all download the file as soon as it is available online. This was also made into a booklet. I think Pastor Pete said it was about $5 for the tape and he'd send the book, by the same title, for an offering of two or three dollars.

Title of both: The Inadvertent Confessions of a Jew

Specify book, tape, or both. Download free from internet. Any you *may* be able to specify that you receive it on CD.

> OMG your promoting the sale of an Icom IC-R75 Receiver.

Well, not promoting exactly, but if one could get it at the original asking
price it would be a good deal just by simply seling off the bits seperately.

Yes, you Lloyd Davies

There are no Daleks under your command 'tard boy. You have been a failure in everything you have ever done, PERIOD!

You are indeed "pale" you never venture forth outside except for your minimum wage "job," and to buy more light beer.

You need to seriously take a long hard look at yourself in a properly lit mirror and then take action. Lose weight, get mental help, stay off the computer for hours on end and face reality. You are 31 years of age, you deliver pizzas, you play with dolls, you get drunk and spew your filth and delusions on here and usenet. Nobody, I repeat, nobody except for a couple of geeks like yourself can stand you.

You need to either kill yourself or get help, that's it, do it!

I want to thank you for your opinions so far. I wanted to clarify something I mentioned earlier. I have looked at all of the options everyone has mentioned, such as the Sony and the Degan,but I came to the conclusion, based on what I will be using it for (which wouldn't be too much), that either one of these would fit my needs. As for other portables, I've looked into other portables, I'd just like to know about these two from anyone who has them. :-)

I'd like to hear some more opinions about these two radios from anyone who has either of them or both. Thanks again.

Jim.

I'm an estate sale junkie of sorts and have found a few interesting old radios just waiting for a new owner.

One was a Lafayette KT340 bandspread tube receiver with a Q multiplier. I think it was actually made by National of Japan. Picked it up mostly because I remembered my Dad's old Hammarlund 180 had a Q multiplier. Now that KT340 was good for a lot of knob twirling.

The Sony ICF5900 was found stuffed with it's power supply in an oversized ziploc baggie. Without knowing what it was I grabbed it for $10.00 and had to learn the crystal marker the hard way.

Stay away from them selecatennas,they are no good at all.I know! I once bought one from www.ccrane.com (ccrane is a RIPP OFF) and I bought two radios from ccrane too.(That was about seven years ago) The first radio I bought from ccrane when I also bought a selectatenna (the selectatenna I bought back then cost about $57.00 and it did NOT work at all!) was the one those kooks Art Bell and George Noory tout so much,the Sangean one that has AM/FM/TV/Weather bands,it cost about $164.00 (a cheap piece of over rated over priced piece of no good JUNK!) and I bought a Sangean ATS 909 shortwave radio too.(another piece of over rated over priced piece of junk!) I sent that JUNK! back to ccrane company.(By the way,those Sangean radios are real good at loseing the digital displays on them,or so I have read more than a few times before) I have never owned a Sony 7600 GR radio before,but from what I have read about them,I think next month,I am going to buy one from J&R.

Hi Ken,

Yes, I have some experience trying to order this product. Universal Radio is the only North American dealer that carries this product. I reside in Canada, and they refused to sell one to me. FedEx Ground would easily ship the antenna, but Universal would not sell it. When I asked why, they refused any explanation. I found them to unreasonable and rude. I have been involved in the hobby for many years, and have purchased from many Canadian and US radio dealers, and Universal gets a big thumbs down from me. I think they feel they have a monopoly on the SW radio sector, and it shows. The reviews I read on the antenna suggested it was a good compromise for space limited situations where noise is an issue. Upon further consideration, I would also look at the Wellbrook products in this respect. The MTA is essentially a helically wound wire with an magnetic balun. Pretty pricey for what it is, but it has its place.

Why should this matter?

As no one Christian can speak for all who call themselves the same, so it is for anyone who calls him- or herself a "Jew." Being Jewish does not make one automatically any sort of expert on Judaism, nor an expert on "Jews" or "Jewishness" (if such a thing can exist) in general.

That is, one individual cannot speak for a whole, even if that whole was easily defined (which is not readily done in a large population.) Do all Jews think alike? Christians?

Asserting that this one man's opinion is more relevant because he is a Jew speaking about Jews is a logical fallacy. Specifically, it is a variation on the "appeal to authority."

Regardless of this one person's pedigree, they are still offering one point of view; their religion has little to say on whether or not that opinion is BS or not.

If I assert that white, middle-class computer programmers who live in medium-sized university towns tend toward violent veganism, should you give my words more weight simply because I happen to be a part of that demographic? Since I listen to short-wave radio, am I now an expert on that demographic, as well?

I grew up Christian and rejected it early on as hurtful superstition. Agree with me or not, that is my opinion. Is it possible that someone who is Jewish could also come up with their own take on Judaism, right or wrong?

Remember, on this group you are going to get all sorts of opinions - some
weird and some plain dead wrong. caveat emptor
I have a GE SRIII and can say without fear or favour that it will be the
most likely to get that faint MW station you are trying for.
I have owned many portables Sony 2010,7600 and various Sangeans, but on AM
MW the GE SRIII stands head and shoulders above the rest for getting that
really faint far off DX on AM MW.

I once got WWKB Buffalo NY on it without an external antenna and that
station is 8,000 miles away from this QTH!
I have only one AM MW station some distance away and the ONLY portable that
can pick up this station with listenable quality is my SRIII

Yes, the knobs are a bit wobbly and the tuning dial is very inaccurate, but
it does not drift and for getting that single station you are after it will
seriously outperform all the other portables on AM MW.

The radio is in great condition (9 out of 10 due to insignificant scratch on display crystal, bottom right side and less than 1/4"...does not interfere with display). I have placed clear shipping tape over the display to further protect it.

The radio works as new and is guaranteed to NOT be DOA. It comes with the original manual and a copy of same in a binder. It also comes with the original power supply, re-chargeable batteries, a hard leather case, a telescopic antenna and a "Scanner Stand". It does not have the MW bar antenna (said to be ineffective anyway, although still available from AOR USA).

$350.00 + shipping or will trade for a GOOD shortwave receiver.

Please email direct if interested.

John, thecop@optonline.net

Jim,

I have owned both the GE SRIII and the Grundig S350. After receiving the Grundig S350, I sold the GE.

The Grundig S350 is fantastic, ESPECIALLY on the low end of the AM (medium wave) band. Exceptional sensitivity AND selectivity. I live in central California and wanted to get 610 KFRC from San Francisco, about 200 miles from me. The S350 beat everything else I have, including the Grundig Satellit 800, the Panasonic RF-2200, the CCRadio, and the GE SRIII. The SR350 was the only one that could eliminate a strong signal from 620, and could normally due it even with the wide band filter by rotating the radio. When conditions are such that the wide filter doesn't eliminate all of 620, I merely use the narrow filter. Although the Satellit 800 could eliminate signals on 620 by using selectable sideband sync detection, sensitivity wasn't good enough without using an external antenna.

After receiving the S350 I not only sold the GE, but also sold the Panasonic RF-2200 as the S350 proved to produce better reception except on FM. The Panasonic really shines on FM.

The Grundig S350 is also very sensitive on FM. Not as selective as I would like, but it still beats the SRIII.

The dial on the SRIII was way off on my set. I much prefer the S350 digital readout, which I find on my set to be exactly as it shows. Drift on MW is minimal.

The GE, with it's larger and two-speaker system, of course has the best sound. But the S350 sounds great for its size.

Sensitivity on the GE and the S350 are probably about the same. But selectivity is much better on the S350. The narrow bandwidth really works great on both MW and SW.

The S350 does overload on strong signals, but it has a variable RF control. I have found you need patience when using the RF control as you can also eliminate a lot of interference using it.

The S350 is on sale at NormThompson.com for $74.50. It is the best buy I've ever made on a radio (I paid the full retail price), and I might mention it is a lot of fun to play with. I use the alarm feature on the radio which really comes in handy.

There is NO question in my mind -- the Grundig S350 is TOPS for the price. Even beats the Grundig YB400 on shortwave because the S350 has

a near zero noise level, so signals covered up with hissing sounds on the YB400 are crystal clear on the S350.

Actually, I enjoy building and repairing the radios more then
listening to them these days. I have severe tinitus so I have to have
the volume quite high to listen to fading signals. I loved to sit up
all night and listen to international broadcast when i was a teenager,
but that was a long time ago. Still, you haven't explained why I should
subscribe to a service I don't need, or want. I looked at both XM and
Sirius and I wasn't impressed by either. As far as Satellite radio, I
built a C-band satellite system 15 years ago to listen to the radio
stations carried a SCPC or subcarrier on the TV satellites. Have you
ever built a radio and had the joy of hearing that first far away
signal? How about the pure satisfaction of building a commercial
station and transmitting the first signal? Or have you only opened a
box and turned on someone else's idea of a radio? In other words, there
is nothing wrong with my disposition, just that you want me to do things
your way and it just won't happen.

As far as new technology? I've worked on and built commercial radios
you'll probably never see. Some of them will be used to track the
recently announced space probe to Pluto. I learned to solder at eight
when I built my first radio kit. I was hooked. At 13 I was working
part time in a radio and TV shop repairing radios to make money to buy
tools to build more radios.

So cancel your offer right NOW! :-)
Everybody must have been thinking you were flooded with offers.....

Just sell the optional boards separately or put them on ebay.
I bet you will get a least 400US$ for the "naked" 525 easily as it still comes with the additional superb 1khz filter.
I was very lucky when I got the chance to get the RS232-board some years ago from a nice guy in the US for US$100 with the cable and a nice DOS program to remote control the 525. There are several programs out there since then....

[sigh], Well, Al, at least you're trying to be on topic when you spew
forth your tauroscatological nonsense. Were it not for the dates,
times and frequency, you'd be wasting the bandwidth again.

How much DXing do you do exactly? Is your only attraction to radio
that you can use it to disrupt and cause discontent in the groups?
More's the pity!

When's the last time you listened to a weak distant signal, trying to
determine what it was? Sir, I doubt you ever have.

The FAQ was posted a few days ago, and while it is pretty generous in
what is allowed in here, your posts are just an abuse of the system.
I know I don't speak for everyone, but I don't think very many of us
at all are interested in listening to religious zealots. Especially
those who foment racial and religious intolerance!

Well...unless you're in Indiana, Arizona or Hawaii....then the time REALLY
gets confusing...

Indiana had a chance to adopt DST and join the rest of the world this year,
but for other reasons the Indiana General Assembly decided to not meet and
vote on anything this year, allowing over 300 Bills to die of old age.

Indiana - We're 46th in SAT's, 46th in # of college grads, and we suck.

Is it possible, that by "rumbling" he means a loud buzzing from DC to daylight? If this is the case, I would look at electrical interference. Likely culprits could include pole-mounted utility transformers (pole pigs), poorly filtered compressors on AC and refrigerator units, or any running electric motors.

Steve, you might check around and see if shutting any of these local things off stops a lot of the "rumbling."

Among other things, like not working as promised. BPL doesn't deliver the blazing fast internet speeds that it promises, and once technology advances it won't be that great for managing a power grid. (By the way, I thought most power grids were ALREADY in large part automated?)

Does your definition of the way "reasonable people" would behave
include harrassment and intimidation of someone and their family if
you don't like them?

This is a shared frequency for maritime simplex. Along with 12353, 12356,
12362 and 12365.

Mark.
Auckland.

Over five years ago,I did a search for Tom T. Hall Music on the internet.One of the sites at that search I did was about some folks sitting on an Island somewhere (I don't remember where) and they were talking about computer encryption useing photons of light.Photons of light that are designed to spin to the left and spin to the right.(X's and 0's,so to speak) The idea of what they were talking about is computer encryption and data transmissions that is absolutely unhackable.Check out www.softwar.net I don't know if that PCypher light thingy is the same thing,but I am going to buy one for my computer.

Exactly - this is a personal, family issue and has no business in the media
or any poll - period!

5509. BBC using British pounds over US Dollars

Newsgroup: rec.radio.shortwave
Date: 2005-03-31 01:30:59 UTC

Source record: 15046

Is it just me or has the BBC stated anouncing money in British Pounds instead of US dollars? Is this related to the dollars decline? I don't know the conversion factor of Pound Sterling to Canadia dollars off the top of my head but I do know that 1 US dollar equals 0.83 Canadian dollars.
